Granular Computing Based Machine Learning - Han Liu
2017-11-04

This book explores the significant role of granular computing in advancing machine learning towards in-depth processing of big data. It begins by introducing the main characteristics of big data, i.e., the five Vs—Volume, Velocity, Variety, Veracity and Variability. The book explores granular computing as a response to the fact that learning tasks have become increasingly more complex due to the vast and rapid increase in the size of data, and that traditional machine learning has proven too shallow to adequately deal with big data. Some popular types of traditional machine learning are presented in terms of their key features and limitations in the context of big data. Further, the book discusses why granular-computing-based machine learning is called for, and demonstrates how granular computing concepts can be used in different ways to advance machine learning for big data processing. Several case studies involving big data are presented by using biomedical data and sentiment data, in order to show the advances

in big data processing through the shift from traditional machine learning to granular-computing-based machine learning. Finally, the book stresses the theoretical significance, practical importance, methodological impact and philosophical aspects of granular-computing-based machine learning, and suggests several further directions for advancing machine learning to fit the needs of modern industries. This book is aimed at PhD students, postdoctoral researchers and academics who are actively involved in fundamental research on machine learning or applied research on data mining and knowledge discovery, sentiment analysis, pattern recognition, image processing, computer vision and big data analytics. It will also benefit a broader audience of researchers and practitioners who are actively engaged in the research and development of intelligent systems.

Career Development and Systems Theory - Wendy Patton
2014-05-12

Career Development and Systems Theory: Connecting Theory and Practice offers practitioners, researchers and

students a comprehensive introduction to, and overview of, career theory; introduces the Systems Theory Framework of career development; and demonstrates its considerable contemporary and innovative application to practice. A number of authors have identified the framework as one of a small number of significant innovations in the career development literature. The Systems Theory Framework of career development was developed to provide coherence to the career development field by providing a comprehensive conceptualisation of the many existing theories and concepts relevant to understanding career development. It is not designed to be a theory of career development; rather systems theory is introduced as the basis for an overarching, or metatheoretical, framework within which all concepts of career development, described in the plethora of career theories, can be usefully positioned and utilised in both theory and practice. It has been applied to the career development of children, adolescents and women. Since its first publication, the Systems Theory Framework has been the basis of numerous publications focusing on theoretical application and integration, practice and research, with a growing number of these by authors other than the framework developers. Its application across cultures also has been emphasised. The theoretical and practical unity of the Systems Theory Framework makes this book a worthy addition to the professional libraries of practitioners, researchers and students, new to, or experienced in, the field of career development.

Handbook of Innovative Career Counselling - Jacobus G. Maree 2019-07-20

This book examines a topic widely regarded as the most pressing in career counselling today, i.e., how to

ensure that everyone receives career counselling and that all workers have the opportunity to engage in sustainable, decent work. The author holds that career counselling should not only advance workers' self- and career construction, helping them design successful career-lives and make social contributions, and live purposeful lives – it should also expound new theoretical approaches and interventions. Furthermore, the book criticizes global society for overlooking the basic needs of many workers, especially the most vulnerable and disadvantaged. An important feature of the book is its emphasis on promoting a creative and innovative approach to career counselling so as to better answer contemporary career-related questions. It offers guidance on how to advance entrepreneurship and help workers develop critical thinking, curiosity, creativity, collaboration, and communication skills. In this way the book promotes innovation in career counselling and maps the way forward in a theoretical and practical manner that helps clients 'flourish' rather than merely 'survive' in turbulent times impacted by the fourth wave in psychology, career counselling, the economy, as well as the 4th industrial revolution (Work 4.0).

Now more than a decade later, these programs continue to be developed. Essays written by librarians of color who participated in residency programs, and administrators whose institutions made the programs possible, remind us of the continuing need for diversity in academic libraries.

