## *The Politics of Cybersecurity in the Middle East* - James Shires 2022-05-01

Cybersecurity is a complex and contested issue in international politics. By focusing on the 'great powers'--the US, the EU, Russia and China--studies in the field often fail to capture the specific politics of cybersecurity in the Middle East, especially in Egypt and the GCC states. For these countries, cybersecurity policies and practices are entangled with those of long-standing allies in the US and Europe, and are built on

reciprocal flows of data, capital, technology and expertise. At the same time, these states have authoritarian systems of governance more reminiscent of Russia or China, including approaches to digital technologies centred on sovereignty and surveillance. This book is a pioneering examination of the politics of cybersecurity in the Middle East. Drawing on new interviews and original fieldwork, James Shires shows how the label of cybersecurity is repurposed by states, companies and other organisations to encompass a variety of concepts, including state conflict, targeted spyware, domestic information controls, and foreign interference through leaks and disinformation. These shifting meanings shape key technological systems as well as the social relations underpinning digital development. But however the term is interpreted, it is clear that cybersecurity is an integral aspect of the region's contemporary politics.

British Aircraft Corporation - Stephen Skinner 2012-08-01

The British Aircraft Corporation was formed from The Bristol Aeroplane Company, English Electric, Vickers-Armstrong and Hunting in 1960. In its short, seventeen-year, life, the British Aircraft Corporation built some of the most important aircraft and missiles of the 1960s, 1970s and beyond: its best-known products included the Jaguar and Tornado warplanes, Rapier missile and One-Eleven airliner. It was also responsible for the stillborn TSR2 strike aircraft, the 1965 cancellation of which remains controversial to this day. Most famously, the Anglo-French Concorde supersonic airliner came from the BAC stable. BAC was subsumed into British Aerospace (now BAE Systems) in 1977, but many of its products remain in service to this day. This book tells their complete story.

Arms in Academia - Elliot Murphy 2020-07-26

This book studies how the arms trade has continued to receive generous state subsidies, along with less direct

forms of financial and intellectual support from academia in the UK. It examines the ways in which arms dealing has contributed to the violation of human rights in the Middle East, North Africa, South America, Indochina and other regions of intense conflict, and in doing so, reveals how the industry sells a particular image of itself to the public. The volume: Extensively covers the arms trade and its impact across the world. Shows how the UK arms trade has developed research, investment and consultancy links with universities, museums and other public institutions. Discusses the future of the arms trade and explores alternatives in terms of job opportunities, economic growth and academic research criteria. A major intervention in international politics, this volume will be of great interest to scholars and researchers of military and strategic studies, international relations, human rights and the social sciences in general. It will also be of interest to policy analysts and defence professionals.

Beyond Algorithms - James Luke 2022-05-30

With so much artificial intelligence (AI) in the headlines, it is no surprise that businesses are scrambling to exploit this exciting and transformative technology. Clearly, those who are the first to deliver business-relevant AI will gain significant advantage. However, there is a problem! Our perception of AI success in society is primarily based on our experiences with consumer applications from the big web companies. The adoption of AI in the enterprise has been slow due to various challenges. Business applications address far more complex problems and the data needed to address them is less plentiful. There is also the critical need for alignment of AI with relevant business processes. In addition, the use of AI requires new engineering

practices for application maintenance and trust. So, how do you deliver working AI applications in the enterprise? *Beyond Algorithms: Delivering AI for Business* answers this question. Written by three engineers with decades of experience in AI (and all the scars that come with that), this book explains what it takes to define, manage, engineer, and deliver end-to-end AI applications that work. This book presents: Core conceptual differences between AI and traditional business applications A new methodology that helps to prioritise AI projects and manage risks Practical case studies and examples with a focus on business impact and solution delivery Technical Deep Dives and Thought Experiments designed to challenge your brain and destroy your weekends

**Women, Insecurity, and Violence in a Post-9/11 World** -

Bronwyn Winter 2017-03-23

September 11 has become a temporal and symbolic marker of the world's brutal entry into the third millennium. Nearly all discussions of world politics today include a tacit, if not overt, reference to that historical moment. A decade and a half on, Winter considers the impact of 9/11 on women around the world. How were women affected by the events of that day? Were all women affected in the same way? Based on theoretical reflection, empirical research, and field work in different parts of the world, each chapter of the book considers a different post-9/11 issue in relation to women: global governance, human security, globalized militarism, identity, and sexuality in transnational feminist movements.

