**Oculoplastic Surgery Atlas** - Geoffrey J. Gladstone 2005-12-06

The desire to teach and the fulfillment attained from teaching have again prompted us to produce a work that we hope is both useful and enlightening to our readers. The field of oculoplastic surgery has grown and evolved to include all aspects of eyelid and facial plastic surgery. Our literature must now reflect the advancements and - rection of our field. Knowledge of anatomy, the basis of all surgery and the root of surgical principles and techniques, supports our ab- ity to deliver the highest quality care to our patients. We have therefore combined text and diagrams and supplemented them with DVD digital video technology to enable those who wish to perform this surgery the best possible instruction and preparation. We hope that our attempts to accomplish this will be rewarded by the use of this material by

colleagues and the acknowledgment of our unique and logical progression in the field of eyelid and facial pl- tic surgery. The previous volume in this series covered reconstructive eyelid surgery. This volume presents many aspects of facial cosmetic surgery, including blepharoplasty, endoscopic forehead surgery, rhytidectomy, and other related procedures. Future volumes will pr- ent facets of lacrimal and orbital surgery. Frank A. Nesi, MD vii ACKNOWLEDGMENTS Bringing a book project to fruition is always a complicated process involving many people. It is through their dedication, profession- ism, and team effort that it all comes together.

Written for ophthalmology specialists and residents, this new edition presents many aspects of facial cosmetic surgery, including blepharoplasty, endoscopic forehead surgery, rhytidectomy, and soft tissue and lip augmentation. Review of the previous edition: "The book offers insight into the possibilities and technology of modern aesthetic cosmetic surgery in the face region. ... The book can be recommended for the aesthetic surgeon and for ophthalmologists. ... **Textbook of Laser and Light Dermatology in the Asian Skin** - Yong-Kwang Tay 2011-03-28

Laser has been used in dermatology for over four decades. The concept of selective photothermolysis has transformed our understanding of laser tissue interactions, and there has been an explosive interest in laser treatment for both skin diseases and aesthetic indications over the past decade or more. Asian skin differs from Caucasian skin because of the higher amount of epidermal melanosomes and the higher level of melanin production. Laser- and light-based procedures in darker skin types have a significantly higher risk of complications, including scarring and pigmentary changes as compared with lighter skin types. This book has been highly anticipated as there are not many titles addressing these issues in Asian skin. It includes effective treatment paradigms as well as advice on complications and how to treat them. The book reflects the tremendous progress in the field of laser dermatology. The contributors to this textbook are clinicians with extensive experience in treating Asian skin. The book offers a comprehensive guide to treatment of Asian skin and will be of great value to dermatologists, plastic surgeons, pediatricians and general practitioners, who will benefit from the clinical wisdom that has been distilled from the extensive experience of the editors and contributors. Foreword Foreword (72 KB) Contents: Laser and Light-Tissue Interactions (M Ee) Laser Safety (S-N Wong) Carbon Dioxide Laser Surgery in the Asian Skin (C Kwok) Vascular Lasers in the Asian Skin (Y-C Chan) Treatment of Pigmented Lesions in the Asian Skin (Y-K Tay) Laser Treatment of Tattoos (E Tan) Laser Hair Removal in the Asian Skin (R S-P Lim) Ablative Laser Resurfacing in the Asian Skin (C-L Goh) Nonablative Laser Photorejuvenation in the Asian Skin (Por-Ang) Fractionated Lasers in the Asian Skin (S-H Chua) Intense Pulsed Light Devices in the Asian Skin (J T-E Lim) Photodynamic Therapy in the Asian Skin (C T-S Theng) Readership: Dermatologists, dermatology trainees and general practitioners. **Simply Local Flaps** - Michael F. Klaassen 2018-02-26

This book provides a useful framework for categorizing local flaps on the basis of their composition, blood supply, geometry and means of transfer. The initial chapters are dedicated to the fundamentals – the basic procedures, how to get started, and technical tips – as well as advice on wound care and scar management. These practical pointers are essential for students of plastic surgery, while also offering helpful refreshers for experienced practitioners. The subsequent chapters describe the types of flaps that are traditionally taught and the 10 most common flaps. There is also a practical guide to W-plasty, Z-plasty and their various modifications, which can be applied to both scar revision and the closure of the donor sites. The book also discusses the Keystone Perforator Island Flap (KPIF) and its application to various body sites, offering elegant solutions to some very tricky situations. In turn, the book's final chapters are focused on assessment, decision-making and lessons learned – essentially, how to decide if a skin graft is the better choice, matters relating to aesthetics, and dealing with complications. Rather than demonstrate exactly how to execute flaps, the book's primary goal is to inspire students and trainees to think about the reconstructive problem, consider all patient-related and anatomical factors, and accurately recognize what can feasibly be achieved.
