[Climate Chaos and its Origins in Slavery and Capitalism](#) - Reva Blau 2020-10-26

Climate Chaos provides readers the latest consensus among international scientists on the cascading impacts of climate change and the tipping points that today threaten to

irreversibly destroy the delicate balance of the Earth's ecosystems. The book argues that deregulation and an expansion of fossil fuel extraction have already tipped the planet towards a climate that is out of control. This crisis will cause massive human

suffering when extreme weather, pollution and disease lead to displacement, food and water shortages, war, and possibly species extinction. The repression of science creates an existential crisis for humanity that has reached crisis proportions in the twentieth-first century. The scale of the crisis has prompted a call for geoengineering, large interventions into the climate by technological innovation. However, the history of colonialism and slavery make the technological and monetary elites untrustworthy to solve this humanitarian and planetary crisis. While the elites have always cast certain groups of humanity as expendable, the climate crisis makes a true humanist and egalitarian movement based in human rights and dignity not only aspirational but also existentially mandatory. The crisis demands that we remake the world into a more just and safe place for all the world's people.

Overheated - Kate Aronoff
2021-04-20

This damning account examines the forces that have hijacked progress on climate change and offers a bold vision of what it will take, politically and economically, to face the existential threat of global warming head-on. In the past few years, it has become impossible (for most) to deny the effects of climate change and that the planet is warming, and to acknowledge that we must act. But a new kind of denialism is taking root in the halls of power, shaped by a quarter-century of neoliberal policies, that threatens to doom us before we've grasped the full extent of the crisis. As Kate Aronoff argues, since the 1980s and 1990s, economists, pro-business Democrats and Republicans in the US, and global organizations like the UN and the World Economic Forum have all made concessions to the oil and gas industry that they have no intention of reversing. What's more, they believe that climate change can be solved through the market, capitalism can be a force for good, and all of us, corporations

included, are fighting the good fight together. These assumptions, Aronoff makes abundantly clear, will not save the planet. Drawing on years of reporting and rigorous economic analysis, Aronoff lays out a robust vision for what will, detailing how to constrain the fossil fuel industry; transform the economy into a sustainable, democratic one; mobilize political support; create effective public-private partnerships; enact climate reparations; and adapt to inevitable warming in a way that is just and equitable. Our future, *Overheated* makes clear, will require a radical reimagining of our politics and our economies, but if done right, it will save the world.

Heat, Greed and Human

Need - Ian Gough 2017-10-27

This book builds an essential bridge between climate change and social policy. Combining ethics and human need theory with political economy and climate science, it offers a long-term, interdisciplinary analysis of the prospects for sustainable development and social justice.

Beyond 'green growth' (which assumes an unprecedented rise in the emissions efficiency of production) it envisages two further policy stages vital for rich countries: a progressive 'recomposition' of consumption, and a post-growth ceiling on demand. An essential resource for scholars and policymakers. [The Bridge at the Edge of the World](#) - James Gustave Speth 2008-10-01

How serious are the threats to our environment? Here is one measure of the problem: if we continue to do exactly what we are doing, with no growth in the human population or the world economy, the world in the latter part of this century will be unfit to live in. Of course human activities are not holding at current levels—they are accelerating, dramatically—and so, too, is the pace of climate disruption, biotic impoverishment, and toxification. In this book Gus Speth, author of *Red Sky at Morning* and a widely respected environmentalist, begins with the observation that the environmental community has

grown in strength and sophistication, but the environment has continued to decline, to the point that we are now at the edge of catastrophe. Speth contends that this situation is a severe indictment of the economic and political system we call modern capitalism. Our vital task is now to change the operating instructions for today's destructive world economy before it is too late. The book is about how to do that.

Climate Change Solutions -

Diana Stuart 2020-07-17

Climate Change Solutions represents an application of critical theory to examine proposed solutions to climate change. Drawing from Marx's negative conception of ideology, the authors illustrate how ideology continues to conceal the capital-climate contradiction or the fundamental incompatibility between growth-dependent capitalism and effectively and justly mitigating climate change. Dominant solutions to climate change that offer minor changes to the current system

fail to address this contradiction. However, alternatives like degrowth involve a shift in priorities and power relations and can offer new systemic arrangements that confront and move beyond the capital-climate contradiction. While there are clear barriers to a systemic transition that prioritizes social and ecological well-being, such a transition is possible and desirable.

