Taking Flight - National Research Council 1997-03-14
The commercial aviation industry is a major part of the U.S. transportation infrastructure and a key contributor to the nation's economy. The industry is facing the effects of a reduced role by the military as a source of high-quality trained personnel, particularly pilots and mechanics. At the same time, it is facing the challenges of a changing American workforce. This book is a study of the civilian training and education programs needed to satisfy the work-force requirements of the commercial aviation industry in the year 2000 and beyond, with particular emphasis on issues related to access to aviation careers by women and minorities.

Brown Bag Lessons - Don Alexander 2012
Brown Bag Lessons, The Magic of Bullet Writing centers on effective bullet writing and guarantees immediate improvement. Skillful writing doesn't have to be difficult. No other book approaches writing the way this book does, and no other book teaches these techniques. After reading this book, you will fully understand how to write strong bullets and "why" every word matters. In

2003 the author created a seminar to teach a fair and consistent process to evaluate recognition packages. This seminar transformed an entire organization within six months. Since then, the techniques have decisively transformed the writing, recognition, and promotions of every organization applying them. The practices in this book continue to positively impact the Air Force and sister services through professional military education. In addition, the concepts have helped transitioning service members and college students better communicate acquired capabilities and competencies on their résumés. Read on to discover the "magic" and open your eyes to a brand new way to look at writing. The US Air Force promotion system emphasizes the importance of documenting your very best accomplishments. Under this system, promotion comes from the most recent performance reports, so Airmen must communicate the best accomplishments and not just words that fill the white space. This Magic of Bullet Writing will ensure you know how to articulate not just what you are doing but also convey your strongest competencies and capabilities so the promotion board can fully assess your readiness for promotion. Training materials that correspond to the lessons in this book are available for free download at <http://www.brownbaglessons.com>. Are you ready for the magic?

Take Charge of Your Aviation Career - John Williams
2012-12

When I entered the aviation industry many years ago. No one sat me down and explained what I was getting myself into from a real world perspective. There was one person I knew was in the industry and he worked nights and was very difficult to connect with. In short, I was clueless. I made grave mistakes and sometimes took real, once-in-a-lifetime opportunities, for granted. I also missed some opportunities because I was not prepared. After you graduate aviation school, you are going to want to have a full picture of your future. If you are currently in the industry and have been for about 5 years, you will still need this information to successfully fine-tune your career. This book will help prepare you for a successful aviation maintenance career. It gives a good "insider's" perspective of the aviation maintenance industry that most would have to work in the industry to get. It sums up what "good" mechanics should know about their profession. It will help you avoid the mistakes that I made thereby improve your chances of success. Do you want to know more about contracting? Do you know what contracting is? What are the benefits and disadvantages versus working with a major carrier? Having information that you can apply is the best tool you can have when it comes to your career. I am an FAA Licensed Aircraft Mechanic of 25 years and have held positions such as: Aircraft Mechanic, Aircraft Maintenance Supervisor, Site Lead, Install Manager, Regional Manager, Maintenance Representative, Flight Engineer, Process Improvement Manager, and Aircraft Inspector, Through my career experiences, I feel I have very important information to

share with the many professionals in the aviation maintenance industry. For example: in our industry, there are occupational basics and personal basics. Do you know what they are and if so, do you meet them all on a daily basis? Making sure that you do will improve your chances for better opportunities and promotion, at the very least will separate you from the pack. Is aviation management one of your goals? It could be somewhat difficult to break into but also very lucrative. I share key information that will guide you into that direction. Do you set professional and personal goals for yourself? If so, do you update them on a yearly basis? Are you measuring your progress? People who grow and achieve in their careers are intentional. There are tools in the book that I share that will help you. Do you interview well? You will after reading some of the tips that I share after having failed miserably. Finally, I have included a reading list that will elevate the way you approach your job. Your personal and career success has 80% to do with your attitude and the thoughts that you think. This list is a valuable resource. Most of these titles also come in an audio format so you can listen as you drive to and from work. "Take Charge of Your Aviation Career" is a great tool to add for your career.
