## **Language Awareness at School** - Tim Marr 2023-05-02

All too often, schools make decisions about language without a proper understanding of the issues involved. Language Awareness at School addresses this problem by exploring a range of topics related to language, helping teachers to make informed choices about how to best support their students in becoming more confident, aware speakers and writers. Written in collaboration by an academic linguist and an experienced teacher, this essential book combines professional experience and academic expertise to demonstrate how a language-aware approach to education has the potential to transform both whole-school policy and classroom practice. Chapters explore such questions as the misconceptions surrounding the use of 'Standard English', teachers' and students' local accents, the development of cross-curricular speaking and writing skills and how to reinvigorate Modern Foreign Languages. This book also works to undo damaging prejudices about how students speak, instead highlighting opportunities to encourage students to notice, examine and debate language issues. Language Awareness at School is a crucial read for all teachers, trainee teachers and school leadership teams who want to make more informed decisions regarding language issues in schools.

## **Disciplinary Literacy and Explicit Vocabulary Teaching** - Kathrine Mortimore 2020-12-15

Firmly rooted in research evidence of what works within the classroom for our most disadvantaged students, Disciplinary Literacy and Explicit Vocabulary Teaching offers teachers and school leaders practical ways in which those students who are behind in their literacy capabilities can make excellent progress. Building on the work of Geoff Barton in his influential book Don't Call it Literacy, Kathrine Mortimore outlines the unique literacy challenges posed by specific subject areas for those with weaker literacy skills, and more importantly how these challenges can be addressed and overcome. A student's GCSE results are vital in giving them the choices they deserve in order to go on to the next stage of their academic careers. This book draws on the success stories of schools and subjects that have made significant improvements in the outcomes of the children they teach, regardless of their starting points. From the inevitable success of Michaela Community school, to the gains made by the English department at Torquay Academy and the rapid reading improvements at Henley Bank, this book draws on both whole school initiatives and subject-specific strategies which have had proven success. This book places a wide and balanced knowledge-rich curriculum at the centre of any school improvement strategy designed to

improve literacy, and illustrates the role that all subjects must combine to play in building the vital background knowledge and vocabulary that young people need in order to read independently. This curriculum must then be delivered using those teaching methods that have had the greatest impact on disadvantaged learners, and this book sets out how the methodology of direct and explicit instruction can be adopted within each subject area. Alongside this is a useful summary of staff development and inset which offers practical ways in which teachers' adoption of these effective strategies can be facilitated. There are also useful sections on creating a whole school dictionary of essential vocabulary, creating a culture of reading and writing, and also those key literacy barriers experienced by those students with some of the most common special educational needs.

*Talking about Oracy* - Sarah Davies 2020-12-17

Whether considering the art of debate; understanding dialogic teaching methods; the necessity of questioning; or the ability to assess and develop these skills, this book has been written by a classroom teacher, for classroom teachers, in the hope that oracy is dragged out of the shadows and recognised for its significance to improving students' life skills and future aspirations. When we think about the transferable skills all students will take with them post-academia, oracy, literacy and numeracy should logically stand proudly side by side. This triad of skillsets are the key components that are used to measure intellectual development in childhood, as well as being further instilled and nurtured in all students throughout their education. However, as children become students and as these students become critical thinkers, an element of this crucial triad appears to have been disowned in recent years. In 2020, oracy appeared to have even less relevance in academia, with the only supportive provision for both Language and Literature to deal with any missed learning being the eradication of any recorded proof of this skill. Yet another indication that oracy has, in some circumstances, been cast into the shadows and banished into the realm of the subject specific curricular. We need to be realistic and embrace the idea that this skill is a necessity to success for all learners post-academia. Training students in the ability to communicate effectively with different audiences in different contexts, needs to be brought back into the spotlight in the hopes that we can attempt to resolve any misconceptions regarding oracy's place in the curriculum. Through the recognition of the theoretical understanding of communication that will provide the foundations for this book, the aim is that it acts as a supportive guide that will provide suggestions and strategies in order to hopefully empower and encourage educators in all subjects in education, thus restoring the use and appreciation for this necessary skill both inside and outside the classroom. For so long, focus has been on the stress and rigor of assessments, and the fulfilment of the curriculum to ensure that all students can navigate their GCSE examinations. This book will question whether this will have a detrimental effect on students who may have been exposed to fewer of the skills that they will require when leaving an educational setting and venturing into everyday life. So, let's address the elephant in the room, and provide it a voice.

**Aqa Biology Synoptic Essays** - Al Waters 2016-11-15

The only book written for the new (first sitting 2017) AQA Biology exam. This book gives clear, concise and updated advice for every title found in the last 20 years and complete A\* essays for 25 of them. On top of this are example paragraphs, key tips and how to organise your essay to get the most marks. This book has evolved over a period of years. I am fortunate to have had a number of truly excellent students (Oxbridge and full UMS). Over the years I have ordered the transcript of all our school's A\* papers and collated the essays. Where there were gaps I gave these students the past-paper essay titles and mark schemes and paid them to write 'model essays'. Then, as a trained marker, I edited them all to make sure they were written to an A\* standard. A colleague of mine, who has also marked for AQA, then went through them as a third independent determination of their grade. We have used this collection of essays in our school for a number of years with fantastic results. With the advent of the new specification, I have revisited them and made changes to reflect the new content. Topics that are no longer at A-level have been removed and new content added, which has meant a number of particular large changes in the field of Ecology. This has been a surprisingly onerous undertaking, but I am very proud of the result. Someone then suggested to me that I should publish my work and this is the product - an analysis of over 40 titles and 25 A\* essays.
