A second crucial question is whether wetland depletion and conversion to agricultural cropland has been excessive. This title will be of interest to students of Environmental Economics and Policy.

It encourages students to systematically investigate scenarios with appropriate positive and normative tools. The book emphasizes the importance of employing critical thinking skills to address the complexities associated with the design and implementation of twenty-first-century agricultural and food policies. Students are asked to suspend their personal opinions and emotions, and instead apply research methods that require the careful consideration of both facts and values. The opportunities to build these investigative skills are abundant when we consider the diversity of modern agricultural and food policy concerns. Featuring case studies and critical thinking exercises throughout and supported by a Companion Website with slides, a test bank, glossary, and web/video links, this is the ideal textbook for any agricultural policy class.