The Political Economy of Low Carbon Transformation

- Harold Wilhite 2016-03-10

Deep reductions in energy use and carbon emissions will not be possible within political economies that are driven by the capitalist imperatives of growth, commodification and individualization. As such, it has now become necessary to understand the relationship between capitalism and the emergence of high energy habits. Using the examples of home energy, transport and food, *The Political Economy of Low Carbon Transformation* articulates the relationship between the politics of

economic expansion and the formation of high-energy habits at the level of family and household. The book elaborates a theory of habit and how it can contribute to this relationship. It critiques mainstream green economy and green energy prescriptions for low carbon transformation that take economic growth for granted and ignore habits formed in a material world designed and built for high energy use. The book explores the growing number of communities around the world that are engaged in collaborative efforts to reform their community and household habits in ways that are less environmentally intrusive. It assesses their potential to make an impact on national and urban low carbon political agendas. The book is aimed at a large and growing interdisciplinary audience interested in the relationship between political economy, consumption and sustainability.

Automobile Politics -

Matthew Paterson 2007-07-19
Examines the role of the car in contemporary society and its

contribution to environmental problems.

The Politics of Green

Transformations - Ian

Scoones 2015-01-09

Multiple 'green transformations' are required if humanity is to live sustainably on planet Earth. Recalling past transformations, this book examines what makes the current challenge different, and especially urgent. It examines how green transformations must take place in the context of the particular moments of capitalist development, and in relation to particular alliances. The role of the state is emphasised, both in terms of the type of incentives required to make green transformations politically feasible and the way states must take a developmental role in financing innovation and technology for green transformations. The book also highlights the role of citizens, as innovators, entrepreneurs, green consumers and members of social movements. Green transformations must be both 'top-down', involving elite alliances between states and

business, but also 'bottom up', pushed by grassroots innovators and entrepreneurs, and part of wider mobilisations among civil society. The chapters in the book draw on international examples to emphasise how contexts matter in shaping pathways to sustainability. Written by experts in the field, this book will be of great interest to researchers and students in environmental studies, international relations, political science, development studies, geography and anthropology, as well as policymakers and practitioners concerned with sustainability.

The Politics of Ecosocialism

- Kajsa Borgnäs 2015-07-24

As the global economy seeks to recover from the financial crisis and warnings about the consequences of climate change abound, it is clear that we need a fundamentally new approach to tackle these issues. This innovative book offers a unique perspective, stressing the necessity of both ecological and social change as it discusses how to create a

"red-green" or "eco-socialist" society. Examining the current crises of welfare capitalism as well as the challenges and conflicts of an eco-socialist society, the book proposes a new social order that would combine the ideals of egalitarianism and of environmental sustainability. It analyses the key social and ecological issues related to the welfare state, including green Keynesianism, ecological Marxism, the limits of growth and no-growth, capitalist barriers to a renewable energy transition, proposals for a universal basic income and the role of technology. Finally, the book outlines possible paths of transformation towards creating an eco-socialist society, drawing out lessons that can be applied internationally. This book will be of great interest to students and researchers in economics, environmental studies and political science.

Capitalism and Climate Change

- Max Koch 2011-10-26

This book discusses climate change as a social issue,

examining the incompatibility of capitalist development and Earth's physical limits and how these have been regulated in different ways. It addresses the links between modes of consumption, energy regimes and climate change during Fordism and finance-driven capitalism.

Climate Crisis and the Global Green New Deal - Noam

Chomsky 2020-09-22

Climate change: watershed or endgame? In this compelling new book, Noam Chomsky, the world's leading public intellectual, and Robert Pollin, a renowned progressive economist, map out the catastrophic consequences of unchecked climate change—and present a realistic blueprint for change: the Green New Deal. Together, Chomsky and Pollin show how the forecasts for a hotter planet strain the imagination: vast stretches of the Earth will become uninhabitable, plagued by extreme weather, drought, rising seas, and crop failure. Arguing against the misplaced fear of economic disaster and

unemployment arising from the transition to a green economy, they show how this bogus concern encourages climate denialism. Humanity must stop burning fossil fuels within the next thirty years and do so in a way that improves living standards and opportunities for working people. This is the goal of the Green New Deal and, as the authors make clear, it is entirely feasible. Climate change is an emergency that cannot be ignored. This book shows how it can be overcome both politically and economically.

