International Handbook of Financial Literacy - Carmela Aprea 2016-03-24

This Handbook presents in-depth research conducted on a myriad of issues within the field of financial literacy. Split into six sections, it starts by presenting prevalent conceptions of financial literacy before covering financial literacy in the policy context, the state and development of financial literacy within different countries, issues of assessment and evaluation of financial literacy, approaches to teaching financial literacy, and teacher training and teacher education in financial literacy. In doing so, it provides precise definitions of the construct of financial literacy and elaborates on the state and recent developments of financial literacy around the world, to show ways of measuring and fostering financial literacy and to give hints towards necessary and successful teacher trainings. The book also embraces the diversity in the field by revealing contrasting and conflicting views that cannot be bridged, while at the same time making a contribution by re-joining existing materials in one volume which can be used in academic discourse, in research-workshops, in university lectures and in the definition of program initiatives within the wider field of financial literacy. It allows for a landscape of financial literacy to be depicted which would foster the implementation of learning opportunities for human beings for sake of well-being within financial living-conditions. Reflective Interviewing - Kathryn Roulston 2010-02-11

Qualitative researchers have long made use of many different interview forms. Yet, for novice researchers, making the connections between "theory" and "method" is not always easy. This book provides a theoretically-informed guide for researchers learning how to interview in the social sciences. In order to undertake quality research using qualitative interviews, a researcher must be able to theorize the application of interviews to investigate research problems in social science research. As part of this process, researchers examine their subject positions in relation to participants, and examine their interview interactions systematically to inform research design. This book provides a practical approach to interviewing, helping researchers to learn about themselves as interviewers in ways that will inform the design, conduct, analysis and representation of interview data. The author takes the reader through the practicalities of designing and conducting an interview study,

and relates various forms of interview to different underlying epistemological assumptions about how knowledge is produced. The book concludes with practical advice and perspectives from experienced researchers who use interviews as a method of data generation. This book is written for a multidisciplinary audience of students of qualitative research methods.

Creating Value - Laura R. Oswald 2015-01-22

In global consumer culture, brands structure an economy of symbolic exchange that gives value to the meanings consumers attach to the brand name, logo, and product category. Brand meaning is not just a value added to the financial value of goods, but has material impact on financial markets themselves. Strong brands leverage consumer investments in the cultural myths, social networks, and ineffable experiences they associate with marketing signs and rituals. *Creating Value: The Theory and Practice of Marketing Semiotic Research* is a guide to managing these investments by managing the cultural codes that define value in a market or consumer segment. The book extends the discussion beyond the basics of semiotics to post-structural debates related to ethnographic performance, multicultural consumer identity, the digitalized consumer, and heterotopic experiences of consumer space. The book invites readers to challenge the current thinking on topics ranging from cultural branding and brand rhetoric to digital media management and service site design. It also emphasizes the role of product category codes and cultural trends in the production of perceived value. *Creating Value* explains theory in language that is accessible to academics and students, as well as research practitioners and marketers. By applying semiotics to the everyday world of the marketplace, the book makes sense of the semiotics discipline, which is often mystified by technical jargon and hair-splitting debate in the academic literature. The book also provides practitioners and professors with a practical guide to the methods used in semiotic research across the marketing mix.

