The Marijuana Horticulture Handbook - Dr Rita Brooks 2022-11-05

A STEP-BY-STEP BEGINNERS GUIDE TO GROWING TOP-QUALITY WEED So, you're interested in growing cannabis? Growing weed is super easy-it's called "weed" for a reason-so don't worry if you haven't grown anything before. This clear, easy-to-digest guide will help growers of all kinds, especially first-time ones. Whether indoors or outdoors, growing marijuana is fun and rewarding, but it can also be challenging and takes a certain amount of patience, time, and money. It'll walk you through all the steps of growing, from preparation, to seed germination, plant growth, and harvesting, as well as best practices and how to troubleshoot common problems. Because the plant was illegal for so long, a lot of grow info has been passed down by word of mouth. There are many myths and traditions about growing weed, so it can be hard to sort good, sound advice from hearsay. Also, because it was illegal, there's ample information on indoor growing and how to get the most out of a small space by maximizing harvests and training plants. These are all great resources but not all growers want to put in that amount of time and effort to get a ton of weed-some growers just want to have fun, grow a little weed, and smoke something they grew themselves. As states legalize weed and the plant becomes more accepted, more people are trying out their green thumbs by growing their own weed at home. Most states with legal weed allow one person to grow six plants at their residence and an entire household to grow 12 plants. Some allow less, and some allow more. But how much actual weed is that in dried buds that you can smoke? An ounce? A pound? Two pounds? The tricky thing is, all weed plants aren't the same size, and many factors affect how big a plant will get and how dense its buds become. Want to learn more? Get a copy of this book now.

Cannabis Growing. Marijuana Horticulture Guide - Leo Holden 2016-12-28

The best marijuana is the one you grow yourself. This is something that cannot be totally explained in logical terms, but still every grower, even the first-time novice, knows that his plant has the most healing and mind-altering, most appreciated effect, while contradicting all rational propositions that dictate quality/potency status. In other words, your own harvest works magic for you. The consumption of cannabis has become too much of a recreational experience that has generated around it a whole industrial mechanism that is forced to play by the market rules, falling in the consumerist trap of producing a lot, in shorter time, with less resources and less attention. The result is an underground niche market infused with poor quality marijuana, that's been produced for a single reason, to stone you into numbness, more or less like a unidirectional kick. But this particular effect is nothing without the complexity of sensations, mind-altering perceptions and the soothing ability to calm your brain and body instead of just putting them into a vegetative state. This profit driven common practice has practically set a baseline of economic efficiency and as collateral, consumers are already accustomed with only this particular effect and this particular perception of the use of marijuana - therefor the public attention was distracted from the real beneficial properties of this incredible plant used as a natural remedy for millennia. Here is a preview of what you'll learn: - Outdoors vs. Indoors growing - Cannabis strains - Germination - Vegetative stage - Flowering - Harvesting

Cannabis Horticulture Growing Guides - Michelle Bates Ph D 2020-05-19

Cannabis goes by many names; weed, pot, marijuana, bud, ganja and more. These all refer to the dried and cured buds of a female cannabis plant. Cannabis plants can live in many environments, and some form of cannabis naturally grows nearly everywhere in the world. Yet it's the flowers of specially bred female cannabis plants which most people think of when it comes to the word "cannabis." Cannabis is a weed in the wild that adapts to many climates. Cannabis plants can actually be really easy to grow if you have the right information and know what to do. After you start growing, it usually takes at least 3 months until harvest for most strains (some just a little less, some strains take longer, and it will also take longer if you grow big plants). After harvest, your cannabis buds takes around a week to dry. Lastly, for the best quality, most growers want to cure their bud for 2+ weeks to get a smoother taste and a higher perceived potency. After being cured for 2-4 weeks, buds will feel stronger and be less likely to cause headaches or anxiety. Cannabis plants are weeds with simple needs. Your cannabis plants will grow as long as you give them the right amount of the following resources. Another common problem new growers have is the tendency to skip crucial steps like maintaining a proper pH or getting the right kind of nutrients. While you can get lucky and succeed at growing weed without taking these steps, you are a lot more likely to end up plants that die or just never produce any buds. It can actually be really easy to grow marijuana with the right info. It's like growing any other plant. You follow a proven set of steps, and before you know it, you'll be harvesting your first buds.
