How Students Learn - National Research Council 2005-01-28

How Students Learn: Science in the Classroom builds on the discoveries detailed in the best-selling How People Learn. Now these findings are presented in a way that teachers can use immediately, to revitalize their work in the classroom for even greater effectiveness. Organized for utility, the book explores how the principles of learning can be applied in science at three levels: elementary, middle, and high school. Leading educators explain in detail how they developed successful curricula and teaching approaches, presenting strategies that serve as models for curriculum development and classroom instruction. Their recounting of personal teaching experiences lends strength and warmth to this volume. This book discusses how to build straightforward science experiments into true understanding of scientific principles. It also features illustrated suggestions for classroom activities.

Business Bullshit - André Spicer 2017-09-11

Our organizations are flooded with empty talk. We are constantly "going forward" to lands of "deliverables", stopping off on the "journey" to "drill down" into "best practice". Being an expert at using management speak has become more important in corporate life than delivering long lasting results. The upshot is that meaningless corporate jargon is killing our organizations. In this book, management scholar the author argues we need to call this empty talk what it is: bullshit. The book looks at how organizations have become vast machines for manufacturing, distributing and consuming bullshit. It follows how the meaningless language of management has spread through schools, NGOs, politics and

the media. Business Bullshit shows you how to spot business bullshit, considers why it is so popular, and outlines the impact it has on organizations and the people who work there. It also outlines what we can do to minimise bullshit at work. The author makes a case for why organizations need to avoid empty talk and reconnect with core activities.

School and Democracy - Dermeval Saviani 2018

The Nature of Space - Milton Santos 2021-08-06

In The Nature of Space, pioneering Afro-Brazilian geographer Milton Santos attends to globalization writ large and how local and global orders intersect in the construction of space. Santos offers a theory of human space based on relationships between time and ontology. He argues that when geographers consider the inseparability of time and space, they can then transcend fragmented realities and partial truths without trying to theorize their way around them. Based on these premises, Santos examines the role of space, which he defines as indissoluble systems of objects and systems of actions in social processes, while providing a geographic contribution to the production of a critical social theory.

Activist Science and Technology Education - Larry Bencze 2014-06-05

This collection examines issues of agency, power, politics and identity as they relate to science and technology and education, within contemporary settings. Social, economic and ecological critique and reform are examined by numerous contributing authors, from a range of international contexts. These chapters examine pressing pedagogical questions within socio-scientific contexts, including petroleum economies, food justice, health, environmentalism, climate change, social media and biotechnologies. Readers will discover far reaching inquiries into activism as an open question for science and technology education, citizenship and democracy. The authors call on the work of prominent scholars throughout the ages, including Bourdieu, Foucault, Giroux, Jasanoff, Kierkegaard, Marx, Nietzsche, Rancière and Žižek. The application of critical theoretical scholarship to mainstream practices in science and technology education distinguishes this book, and this deep, theoretical treatment is complemented by many grounded, more pragmatic exemplars of activist pedagogies. Practical examples are set within the public sphere, within selected new social movements, and also within more formal institutional settings, including elementary and secondary schools, and higher education. These assembled discussions provide a basis for a more radically reflexive reworking of science and technology education. Educational policy makers, science education scholars, and science and technology educators, amongst others, will find this work thought-provoking, instructive and informative.

Blended - Michael B. Horn 2014-10-27

Navigate the transition to blended learning with this practical field guide Blended is the practical field guide for implementing blended learning techniques in K-12 classrooms. A follow-up to the bestseller Disrupting Class by Clayton M. Christensen, Michael Horn, and Curtis Johnson, this hands-on guide expands upon the blended learning ideas presented in that book to provide practical implementation guidance for educators seeking to incorporate online learning with traditional classroom time. Readers will find a step-by-step framework upon which to build a more student-centered system, along with essential advice that provides the expertise necessary to build the next generation of K-12 learning environments. Leaders, teachers, and other stakeholders will gain valuable insight into the process of using online learning to the greatest benefit of students, while avoiding missteps and potential pitfalls. If online learning has not already rocked your local school, it will soon. Blended learning is one of the hottest trends in education right now, and

educators are clamoring for "how-to" guidance. Blended answers the call by providing detailed information about the strategy, design, and implementation of a successful blended learning program. Discover a useful framework for implementing blended learning Unlock the benefits and mitigate the risks of online learning Find answers to the most commonly asked questions surrounding blended learning Create a more student-centered system that functions as a positive force across grade levels Educators who loved the ideas presented in *Disrupting Class* now have a field guide to making it work in a real-world school, with expert advice for making the transition smoother for students, parents, and teachers alike. For educational leaders seeking more student-centered schools, *Blended* provides the definitive roadmap.