**Aircraft as a System of Systems** - Sean Barker 2018-10-11

*Aircraft as a System of Systems: A Business Process Perspective*, written by Sean Barker, FBCS CEng and a former research scientist at BAE Systems in the UK, explains how developing even simple parts like a lever needs several different types of knowledge before moving on to the complications of designing a system. Today's airframers have taken on more of the role of systems integrators, putting the focus on the aircraft as a system-of-many-systems. Whereas an aircraft integrates many different systems into a single design, the system of systems which supports it is built by federating the systems of the different organizations, which were built and run independently of each other. *Aircraft as a System of Systems: A Business Process Perspective* provides a thorough analysis of how building aircraft taps into a huge pool of knowledge, how its complexity is also reflected in the numerous process links that exchange knowledge between different groups. But unlike conventional business processes, design processes do not follow one step after another – rather, a decision made at one point in the design is communicated to other areas of the design, which may in turn feed back new constraints that force the first decision to be revised.

*Business Process Transformation* - Varun Grover

2015-05-11

Featuring contributions from prominent thinkers and researchers, this volume in the "Advances in Management Information Systems" series provides a rich set of conceptual, empirical, and introspective studies that epitomize fundamental knowledge in the area of Business Process Transformation. Processes are interpreted broadly to include operational and managerial processes within and between organizations, as well as those involved in knowledge generation. Transformation includes radical and incremental change, its conduct, management, and outcome. The editors and contributing authors pay close attention to the role of IS organizations and information technologies in facilitating business process transformation. Each chapter places major emphasis on clearly articulating the "knowledge" generated, both theoretical and applied. The book incorporates case studies and tables throughout, and provides fundamental grounding for any stakeholder of business process transformation.

**A Long Time in Making** - James Nye 2014-10-02

Smiths Group (formerly Smiths Industries), part of the UK FTSE 100 index, is a global engineering company with a market capitalisation over £5bn. Evolving from beginnings in the Victorian jewellery trade, to significant market presences in the twentieth century motor accessory, clock and watch industries, it has reinvented itself again as a diversified international company, operating in the medical, communications, security and engineered components sectors. Its narrative history, illuminating the reasons for its survival and adaptability, offers useful data and information to aid wider research into questions such as the legitimacy of conglomerates as a business model, the

creation and maintenance of corporate culture, issues of succession, the effects of mergers and the questionable value placed upon targeted synergies-even the role of serendipity. The story begins with several generations of the Smith family amassing a fortune in retail, and then, following a 1914 stock-market flotation, describes the transition from family run business to the development of a professionally-run managerial enterprise. Since the 1970s it has had to face the decline of major markets and competitive pressures, leading to the adoption of new business lines, globalisation, and the internationalisation of its workforce. It now has 23,000 employees across more than 50 countries-along the way shocking the markets by abandoning core businesses and undergoing a controversial merger. Unfettered access to company records, and interviews with former staff members, provide insights into the strategy and management of the firm, illuminating the rich culture of Smiths, characterised by the frequent fostering of technical brilliance and a cast of larger than life characters. **Make Your Own Waves** - Louis Patler 2016-07-01

The metaphors have always been there: Ebbs and flows. Riding high. The reward of the ocean crest. The risk of the eventual crash. Like the ocean, the marketplace is constantly changing, causing the buttoned-up businessperson to oftentimes feel like a sun-burned, sand-encrusted surfer trying desperately to ride his next barrel. So maybe before taking your next venture out into the cresting and crashing marketplace ocean, there are some lessons to learn from the experts: surfers! Like successful entrepreneurs, big-wave surfers

rely on preparation, passion, and persistence--and they relish a challenge. So it's no surprise that countless surfers have pioneered products and launched thriving businesses, including GoPro Cameras, O'Neill, Reef, and Quiksilver. Packed with stories of surf innovators, entrepreneurs, and legends, *Make Your Own Waves* reveals 10 rules of the water that the successful entrepreneur must adhere to as well, including:

- Learn to swim--the basics set the stage for everything
- Get wet--you can't succeed if you stay on the beach
- Always look "outside"--watch for what's coming or you may miss a better opportunity
- Commit, charge, shred--you have to go all out to be all in
- Never turn your back on the ocean--always stay in touch with the marketplace and the customer
- Stay stoked--desire drives success
- And more!

Even the best surfers fall, but they learn from their wipeouts and paddle back out to once again push the edge, knowing that with big waves come big opportunities. Don't just sit on the beach. Grab your board and get in!

