Study Guide to Human Anatomy and Physiology 2 - Michael T. Harrell 2012-09-01

Welcome everyone to your guide to Human Anatomy & Physiology 2! This text will cover endocrine system, blood, heart, arteries, veins, lymphatic system, respiratory system, digestive system, urinary system, water, electrolytes, acids, reproductive system and development. I have been teaching college level human anatomy and physiology for many

years, as well as other courses. My other classes taught have included: pathophysiology, biology, zoology, microbiology, and others. In this time I have seen thousands of students. I have learned through the years the best ways to learn the most information in the least amount of time. There are two ways to study, smart or hard. If you will follow my information and learn the key points of each chapter, you will make an excellent grade in your A&P class. In each chapter concentrate your efforts on learning the key terms. The key terms are the ones you are most likely to see on your exams. Learn to associate words and how to connect them. For example, anatomy is the study of the structure of the human body. Look at the key words in this

sentence, anatomy and structure. Learn how to pick out these key terms and remember them, not the entire sentence or paragraph full of information. When given a paragraph, page or whatever; just memorize the key words and then learn how to associate them. Learn what they have in common and be able to speak from one word to the next. This will be the best way to learn your anatomy text. I will make the assumption that anyone reading this book is taking human anatomy and physiology. You will still need your text, but more as a reference to pictures and such. This guide will give you the important information from the chapters, which will be what you are most likely to see on an exam. Sample questions will be included, which are also the most likely for you

to see on an exam. Note also that this book is not a guide for A&P lab. An anatomy lab book is little more than a book with lots of pictures in it. That is what anatomy is, memorizing parts and pieces of the body. You simply look at the picture in your book and then learn those parts on a model. You may be looking at a skull, brain, kidney, etc., it is simple memorization. This book is more to help you with the lecture.

Biology Education for Social and Sustainable Development - Mijung Kim
2012-10-20

In an era of globalization and urbanization, various social, economic, and environmental challenges surround advances in modern biological sciences. Considering how biological knowledge and practice are intrinsically related to building a sustainable relationship between nature and human society, the roles of biology education need to be rethought to respond to issues and changes to life in this biocentury. This book is

a compilation of selected papers from the Twenty Third Biennial Conference of the Asian Association for Biology Education 2010. The title, *Biology Education for Social and Sustainable Development*, demonstrates how rethinking and reconstruction of biology education in the Asia-Pacific region are increasingly grounded in deep understandings of what counts as valuable local knowledge, practices, culture, and ideologies for national and global issues, and education for sustainable development. The 42 papers by eminent science educators from Australia, China, Philippines, Singapore, Taiwan, and the U.S., represent a diversity of views, understandings, and practices in biology education for sustainable development from school to

university in diverse education systems and social-cultural settings in the Asia-Pacific region and beyond. The book is an invaluable resource and essential reference for researchers and educators on Asian perspectives and practices on biology education for social and sustainable development.

The Color of Water - James McBride 2012-03-01 From the New York Times bestselling author of Deacon King Kong and The Good Lord Bird, winner of the National Book Award for Fiction: The modern classic that Oprah.com calls one of the best memoirs of a generation and that launched James McBride's literary career. More than two years on The New York Times bestseller list. As a boy in Brooklyn's Red Hook projects, James McBride knew his mother was different. But when he asked her about it, she'd simply say 'I'm light-skinned.' Later he wondered if he was different too, and asked

his mother if he was black or white. 'You're a human being! Educate yourself or you'll be a nobody!' she snapped back. And when James asked about God, she told him 'God is the color of water.' This is the remarkable story of an eccentric and determined woman: a rabbi's daughter, born in Poland and raised in the Deep South who fled to Harlem, married a black preacher, founded a Baptist church and put twelve children through college. A celebration of resilience, faith and forgiveness, *The Color of Water* is an eloquent exploration of what family really means.