Liquid Love - Zygmunt Bauman 2013-05-03

This book is about the central figure of our contemporary, 'liquid modern' times - the man or woman with no bonds, and particularly with none of the fixed or durable bonds that would allow the effort of self-definition and self-assertion to come to a rest. Having no permanent bonds, the denizen of our liquid modern society must tie whatever bonds they can to engage with others, using their own wits, skill and dedication. But none of these bonds are guaranteed to last. Moreover, they must be tied loosely so that they can be untied again, quickly and as effortlessly as possible, when circumstances change - as they surely will in our liquid modern society, over and over again. The uncanny frailty of human bonds, the feeling of insecurity that frailty inspires, and the conflicting desires to tighten the bonds yet keep them loose, are the principal themes of this important new book by Zygmunt Bauman, one of the most original and influential social thinkers of our time. It will be of great interest to students and scholars in sociology and in the social sciences and humanities generally, and it will appeal to anyone interested in the changing nature of human relationships.

A History of World Agriculture - Marcel Mazoyer 2006-06

Only once we understand the long history of human efforts to draw sustenance from the land can we grasp the nature of the crisis that faces humankind today, as hundreds of millions of people are faced with famine or flight from the land. From Neolithic times through the earliest civilizations of the ancient Near East, in savannahs, river valleys and the terraces created by the Incas in the Andean mountains, an increasing range of agricultural techniques have developed in response to very different conditions. These developments are recounted in this book, with detailed attention to the ways in which plants, animals, soil, climate, and society have interacted. Mazoyer and Roudart's *A History of World Agriculture* is a path-breaking and panoramic work, beginning with the emergence of agriculture after thousands of years in which human societies had depended on hunting and gathering, showing how agricultural techniques developed in the different regions of the world, and how this extraordinary wealth of knowledge, tradition and natural variety is endangered today by global capitalism, as it forces the unequal agrarian heritages of the world to conform to the norms of profit. During the twentieth century, mechanization, motorization and specialization have brought to a halt the pattern of cultural and environmental responses that characterized the global history of agriculture until then. Today a small number of corporations have the capacity to impose the farming methods on the planet that they find most profitable. Mazoyer and Roudart propose an alternative global strategy that can safeguard the economies of the poor countries, reinvigorate the global economy, and create a livable future for mankind.

Visual Tools for Transforming Information Into Knowledge - David Hyerle 2008-09-05

"Helps teachers think about what they are doing in the classroom with graphic organizers and how they can use them more effectively." —Mark Johnson, Principal Glenwood Elementary School, Kearney, NE "With an emphasis on transforming information into knowledge, everyone who considers themselves a learner or a facilitator of someone else's learning would benefit from the author's message and ideas." —Judith A. Rogers, Professional Learning Specialist Tucson Unified School District, AZ Develop students' thinking, note-taking, and study skills with powerful visual tools! Visual tools have the unique capacity to communicate rich patterns of thinking and help students take control of their own learning. This second edition of *A Field Guide to Using Visual Tools* shows teachers of all grades and disciplines how to use these tools to improve instruction and generate significant positive changes in students' cognitive development and classroom performance. Expert David Hyerle describes three basic types of visual tools: brainstorming webs that nurture creativity, graphic organizers that build analytical skills and help process specific content, and concept maps that promote cognitive development and critical thinking. Updated with new research and applications for three kinds of Thinking Maps®, this essential resource: Expands teacher skills with practical guides for using each type of tool Presents recent research on effective instructional strategies, reading comprehension, and how the brain works Includes templates, examples, and more than 70 figures that show classroom applications By utilizing these powerful, brain-compatible learning aids, teachers can help students strengthen higher-order thinking skills, master content and conceptual knowledge, and become independent learners!

Music and Mathematics - John Fauvel 2006

From Ancient Greek times, music has been seen as a mathematical art, and the relationship between mathematics and music has fascinated generations. This collection of wide ranging, comprehensive and fully-illustrated papers, authorized by leading scholars, presents the link between these two subjects in a lucid manner that is suitable for students of both subjects, as well as the general reader with an interest in music. Physical, theoretical, physiological, acoustic, compositional and analytical relationships between mathematics and music are unfolded and explored with focus on tuning and temperament, the mathematics of sound, bell-ringing and modern compositional techniques.

