Chemical Mixtures and Combined Chemical and Nonchemical Stressors - Cynthia V. Rider 2018-02-16

In this book, both basic and advanced concepts are discussed for considering mixtures from initial exposure characterization through evaluation of risk associated with combined exposures. This book will provide an introduction to key issues and multiple options for evaluating both the toxicity of mixtures as well as the risk associated with exposure to mixtures. Additionally, promising tools adapted from other disciplines will be discussed in the context of mixtures toxicology and risk assessment. Finally, the discussion will move beyond chemical mixtures to address incorporating non-chemical stressors into toxicity studies and cumulative risk assessments. Although exposure to multiple chemical and non-chemical stressors is the rule, not the exception, consideration of mixtures in toxicology and risk assessment continues to be a significant challenge. This book will be an essential resource for researchers and professionals in the fields of toxicology, epidemiology, exposure science, risk assessment, and statistics.

*Pain Management and the Opioid Epidemic* - National Academies of Sciences, Engineering, and Medicine 2017-10-28

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

Budget and Economic Outlook: Fiscal Years 2008 to 2018 - 2008

The Congressional Budget Office (CBO) projects that after three years of declining budget deficits, a slowing economy this year will contribute to an increase in the deficit. Under an assumption that current laws and policies do not change, CBO projects that the budget deficit will rise to 1.5 percent of gross domestic product (GDP) in 2008 from 1.2 percent in 2007 (see Summary Table 1). Enactment of legislation to provide economic stimulus or additional funding for military operations in Iraq and Afghanistan could further increase the deficit for this year. The state of the economy is particularly uncertain at the moment. The pace of economic growth slowed in 2007, and there are strong indications that it will slacken further in 2008. In CBO's view, the ongoing problems in the housing and financial markets and the high price of oil will curb spending by households and businesses this year and trim the growth of GDP. Although recent data suggest that the probability of a recession in 2008 has increased, CBO does not expect the slowdown in economic growth to be large enough to register as a recession. 1 Economic performance worse than that suggested in CBO's forecast could significantly decrease projected revenues and

increase projected spending. Furthermore, policy changes intended to mitigate the economic slowdown would, by design, tend to increase the budget deficit in the short term.

**Preparing for Future Products of Biotechnology** - National Academies of Sciences, Engineering, and Medicine 2017-06-28

Between 1973 and 2016, the ways to manipulate DNA to endow new characteristics in an organism (that is, biotechnology) have advanced, enabling the development of products that were not previously possible. What will

the likely future products of biotechnology be over the next 5-10 years? What scientific capabilities, tools, and/or expertise may be needed by the regulatory agencies to ensure they make efficient and sound evaluations of the likely future products of biotechnology? Preparing for Future Products of Biotechnology analyzes the future landscape of biotechnology products and seeks to inform forthcoming policy making. This report identifies potential new risks and frameworks for risk assessment and areas in which the risks or lack of risks relating to the products of biotechnology are well understood.