The Routledge Handbook of the Political Economy of Science -

David Tyfield 2017-04-28

The political economy of research and innovation (R&I) is one of the central issues of the early twenty-first century. 'Science' and 'innovation' are increasingly tasked with driving and reshaping a troubled global economy while also tackling multiple, overlapping global challenges, such as climate change or food security, global pandemics or energy security. But responding to these

demands is made more complicated because R&I themselves are changing. Today, new global patterns of R&I are transforming the very structures, institutions and processes of science and innovation, and with it their claims about desirable futures. Our understanding of R&I needs to change accordingly. Responding to this new urgency and uncertainty, this handbook presents a pioneering selection of the growing body of literature that has emerged in recent years at the intersection of science and technology studies and political economy. The central task for this research has been to expose important but consequential misconceptions about the political economy of R&I and to build more insightful approaches. This volume therefore explores the complex interrelations between R&I (both in general and in specific fields) and political economies across a number of key dimensions from health to environment, and universities to the military. The Routledge

Handbook of the Political Economy of Science offers a unique collection of texts across a range of issues in this burgeoning and important field from a global selection of top scholars. The handbook is essential reading for students interested in the political economy of science, technology and innovation. It also presents succinct and insightful summaries of the state of the art for more advanced scholars. *Climate Leviathan* - Joel Wainwright 2018-02-13 How climate change will affect our political theory—for better and worse Despite the science and the summits, leading capitalist states have not achieved anything close to an adequate level of carbon mitigation. There is now simply no way to prevent the planet breaching the threshold of two degrees Celsius set by the Intergovernmental Panel on Climate Change. What are the likely political and economic outcomes of this? Where is the overheating world heading? To further the struggle for climate justice, we need to have some

idea how the existing global order is likely to adjust to a rapidly changing environment. *Climate Leviathan* provides a radical way of thinking about the intensifying challenges to the global order. Drawing on a wide range of political thought, Joel Wainwright and Geoff Mann argue that rapid climate change will transform the world's political economy and the fundamental political arrangements most people take for granted. The result will be a capitalist planetary sovereignty, a terrifying eventuality that makes the construction of viable, radical alternatives truly imperative.

Ecology and Socialism - Chris Williams 2010

A timely, well-grounded analysis that reveals an inconvenient truth: we can't save capitalism and save the planet.

Climate Change and the Crisis of Capitalism - Mark Pelling 2012-08-21

Are established economic, social and political practices capable of dealing with the combined crises of climate

change and the global economic system? Will falling back on the wisdoms that contributed to the crisis help us to find ways forward or simply reconfigure risk in another guise? This volume argues that the combination of global environmental change and global economic restructuring require a re-thinking of the priorities, processes and underlying values that shape contemporary development aspirations and policy. This volume brings together leading scholars to address these questions from several disciplinary perspectives: environmental sociology, human geography, international development, systems thinking, political sciences, philosophy, economics and policy/management science. The book is divided into four sections that examine contemporary development discourses and practices. It bridges geographical and disciplinary divides and includes chapters on innovative governance that confront

unsustainable economic and environmental relations in both developing and developed contexts. It emphasises the ways in which dominant development paths have necessarily forced a separation of individuals from nature, but also from society and even from 'self'. These three levels of alienation each form a thread that runs through the book. There are different levels and opportunities for a transition towards resilience, raising questions surrounding identity, governance and ecological management. This places resilience at the heart of the contemporary crisis of capitalism, and speaks to the relationship between the increasingly global forms of economic development and the difficulties in framing solutions to the environmental problems that carbon-based development brings in its wake.. Existing social science can help in not only identifying the challenges but also potential pathways for making change locally and in wider political, economic and cultural systems, but it must do

so by identifying transitions out of carbon dependency and the kind of political challenges they imply for reflexive individuals and alternative community approaches to human security and wellbeing. Climate Change and the Crisis of Capitalism contains contributions from leading scholars to produce a rich and cohesive set of arguments, from a range of theoretical and empirical viewpoints. It analyses the problem of resilience under existing circumstances, but also goes beyond this to seek ways in which resilience can provide a better pathway and template for a more sustainable future. This volume will be of interest to both undergraduate and postgraduate students studying Human Geography, Environmental Policy, and Politics.

Capitalism and Environmental Collapse -

Luiz Marques 2020-08-17

This book intends to be an alert to the fact that the curve measuring environmental costs against the economic benefits of capitalism has irreversibly

entered into a negative phase. The prospect of an environmental collapse has been evidenced by the sciences and the humanities since the 1960s. Today, it imposes its urgency. This collapse differs from past civilizations in that it is neither local nor just civilizational. It is global and occurs at the broadest level of the biosphere, accelerated by the convergence of different socio-environmental crises, such as: Earth energy imbalance, climate change and global warming Sea-level rise Decrease and degradation of forests Collapse of terrestrial and aquatic biodiversity Floods, droughts, wildfires, and extreme weather events Degradation of soils and water resources Increase in pollution caused by fossil fuels and coal Increase in waste production and industrial intoxication

The book is divided in two parts. In the first part it presents a comprehensive review of scientific data to show the already visible effects of each of the different environmental crises and its consequences to

human life on Earth. In the second part, Luiz Marques critically discusses what he calls the three concentric illusions that prevent us from realizing the gravity of the current socio-environmental crises: the illusion of a sustainable capitalism, the illusion that economic growth is still capable of providing more well-being and the anthropocentric illusion. Finally, Marques argues that "fitting" back into the biosphere will only be possible if we dismantle the expansive socioeconomic gear that has shaped our societies since the 16th century by moving from a Social Contract to a Natural Contract, which takes into account the whole biosphere. According to him, the future society will be post-capitalist or it will not be a complex society, and even perhaps, we must fear, no society at all. "This book is backed up with the latest and best science and has made the complexities understandable for the average reader, all in a context of hope for the future."