'The compilers of this impressive, unique work claim it "brings together, in one place, authoritative essays on virtually all social science methods topics, both quantitative and qualitative" - a claim examination supports. More than 400 contributors from the US and abroad present approximately 1,000 comprehensive, in-depth, well-referenced entries that vary in length from 50 to 2,500 words. The attractively designed and produced volumes, 1,351 total pages, consist of easily legible text and figures, the front matter occupying 46 pages and the index 40.... This defining work will be valuable to readers and researchers in social sciences and humanities at all academic levels. As a teaching resource it will be useful to instructors and students alike and will become a standard reference source. Essential for general and academic collections' - Choice
SAGE Reference is proud to announce The SAGE Encyclopedia of Social Science Research Methods, a three-volume resource that is a first of its kind, developed by the leading publisher of social science research methods books and journals. This unique multi-volume reference set offers readers an all-encompassing education in the ways of social science researchers. Written to be accessible to general readers, entries do not require any advanced knowledge or experience to understand the purposes and basic principles of any of the methods. The Encyclopedia features two major types of entries: definitions, consisting of a paragraph or two, which provide a quick explanation of a methodological term; and topical treatments or essays, discussing the nature, history, application/example and implication of using a certain method. Also included are suggested readings and references for future study. To help provide a more complete explanation than is often achieved within the scope of a single article, key terms and concepts appear in small capital letters to refer readers to related terms explained elsewhere. In addition to epistemological issues that influence the nature of research questions and assumptions, The SAGE Encyclopedia of Social Science Research Methods tackles topics not normally viewed as part of social science research methodology, from philosophical issues such as poststructuralism to advanced statistical techniques. In covering the full range of qualitative and quantitative data analyses, this key reference offers an integrated approach that allows the reader to choose the most appropriate and robust techniques to apply to each situation. Many entries treat traditional topics in a novel way, stimulating both interest and new perspectives. One example is the entry Econometrics, by Professor Damodar Gujarati. Following a process which many educators preach but seldom practice, Gujarati walks the reader twice through the research process from economic theory to data and models to analysis, once in principle and a second time with an example. In using the ordinary process of economic research to achieve an extraordinary impact, he leaves the reader thinking not only about methods and models but also the fundamental purpose of econometrics. Topics Covered: - Analysis of Variance - Association and Correlation - Basic Qualitative Research - Basic Statistics - Causal Modeling (Structural Equations) - Discourse/Conversation Analysis - Econometrics - Epistemology - Ethnography - Evaluation - Event History Analysis - Experimental Design - Factor Analysis and Related Techniques - Feminist Methodology - Generalized Linear Models - Historical/Comparative - Interviewing in Qualitative Research - Latent Variable Model - Life History/Biography - Loglinear Models (Categorical Dependent Variables) - Longitudinal Analysis - Mathematics and Formal Models - Measurement Level - Measurement Testing and Classification - Multiple Regression - Multilevel Analysis - Qualitative Data Analysis - Sampling in Surveys - Sampling in Qualitative Research - Scaling - Significance Testing - Simple Regression - Survey Design - Time Series
Key Features: - Over 900 entries arranged A to Z Each entry is written by a leading authority in the field, covering both quantitative and qualitative methods - Covers all disciplines within the social sciences - Contains both concise definitions and in-depth essays - Three volumes and more than 1500 pages

Practical Research and Evaluation - Lena Dahlberg 2010-04-22

This book is a starter 'DIY' text for practitioners who are looking to conduct evaluation studies and research as part of their own professional practice. The growing emphasis on evidence-based practice means that there is an increasing need for practitioners to have at least a basic understanding of research, be aware of methodological pitfalls and to be updated on new methods. This book provides a practical, user-friendly guide to social science research methods for professionals who have benefited from little, if any, formal research methods training but find themselves in a role that requires them to read and understand complex research findings and carry out their own research as part of their professional practice. Practical Research and Evaluation is aimed at practitioners working in education, health, social care and community work. Many in this market are non-graduates or are those whose study did not contain a research element, but are required to know how research works. This book has three main aims which will benefit this audience - to enable readers to carry out small-scale research projects of their own, provide them with the basic understanding necessary to commission research, and enable them to better understand and evaluate critically research reports. This book is designed specifically for 'Do-it-Yourself' researchers working in the public or voluntary sectors. It is accessible and relevant to practitioners, uses non-technical language wherever possible and employs grounded examples, practical tips, checklists and readings lists throughout.

Lessons from Problem-based Learning - H. J. M. van Berkel 2010

Problem-based learning (PBL) has excited interest among educators around the world for several decades. Among the most notable applications of PBL is the approach taken at the Faculty of Health, Medicine and Life sciences (FHML) at Maastricht University, the Netherlands. Starting in 1974 as a medical school, the faculty embarked on the innovative pathway of problem-based learning, trying to establish a medical training program which applied recent insights of education which would be better adapted to the needs of the modern physician. The medical school, currently part of the FHML, can be considered as an 'established' school, where original innovations and educational changes have become part of a routine. The first book to bring this wealth of information together, Lessons from Problem-based Learning documents those findings and shares the experiences of those involved, to encourage further debate and refinement of problem-based learning in specific applications elsewhere and in general educational discussion and thought. Each chapter provides a description of why and what has been done in the Maastricht program, followed by reflection on the benefits and issues that have arisen for these developments. The final section of the book examines the application of PBL in the future, and how it is likely to develop further.
