FAQ 3 -

This new Super-Book, like its predecessors in this same series of technical manuals

called “FAQ”, is dedicated to modeling military vehicles and the techniques used for assembling, painting and weathering. The difference with the previous book is that we have moved on in the timeframe and this book is a complement of the previous ones. It also explains some new techniques that have appeared these last years, mainly to use in modern vehicles but that can be also used in vehicles of all eras. The most complete book for military vehicles edited until now. The materials that make up modern vehicles and weapons have changed considerably since World War II. Materials that were out of the question on a technological and industrial level back then are now commonplace. The use of these new materials and the manufacturing and assembly methods reflect on the way we paint and weather these models; they require a different approach. Like many other things in life, in the end the purpose is

to take up new challenges. In this book we present some of those challenges. Simply essential for the modeller of military vehicles

[Scale Car Modelling](#) - Mat Irvine 2012-05-01

Cars have always appealed as model subjects as - unlike aeroplanes or military subjects - the real thing is likely to be sitting outside the modeller's house. From the first

car kits produced in the early 1950s, mainly dominated by American machinery, we now have a choice of automotive examples from around the world. The joint scale of 1:24/1:25 dominates car models, and it is these scales that will mostly be found in this book, from stock builds to race cars to wild customs. In addition, although injection styrene is the main material of choice, there are specialist builds using resin, white metal and photo-etched parts. The book includes detailed step-by-step guides for Building 'out of the box!'; Customs and conversions; Applying decals; Dealing with resin; Wiring and engines; Salvaging old kits; A dented ride for 007; NASA's Hot Road; Dirtying a dirt track racer; An alien homage to Roth.

Ship Models from Kits - David Griffith
2011-02-28

In the past thirty years the world of model kits has undergone a veritable revolution. New techniques in injection moulding have

improved the scale accuracy and surface detail of the humble plastic kit, while many specialist companies now produce top-quality resin models, vastly broadening the range of subjects on the market. However, the really radical change has been the advent of photo-etched brass fret, which allows the finest detail to be reproduced to scale. In ship modelling, this has resulted in a new form of the hobby, mid-way between traditional build-from-the-box simplicity and the time-consuming demands of fabricating everything from scratch. These new materials have prompted innovative techniques, which are comprehensively demonstrated in this new manual. Designed for those wishing to achieve the best results from their ship kits in the 1:700 to 1:350 range of scales, it uses step by step photographs to take the reader through the building of two models, one in plastic and one in resin, from basic construction, fittings

and detailing, to painting, finishing and display. Written by a highly experienced, award-winning ship modeller, the book is a showcase for the contemporary approach to the hobby.