Searching for Authenticity - S. Gayle Baugh 2015-05-01
Volume 2 of the Research in Careers series focuses on the search for authenticity in one's career. Although there has been growing interest in the topic within the popular press, relatively little academic research has been completed on authenticity and careers. Researchers are still refining the concept of authenticity and are just beginning to investigate how it influences the enactment of careers in today's turbulent career landscape. This volume offers the first organized effort on the topic. This volume contains seven chapters which examine the search for authenticity derived from the Kaleidoscope Career Model (Mainiero & Sullivan, 2006). Chapters 1 and 2 present a review of the literature and an in-depth analysis of the construct of authenticity. Chapter 1 offers a new lens to view career authenticity based on two dimensions of self-awareness and adaptability. Chapter 2 uses two case studies to define how individuals are authentic in their career. Chapters 3 and 4 examine the authenticity of individuals in different career stages, with Chapter 3 examining recent college graduates and Chapter 4 examining mid to late stage careerists. Chapters 5, 6 and 7 focus on the interplay between social interactions and career authenticity. Chapter 5 offers a process model that traces how, through negotiation, a person's identities shape and are shaped by relationships with others, leading to the enactment of an authentic career. Chapter 6 explores how individuals remain authentic in their

career while negotiating the conflicting expectations of multiple interest groups. Chapter 7 examines the complex relationships among career authenticity, political behaviors, and strain.

Careers in Theory and Experience - Warren D. Gribbons 1983-01-01

This study focuses on the Jacobites (Syrian Orthodox Christians), who, like their Aramaean ancestors, established a presence far beyond their ancestral lands. Professor John Joseph has found this historic Christian community to be an admirable case study in inter-communal relations in the Middle East. Of special interest is the discussion of how Western religious rivalries, Catholic and Protestant, have affected the religious tensions in the Middle East. Through Joseph's first-hand acquaintance with the region and mastery of previously unmined sources, he displays an intimate and thorough knowledge of his subject. Written with color, clarity, and extreme care, the book offers an objective recounting of a story that is at times full of passion and violence.

Maintaining Focus, Energy, and Options Over the Career - S. Gayle Baugh 2009-07-01

The first volume of the series, *Maintaining Focus, Energy, and Options Over the Career*, examines how individuals enact and keep their career vital over their work life. Awarding-winning, internationally renowned researchers, including Daniel Feldman, Jennifer Deal, Phyllis Tharenou, and Terry Beehr examine the dynamic nature of contemporary careers and how careers change as individuals change in response to such factors as aging, learning, experience or contextual changes. Volume 1 includes theoretical perspectives on maintaining person-environment "fit" over the course of the career, the shifting constellation of developmental relationships over time and place, a new framework for examining midcareer renewal, a reconceptualization of the retirement transition, and potential gender differences in self-initiated international careers. Empirical studies in volume 1 examine provocative questions including: Is the traditional career really dead? Are there significant generational differences in learning and development? Can career plateauing be positive for the individual or the organization? The focus throughout this volume is on how careers unfold over time and how individuals remain productive and successful as they navigate career changes.

The Effects of Career Development on Employment and Recidivism Among Juvenile Offenders - Leendert Roos
2006-06-05

A major failure of the juvenile justice system is to provide youth with career development skills that will ensure their successful entry into the workforce and reduce recidivism. This study had two purposes, which were to first examine the impact of career development on the formation of mature attitudes and competencies for realistic career decision-making for incarcerated youthful offenders, and second to determine the likelihood of gaining employment and the probability of recidivism for this population from participation in career development. A random sample (N = 50) was selected from a population of incarcerated youth offenders, approximately half of which participated in an employment program. The Career Maturity Inventory (CMI) was administered to both groups as pre- and

posttests to measure the development of mature attitudes and competencies for realistic career decision-making. Logistic regression analysis was used to test the relationship between 6-month and one-year recidivism and employment with career development training in a sample of 1500 youth assigned to an incarceration facility. The first portion of the study did not produce significant differences from the two t test analysis, however, descriptive differences were noted between the groups. Regression analyses demonstrated that youth participating in a career development program were more likely to be employed at 6 months and one year post-intervention; however, there was no difference in recidivism. While the study had mixed results, this research enriches the ability of juvenile justice officials to prepare juvenile offenders for productive lives through career development programs; thus, increases in employment rates for youthful offenders represents a return on investment for the community.
