*Leonardo Pisano (Fibonacci)* - L. E. Sigler 2014-06-28

The Book of Squares by Fibonacci is a gem in the mathematical literature and one of the most important mathematical treatises written in the Middle Ages. It is a collection of theorems on indeterminate analysis and equations of second degree which yield, among other results, a

solution to a problem proposed by Master John of Palermo to Leonardo at the Court of Frederick II. The book was dedicated and presented to the Emperor at Pisa in 1225. Dating back to the 13th century the book exhibits the early and continued fascination of men with our number system and the relationship among numbers with special properties such as prime numbers, squares, and odd numbers. The faithful translation into modern English and the commentary by the translator make this book accessible to professional mathematicians and amateurs who have always been intrigued by the lure of our number system.

**Minority Education - Tove Skutnabb-Kangas 1988**  
In both Europe and North America during the past 20 years, controversy has surrounded the education of children from linguistic minority backgrounds. An increasing number of minority children are experiencing difficulties at school and many leave school with no formal qualifications. There are fears among many educators and policy-makers that an entire generation of alienated youth with no future prospects is being produced by western educational systems. This book analyses policy issues regarding the education of minority students in western

industrialised societies and presents a number of case studies of programs that have been successful in reversing the pattern of minority students' academic failure. A central theme throughout the volume is that the causes of minority students' academic difficulties are rooted in the power relations between the dominant and subordinate groups in society. Schools have typically reflected and reinforced these power relations through strategies such as punishment of children for speaking their mother tongue at school with the result that minority students have not developed confidence in their own cultural

identity or academic abilities. Reversal of minority students' school failure requires that educators set out to enable both minority students and communities to empower themselves. The presentation of case studies in which this empowerment has been successfully achieved is complemented by the perspectives of individuals and minority communities who have been involved in the struggle for educational and linguistic rights of minority children.