A Primer of Visual Literacy - Donis A Dondis 1974-09-15

This primer is designed to teach students the interconnected arts of visual communication. The subject is presented, not as a foreign language, but as a native one that the student "knows" but cannot yet "read." Responding to the need she so clearly perceives, Ms. Dondis, a designer and teacher of broad experience, has provided a beginning text for art and design students and a basic text for all other students; those who do not intend to become artists or designers but who need to acquire the essential skills of understanding visual communication at a time when so much information is being studied and transmitted in non-

verbal modes, especially through photography and film. Understanding through seeing only seems to be an obviously intuitive process. Actually, developing the visual sense is something like learning a language, with its own special alphabet, lexicon, and syntax. People find it necessary to be verbally literate whether they are "writers": or not; they should find it equally necessary to be visually literate, "artists" or not. This primer is designed to teach students the interconnected arts of visual communication. The subject is presented, not as a foreign language, but as a native one that the student "knows" but cannot yet "read." The analogy provides a useful teaching method, in part because it is not overworked or too rigorously applied. This method of learning to see and read visual data has already been proved in practice, in settings ranging from Harlem to suburbia. Appropriately, the book makes some of its most telling points through visual means. Numerous illustrated examples are employed to clarify the basic elements of design (teach an alphabet), to show how they are used in simple syntactic combinations ("See Jane run."), and finally, to present the meaningful synthesis of visual information that is a finished work of art (the apprehension of poetry...).

Claudia Andujar: the Yanomami Struggle - Thyago Nogueira 2020-03-26

This book is published to accompany Claudia Andujar, *The Yanomami Struggle* at the Fondation Cartier pour l'art contemporain, the most ambitious exhibition ever devoted to the Brazilian photographer who since the 1970s has dedicated her life to photography and the protection of the Yanomami Indians, one of the largest Amerindian communities in the Brazilian Amazon. Conceived by Thyago Nogueira for the Instituto Moreira Salles in Brazil, *The Yanomami Struggle* features over 200 black-and-white and color photographs, many of which have never been shown before, as well as an audiovisual installation, historical documents and drawings produced by Yanomami artists. The fruit of several years' research into the photographer's archives, the exhibition reflects the two inseparable aspects of her approach: one aesthetic, the other political. The exhibition also shows Claudia Andujar's significant contribution to photographic art and the essential role she has played and continues to play in the defense of Yanomami rights and the forest in which they live.

Global Education Policy and International Development - Antoni Verger 2013-03-28

Exploring the interplay between globalization, education and international development, this book surveys the impact of global education policies on local policy in developing countries. With chapters written by leading international scholars, drawing on a full range of theoretical perspectives and offering a diverse selection of case studies from Africa, Asia and South America, this book considers such topics as: How are global education agendas and policies formed and implemented? What is the impact of such policy priorities as public-private partnerships, child-centred pedagogies and school-based management? What are the effects of political and economic globalization on educational reform and change? How do mediating institutions affect the translation of global policies to particular educational contexts? What are the limitations of globalised policy solutions and what problems do they encounter at local levels? From students of education, development and globalization to practitioners working in developing contexts, this book is an important resource for those seeking to understand how global forces and local realities meet to shape education policy in the developing world.

The Allegory of the Cave - Plato 2021-01-08

The Allegory of the Cave, or Plato's Cave, was presented by the Greek philosopher Plato in his work *Republic* (514a-520a) to compare "the effect of education (παιδεία) and the lack of it on our nature". It is written as a dialogue between Plato's brother Glaucon and his mentor Socrates, narrated by the latter. The allegory is presented after the analogy of the sun (508b-509c) and the analogy of the divided line (509d-511e). All three are characterized in relation to dialectic at the end of Books VII and VIII (531d-534e). Plato has Socrates describe a group of people who have lived chained to the wall of a cave all of their lives, facing a blank wall. The people watch shadows projected on the wall from objects passing in front of a fire behind them, and give names to these shadows. The shadows are the prisoners' reality.

