Professional Learning In Nursing - Jenny Spouse
2008-04-15

The way nurses are taught is constantly evolving and changing. Workplace learning is seen as key to developing practitioners. In this book Jenny Spouse discusses how students learn in a range of different clinical settings and how best to facilitate this process. How do students learn to become nurses? What knowledge and understanding do they need to acquire? How do their preconceptions, beliefs about the learning process, and social needs affect their development? What do they find helpful and unhelpful? What makes clinical settings good for learning? Is it helpful for students to document their learning? What are the best ways for lecturer/ practitioners to facilitate student learning and what other factors influence their progress? The book explores how professional development can be better understood, following the progress of six nurse learners drawn from different parts of nursing and investigating both those difficulties faced by all students and those issues unique to particular students. It places these narratives in the context of nurse education today, exploring the implications of 'Fitness for practice' and 'Making a difference', and looking at the implications for the future development, organisation and funding of nurse education.

Academic Life and Labour in the New University - Ruth Barcan 2016-03-23

What does it mean to be an academic today? What kinds of experiences do students have, and how are they affected by what they learn? Why do so many students and their teachers feel like frauds? Can we learn to teach and research in ways that foster hope and deflate pretension? *Academic Life and Labour in the New University: Hope and Other Choices* addresses these big questions, discussing the challenges of teaching and researching in the contemporary university, the purpose of research and its fundamental value, and the role of the academy against the background of major changes to nature of the university itself. Drawing on a range of international media sources, political discourse and many years' professional experience, this volume explores approaches to teaching and research, with special emphasis on the importance of collegiality, intellectual honesty and courage. With attention to the intersection of large-scale institutional changes and intellectual shifts such as the rise of transdisciplinarity and the development of a pluralist curriculum, this book proposes the pursuit of more ethical, compassionate and critical forms of teaching and research. As such, it will be of interest not only to scholars of cultural studies and education, but to all those who care about the fate of the university as

an institution, including young scholars seeking to join the academy.