**Business Ethics** - Bob Tricker 2014-01-03

Traditionally, books on business ethics focus on CSR, companies' relations with their stakeholders, and corporate citizenship. More recently, green credentials and sustainability have been added to that agenda. Unconventionally, this book argues that business ethics are basic to running business, not a separate subject. They are inherent to the governance and management of every organization, not an optional exercise in corporate citizenship. Business ethics concern behaviour in business and the behaviour of business. Decisions at every level in a company have ethical implications – strategically in the board room, managerially throughout the organization, and operationally in all of its activities. The use, and sometimes the abuse, of corporate power, the process of corporate governance, raises ethical issues. Business involves risk-taking, whether decisions are at the strategic, managerial, or operational level. Exposure to ethical risk needs to be part of every organization's strategy formulation, policy making, and enterprise risk management. Designed to be read by both undergraduates and postgraduates, this book is a primer on ethics in business. It is also relevant to ethics courses that are now part of many legal, accountancy and other professional examinations. The book is not about moral philosophy, nor does it prescribe appropriate standards of behaviour or recommend economic, legal or political solutions. Rather it enables readers to recognize ethical issues in business, to respond appropriately, and to embed ethics in business processes. The book not only considers what business ethics are, and why they are important, but offers practical approaches on how to develop a successful corporate ethics culture.

**Business Analytics** - Thomas W. Jackson 2018-09-21

This innovative new textbook, co-authored by an established academic and a leading practitioner, is the first to bring together issues of cloud computing, business intelligence and big data analytics in order to explore how organisations use cloud technology to analyse data and make decisions. In addition to offering an up-to-date exploration of key issues relating to data privacy and ethics, information governance, and the future of analytics, the text describes the options available in deploying analytic solutions to the cloud and draws on real-world, international examples from companies such as Rolls Royce, Lego, Volkswagen and Samsung. Combining academic and practitioner perspectives that are crucial to the understanding of this growing field, Business Analytics acts an ideal core text for undergraduate, postgraduate and MBA modules on Big Data, Business and Data Analytics, and

Business Intelligence, as well as functioning as a supplementary text for modules in Marketing Analytics. The book is also an invaluable resource for practitioners and will quickly enable the next generation of 'Information Builders' within organisations to understand innovative cloud based-analytic solutions.

**Race Across the Atlantic** - Bruce Vigar 2019-03-30

It was Tuesday, 15 July 1919 and for the residents of Clifden on Ireland's west coast this was not to be a normal day. Just before 08.40 hours, descending out of the gloom, came a large, twin-engine airplane lining up for final approach. One or two onlookers recognized the danger straight away for this was an area of soft bog, but their attempts to alert the pilot were in vain. The aircraft began to sink and, with a squelch, came to a sudden stop, the tail rearing up in the air. Dazed and with fuel filling the cockpit the two-man crew scrambled out, grabbing what they could. After a flight lasting 16 hours and 28 minutes, Captain John Alcock and Lieutenant Arthur Whitten-Brown had won the race to be the first to fly nonstop across the Atlantic. It was a rough ending for a race that began in April 1913 when Lord Rothermere, aviation philanthropist and owner of the Daily Mail, offered a prize of £10,000, roughly equivalent to \$1,000,000 in today's money, to "the

aviator who shall first cross the Atlantic in an aeroplane in flight from any point in the United States of America, Canada or Newfoundland to any point in Great Britain or Ireland in 72 continuous hours." Illustrated by many unique photographs this book tells the story of the race, delayed for almost six years by the First World War. Many aircraft would be entered but few would even get off the ground. The teams faced great difficulties in preparing for the challenge of crossing one of the most hostile stretches of ocean on Earth. The authors not only reveal tales of failures and technical difficulties, but of the intense frustration of waiting for the perfect weather-window. And even when finally airborne, Alcock and Brown's flight almost ended in disaster on several occasions as weather conditions almost conspired to cast them down into the grey, cold waters of the Atlantic and almost certain death.

**Masculinities, Gender and International Relations** - Terrell Carver 2022-09-06

Gender is widely recognized as an important and useful lens for the study of International Relations. However, there are few books that specifically investigate masculinity/ies in relation to world politics. Taking a feminist-inspired understanding of gender as its starting point, the book: • explains that gender is both an asymmetrical binary and a hierarchy; • shows how masculinization works via 'nested hierarchies' of domination and subordination; • explores the imbrication of masculinities with the nation-state and great-power politics; • develops an understanding of the arms trade with commercial processes of militarization. Written in an accessible style, with suggestions for further reading, this book is an invaluable resource for students and teachers applying 'the gender lens' to global politics.

