Estimator** - Ray F. Hicks 2019-10

Earthbag Building - Kaki Hunter
2004-11-19

The only comprehensive, illustrated,
step-by-step guide to building with
earthbags. Over seventy percent of
Americans cannot afford to own a
code-enforced, contractor-built home.
This has led to widespread interest
in using natural materials-straw,
cob, and earth-for building homes and

other buildings that are inexpensive,
and that rely largely on labor rather
than expensive and often
environmentally-damaging outsourced
materials. Earthbag Building is the
first comprehensive guide to all the
tools, tricks, and techniques for
building with bags filled with earth-
or earthbags. Having been introduced
to sandbag construction by the
renowned Nader Khalili in 1993, the
authors developed this "Flexible Form
Rammed Earth Technique" over the last
decade. A reliable method for
constructing homes, outbuildings,
garden walls and much more, this
enduring, tree-free architecture can
also be used to create arched and
domed structures of great beauty-in
any region, and at home, in
developing countries, or in emergency
relief work. This profusely
illustrated guide first discusses the
many merits of earthbag construction,
and then leads the reader through the
key elements of an earthbag building:
Special design considerations
Foundations, walls, and floors
Electrical, plumbing, and shelving
Lintels, windows and door
installations Roofs, arches and domes
Exterior and interior plasters. With
dedicated sections on costs, making
your own specialized tools, and
building code considerations, as well
as a complete resources guide,
Earthbag Building is the long-
awaited, definitive guide to this
uniquely pleasing construction style.
