*Computational Intelligence and
Healthcare Informatics* - Om Prakash
Jena 2021-10-19

COMPUTATIONAL INTELLIGENCE and
HEALTHCARE INFORMATICS The book
provides the state-of-the-art

innovation, research, design, and implements methodological and algorithmic solutions to data processing problems, designing and analysing evolving trends in health informatics, intelligent disease prediction, and computer-aided diagnosis. Computational intelligence (CI) refers to the ability of computers to accomplish tasks that are normally completed by intelligent beings such as humans and animals. With the rapid advance of technology, artificial intelligence (AI) techniques are being effectively used in the fields of health to improve the efficiency of treatments, avoid the risk of false diagnoses, make therapeutic decisions, and predict the outcome in many clinical scenarios. Modern health treatments are faced with the challenge of

acquiring, analyzing and applying the large amount of knowledge necessary to solve complex problems. Computational intelligence in healthcare mainly uses computer techniques to perform clinical diagnoses and suggest treatments. In the present scenario of computing, CI tools present adaptive mechanisms that permit the understanding of data in difficult and changing environments. The desired results of CI technologies profit medical fields by assembling patients with the same types of diseases or fitness problems so that healthcare facilities can provide effectual treatments. This book starts with the fundamentals of computer intelligence and the techniques and procedures associated with it. Contained in this book are state-of-the-art methods of

computational intelligence and other allied techniques used in the healthcare system, as well as advances in different CI methods that will confront the problem of effective data analysis and storage faced by healthcare institutions. The objective of this book is to provide researchers with a platform encompassing state-of-the-art innovations; research and design; implementation of methodological and algorithmic solutions to data processing problems; and the design and analysis of evolving trends in health informatics, intelligent disease prediction and computer-aided diagnosis. Audience The book is of interest to artificial intelligence and biomedical scientists, researchers, engineers and students in various settings such as

pharmaceutical & biotechnology companies, virtual assistants developing companies, medical imaging & diagnostics centers, wearable device designers, healthcare assistance robot manufacturers, precision medicine testers, hospital management, and researchers working in healthcare system.

GENDER ISSUES - AMITA SAXENA

2019-08-21

Gender inequality and discrimination not only in India, all over world is a multifaceted issue that has been related to both men and women. Some people think gender equality indices place men at a disadvantage, when India's population is surveyed, women are found to be at disadvantage in several ways. These trends are disturbing, as a natural prediction would be that with growth comes education and prosperity the dowry system, involving a cash or in-kind payment from the bride's family to the grooms at the time of marriage, is another institution that disempowered women. It reinforces the inferior status of Indian women and puts them at risk of violence in their marital households. The

normalization of intra-household violence is a huge detriment to the welfare of women. Crimes against women have doubled. Gender inequality extends across various facets of society. Political participation is a key factor to rectify this situation. Gender bias extends to electoral politics and their representative also. The book deals with Population Stabilizing Measure, Juvenile Delinquency, Gender Based Violence, Women Fish Retailers, Gender Inequality, Geriatric Issues in Women and their Management in India, Women's Attitude And The Environment, The Journey of Indian Women across ages, Gender Discrimination in the Workplace, Violence Against Women: dowry system, Women's Role in Developing Technology: Increasing Productivity, Improving Lives, Gender