**British Army Aviation in Action** - Tim Ripley 2012-07-19  
The British Army is the UK's second largest operator of military aircraft, fielding more than 300 armed helicopters, fixed wing surveillance aircraft and unmanned aerial vehicles. Its aviation units have been

in the forefront of UK combat air operations in Kosovo, Iraq and Afghanistan between 1999 and 2010. HRH Prince Harry was recently awarded his wings to allow him to begin training as an Apache attack helicopter pilot, further raising the profile of British Army aviation. This book will look at the current units and equipment used by British Army aviation elements of the Army Air Corps (which operates helicopters and fixed wing aircraft) and Royal Artillery (which operates unmanned aerial vehicles or drones). It will provide a detailed account of British Army aviation operations, drawing on first hand accounts of army personnel and commanders, official records and the authors observations from war zones.

**Drones and Other Unmanned Weapons Systems under International Law** - Stuart Maslen 2018-08-16

Drone strikes have become a key feature of counterterrorism operations in an increasing number of countries. This work explores the various domestic and international legal regimes that govern the manufacture, transfer, and use of armed drones as well as fully autonomous weapons systems where computer algorithms decide who or what to target and when to fire.

**Drug War Pathologies** - Horace A. Bartilow 2019-07-30

In this book, Horace Bartilow develops a theory of embedded corporatism to explain the U.S. government's war on drugs. Stemming from President Richard Nixon's 1971 call for an international approach to this "war," U.S. drug enforcement policy has persisted with few changes to the present day, despite widespread criticism of its effectiveness and of its unequal effects on hundreds of millions of people across the Americas. While researchers consistently emphasize the role of race in U.S. drug enforcement, Bartilow's empirical

analysis highlights the class dimension of the drug war and the immense power that American corporations wield within the regime. Drawing on qualitative case study methods, declassified U.S. government documents, and advanced econometric estimators that analyze cross-national data, Bartilow demonstrates how corporate power is projected and embedded—in lobbying, financing of federal elections, funding of policy think tanks, and interlocks with the federal government and the military. Embedded corporatism, he explains, creates the conditions by which interests of state and nonstate members of the regime converge to promote capital accumulation. The subsequent human rights repression, illiberal democratic governments, antiworker practices, and widening income inequality throughout the Americas, Bartilow argues, are the pathological policy outcomes of embedded corporatism in drug enforcement.

*A Very Short, Fairly Interesting and Reasonably Cheap Book about International Business* - George Cairns  
2008-09-17

Selected as an Outstanding Academic Title by Choice Magazine, January 2010 Conceived by Chris Grey and written to get you thinking, the “Very Short, Fairly Interesting and Reasonably Cheap” series offers an informal, conversational, accessible yet sophisticated and critical overview of what you find in conventional textbooks. In International Business, the authors challenge the principles of business in the context of trading blocs, protectionism, and restricted trade; the effects of international governing bodies like the WTO, the IMF and the World Bank; looking at this very big and interesting field with humour and insightfulness. Ideal for Undergraduate students in Business and Management, this text will also appeal to anyone interested in the

fast-paced world of International Business.

**Understanding Popular Culture and World Politics in the Digital Age** - Laura J. Shepherd 2016-05-20

The practices of world politics are now scrutinised in a way that is unprecedented, with even those previously – or conventionally assumed to be – disengaged from international affairs being drawn into world politics by social media. Interactive websites allow users to follow election results in real-time from the other side of the world, and online mapping means that the world ‘out there’ is now available on your mobile phone.

Understanding Popular Culture and World Politics in the Digital Age engages these themes in contemporary world politics, to better understand how digital communication through new media technologies changes our encounters with the world. Whether the focus is digital media, social networking or user-generated content, these sites of political activity and the artefacts they produce

have much to tell us about how we engage world politics in the contemporary age. This volume represents the starting point of a dialogue about how digital technologies are beginning to impact the research and practice of scholars and practitioners in the field of International Relations, with the collection of cutting-edge essays dealing specifically with the intertextuality of world politics and digital popular culture. This book will be of use to International

Relations research academics (and critically engaged publics) interested in the core themes of global politics – subjectivity, militarism, humanitarianism, civil society organisation, and governance. The book also employs theories and techniques closely associated with other social science disciplines, including political theory, sociology, cultural studies and media studies.