Teacher Educators as Teachers and as Researchers - Kari Smith 2020-09-11

This book presents recent international research on how teacher educators, institutions and policy makers perceive, act on and experience the dual responsibility that teacher educators are required to develop. Teacher educators are both teachers and researchers, a hybrid position

which might be challenging to fulfil. Teacher education has attracted much research over the years. It has also been subject to national and international debates about its goals and core features as well as issues of quality and effectiveness. More recently, attention has been given to the work, identity and professional development of teacher educators. The various chapters in the book address the topic of teacher educators as teachers and researchers in diverse countries and contexts, namely Australia, Belgium, England, Ireland, Israel, Portugal, Norway and the USA. Collectively, the authors examine the work of teacher educators considering their core mission, their professional development opportunities and the demands and needs of their working contexts. The chapters in this book were originally published in a special issue of the *European Journal of Teacher Education*.

bookdown - Yihui Xie 2016-12-12

bookdown: Authoring Books and Technical Documents with R Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub.

Principles of Physiological Psychology - Wilhelm Max Wundt 1904

History and Truth - Adam Schaff 2014-05-09

History and Truth deals with the epistemological premises and the objectivity of historical truth as well as the social conditioning of historical cognition. Both the problem of the model of cognitive relationship and the problem of truth are discussed in the context of true cognition. Comprised of eight chapters, this book begins with an overview of historians' conflicting interpretations regarding the causes of the French Revolution to highlight the tendency of historians to differ in their visions of the historical process, resulting in different and sometimes even contradictory representations of one and the same fact. The discussion then turns to three models of the process of cognition (the cognitive subject, the object of cognition, and knowledge as the product of the process of cognition), as well as the concept of truth as a philosophical problem. Subsequent chapters focus on two concepts of history, namely, positivism and presentism; The class character of historical cognition; historicism and relativism; and the selection of historical facts. The book also considers why history is continuously written anew before concluding with an assessment of the objectivity of historical truth. This monograph will be of interest to students, practitioners, and researchers in the fields of history, philosophy, and the social sciences.

[The Freedom of the Seas, Or, The Right which Belongs to the Dutch to Take Part in the East Indian Trade](#) - Hugo Grotius 2001

A classic treatise on international maritime law. Originally published: New York: Oxford University Press, 1916. xv, (xiv-xv, 79 pp. paged in duplicate (158 pp.)), 81-83 pp. (total 182 pp.) A translation of Grotius's *Mare Liberum*, with Latin and English on facing pages. This groundbreaking work was commissioned by the Dutch East India Company to dispute the monopoly on East Indian trade routes claimed by the Portuguese. It argues that the seas are international territory open to all nations, thus rejecting the idea that any area of the seas could belong to a country. An instant classic, it received a great deal of attention when it was published in 1609. Perhaps the most important reply is John Selden's *Mare Clausum* (1635), which defends British claims to sovereignty over the coastal waters of the British Isles.

[A Concise History of Brazil](#) - Boris Fausto 2014-08-11

The second edition of *A Concise History of Brazil* features a new chapter

that covers the critical time period from 1990 to the present, focusing on Brazil's increasing global economic importance as well as its continued democratic development.

How Democracy Works - Marcio Goldman 2013

In this book, Marcio Goldman provides an interpretation of a 'big' theme - the functioning of a modern political system - based on the ethnographic analysis of a 'small' one - the political involvement of a group of African-Brazilian people living in the town of Ilheus in the north-east of Brazil, and belonging to Afro-Brazilian religions, black movement factions, families and neighbourhoods. By giving a description 'from the native's point of view' he leads us to a truly anthropological perception of modern democracies, showing how we need to take seriously the actions and the reflections of those generally viewed as passive, manipulated, ignorant and not really interested in the political game. Only this can lead us to an 'ethnographic theory of politics' A ground-breaking work of real importance - not only to the anthropology of politics, but to the continuing development of theory and epistemology in anthropology and the social sciences at large. - Prof. Christina Toren, University of St Andrews Goldman has masterfully analysed the terrain of politics in this town, illuminating not only its local specifics.... but what he calls the 'constitutive ambiguities' of democracy in Brazil - and indeed of democracy as a whole. In the process he robustly challenges various accepted wisdoms about poor people's political choices, gives new life to classic anthropological ideas like 'segmentation', and strips away the veil

that, for many of us, obscures 'how democracy works'. He achieves this ambitious task with consummate skill, combining fine-grained detail with bold theoretical insight.- Prof. Deborah James, London School of Economics If the intellectual contemplation of collectively instituted irrationality is what got anthropology going in the first place, then it must, at some point, address such entities as politicians, and why people vote for them. Read this book and learn. - Prof. Peter Gow, University of St Andrews
