Hip Hop Decoded - Black Dot 2005

SUPERANNO This masterpiece takes its reader from Hip Hop's ancient origin to its modern day Matrix. Never before has a book been written about Hip Hop through the spiritual scope of the culture, or has examined the culture from a mystical

perspective. The Black Dot cleverly accomplishes both, while providing plenty of fuel for a conspiracy theorist. Hip Hop Decoded reveals that Hip Hop is far deeper than just beats and rhymes, and masterfully illustrates that each element of Hip Hop (Graffiti, DJ, Emcee, and B-Boy) has an ancient origin (hieroglyphics, drummer, oracle, and dancer), as well as spiritual significance (earth, air, fire, and water).

Althusser and Law - Laurent de Sutter 2013-03-05

Althusser and Law is the first book specifically dedicated to the place of law in Louis Althusser's philosophy. The growing importance of Althusser's philosophy in contemporary debates on the left has - for practical and political, as well theoretical reasons - made a sustained consideration of

his conception of law more necessary than ever. As a form of what Althusser called 'Ideological State Apparatuses', law is at the forefront of political struggles: from the destruction of Labour Law to the exploitation of Patent Law; from the privatisation of Public Law to the ongoing hegemony of Commercial Law; and from the discourse on Human Rights to the practice of judicial courts. Is Althusser still useful in helping us to understand these struggles? Does he have something to teach us about how law is produced, and how it is used and misused? This collection demonstrates that Althusser's ideas about law are more important, and more contemporary, than ever. Indeed, the contributors to Althusser and Law argue that Althusser offers a new and invaluable perspective on the place of law in contemporary life.

Psychoanalytic Insights into Social, Political, and Organizational Dynamics -

Seth Allcorn 2021-08-16

This fascinating interdisciplinary work explores U.S. politics since 2015 and offers psychodynamic insights into the unconscious undercurrents of contemporary culture and politics in the United States. Allcorn and Stein expertly lead readers up the steep learning curve of understanding the Trump era by exploring seven key elements of recent political dynamics. Using the complementary psychodynamic models of object relations, Group Relations and Karen Horney's tripartite theory, this book makes sense of the Age of Trump and its chaotic world of alternate facts, conspiracy theories, reality TV politics, hoax pandemics, and the sweeping chaos of life in the United States. This sense-making relies on two triangulations. The first represents the complex systemic political scene. The

second uses three psychoanalytic theories to understand social, political, and organizational dynamics. This book is a key resource for helping readers know and understand ourselves, our fellow citizens, colleagues, family, friends and what Trump and his followers call "them" such as liberals and foreign immigrants, as well as both the larger polarized social and political context in the United States today. The book also provides concrete examples of how these discoveries can be operationalized both in organizations and at the level of national government and leadership. This book is an essential reading for students in organizational behavior including leadership and how governments operate, as well as behavioral health professionals consulting or offering therapy to organizations.

The Tejas Story - Philip Rajkumar 2008
The Indian Light Combat Aircraft (Tejas) has had a long and checkered development

history. The author traces in some detail the development of the all important fly-by-wire flight control system, which was being developed in India for the first time. The less than ideal relationship between the three key players in the project, ADA, HAL and the IAF can be read between the lines. In spite of this, the many challenges overcome by the development team is a heartwarming success story of Indian technological endeavour.

Warriors After War - Richard Bonney 2011
The inspiration for this book arose from the opening of the Srinagar-Muzaffarabad bus

route on 7 April 2005, the first direct link between the two parts of divided Kashmir since 1947. The original impetus for change in the region arose not from politicians but from ex-military figures in Pakistan and India who had made a direct approach to the Institute for Multi-Track Diplomacy (IMTD), an independent, not-for-profit organization in the United States headed by former US Ambassador John W. McDonald. Most of the twenty-six retired military figures from India and Pakistan interviewed in this book accept that with both countries possessing nuclear weapons since 1998, choosing war to resolve outstanding disputes is no longer a sensible or realistic option. They differ greatly, however, in their analysis of the opportunities and pathways towards a sustainable peace in South Asia, with the greatest divergence of views on the Kashmir dispute. The material contained in the interviews is enhanced with biographical

and other notes, along with a comprehensive introduction and conclusion. The detailed Appendices provide an analysis of religious-based extremist violence in Kashmir and Pakistan.

Energising Indian Aerospace Industry - Jasjit Singh 2007

India's infrastructure in the area of aerospace industry is well developed even if inadequate for the future. Private industry in India has moved well beyond its traditional position of small-medium scale industry to large scale modern manufacturing sectors in diverse areas, and is now capable of partnership with the best in terms of technology, management and productivity. Contrary to conventional wisdom, they are partners in a variety of defence industry enterprises. The aerospace industry, in particular, has consistently performed creditably for a developing country that India is. There is tremendous scope and

potential for energising our national aerospace industry in the coming decades to meet the national needs of the defence and civilian sectors. In turn, this would also increase the opportunities for greater cooperation with the aerospace industry in the developed countries for mutual benefit. This would reinforce an expanding and increasingly capable national science and technology base to provide a multiplying effect to that partnership.
