Impact of Future Aircombat Characteristics on Pilot Performance and Cockpit Design - K. D. Richter 1984

Future medium- and short-range weapons are expected to change aircombat characteristics significantly. Medium-range (MR) weapon technology and performance will force a supersonic maneuvering type aircombat with sustained energy as well as highly dynamic character in terms of climb/descent rates and spatial position changes. All-aspect capabilities of new short-range (SR) weapons will establish their employment from head-on, at least frontal hemisphere positions. The SR-aircombat is characterized by instantaneous maneuvering and is drifting to lower speeds and lower loadfactor levels. The MR head-down aircombat is expected to influence pilot performance to a large degree and pose problems concerning; spatial disorientation; manual versus automatic maneuvering, degree of automation; aircraft performance monitoring and mental processing of tactical situation information. Solution requirements are postulated to divide human and system tasks. System automation and integration is discussed to reduce pilot workload and create a time margin for qualified decision-making. A tactical Information & Command System is discussed and a tactical displays layout proposed.

AIR CRASH INVESTIGATIONS DEATH IN THE POTOMAC The Crash of Air Florida Flight 90 - George Cramoisi, Editor 2012-11-20

On January 13, 1982, Air Florida Flight 90, a Boeing 737-222, was a scheduled flight to Fort Lauderdale, Florida, from Washington National Airport, Washington, D.C. There were 74 passengers and 5 crewmembers on board. The flight was delayed about 1 hour 45 minutes due to a moderate to heavy snowfall. Shortly after takeoff the aircraft crashed at 1601 e.s.t. into the 14th Street Bridge over the Potomac River and plunged into the ice-covered river, 0.75 nmi from the departure end of runway 36. Four passengers and one crewmember survived the crash. Four persons in the vehicles on the bridge were killed; four were injured. The National Transportation Safety Board determines that the probable cause of this accident was the flightcrew's failure to use engine anti-ice during ground operation and takeoff, and to take off with snow/ice on the

airfoil surfaces of the aircraft. Contributing to the accident were the ground delay between de-icing and takeoff clearance.