- William J. Ripple, PhD,

Distinguished Professor of Ecology, Director of the Alliance of World Scientists, Oregon State University

Climate Innovation - N. Harrison 2014-03-19

A comprehensive examination of the inability of liberal capitalism to generate the technological innovations necessary to prevent dangerous climate change. The case is made for the need for institutional evolution to drive the climate innovation, and the potential for climate innovation in an increasingly economically interconnected world.

Capitalism and Climate Change - David Klein 2015

Global Capitalism and Climate Change: The Need for an Alternative World System - Hans A. Baer 2012-06-28

This book constitutes an effort to develop a critical social science of climate change, one that posits its roots in global capitalism with its emphasis on profit-making, a treadmill of production and consumption, heavy reliance on fossil fuels, and commitment to ongoing

economic expansion.

Irrationality of Capitalism and Climate Change - Andrew Kolin 2022-02-07

The irrational social system known as capitalism has, over time, led to the destruction of the environment. A possibility exists to replace capitalism with a form of rational socialism that doesn't necessitate conquering the environment.

The Wrath of Capital - Adrian Parr 2014-09-02

Although climate change has become the dominant concern of the twenty-first century, global powers refuse to implement the changes necessary to reverse these trends. Instead, they have neoliberalized nature and climate change politics and discourse, and there are indications of a more virulent strain of capital accumulation on the horizon. Adrian Parr calls attention to the problematic socioeconomic conditions of neoliberal capitalism underpinning the world's environmental challenges, and she argues that, until we grasp the implications of

neoliberalism's interference in climate change talks and policy, humanity is on track to an irreversible crisis. Parr not only exposes the global failure to produce equitable political options for environmental regulation, but she also breaks down the dominant political paradigms hindering the discovery of viable alternatives. She highlights the neoliberalization of nature in the development of green technologies, land use, dietary habits, reproductive practices, consumption patterns, design strategies, and media. She dismisses the notion that the free market can solve debilitating environmental degradation and climate change as nothing more than a political ghost emptied of its collective aspirations. Decrying what she perceives as a failure of the human imagination and an impoverishment of political institutions, Parr ruminates on the nature of change and existence in the absence of a future. The sustainability movement, she contends, must engage more aggressively with

the logic and cultural manifestations of consumer economics to take hold of a more transformative politics. If the economically powerful continue to monopolize the meaning of environmental change, she warns, new and more promising collective solutions will fail to take root.

Postmodern Climate Change

- Leigh Glover 2007-01-24

A much-needed analysis of international climate change politics as a key issue of modernity and in the context of environmentalism. Leigh Glover presents a new way to understand the climate change problem and is concerned with problems of modernity and postmodernity in the context of contemporary environmental thought. Focusing on the international politics surrounding the UN agreement of climate change, the Framework Convention on Climate Change and its Kyoto Protocol, Glover examines the issue using the key aspects of climate change science, global environmental politics, and global environmental

management.

Imagining Apocalyptic Politics in the Anthropocene

- Earl T. Harper 2021-09-29

Bringing together scholars from English literature, geography, politics, the arts, environmental humanities and sociology, *Imagining Apocalyptic Politics in the Anthropocene* contributes to the emerging debate between bodies of thought first incepted by scholars such as Mouffe, Whyte, Kaplan, Hunt, Swyngedouw and Malm about how apocalyptic events, narratives and imaginaries interact with societal and individual agency historically and in the current political moment. Exploring their own empirical and philosophical contexts, the authors examine the forms of political acting found in apocalyptic imaginaries and reflect on what this means for contemporary society. By framing their arguments around either pre-apocalyptic, peri-apocalyptic or post-apocalyptic narratives and events, a timeline emerges throughout the volume which shows the different

opportunities for political agency the anthropocenic subject can enact at the various stages of apocalyptic moments. Featuring a number of creative interventions exclusively produced for the work from artists and fiction writers who engage with the themes of apocalypse, decline, catastrophe and disaster, this innovative book will be of great interest to students and scholars of the politics of climate change, the environmental humanities, literary criticism and eco-criticism.

This Changes Everything -

Naomi Klein 2014-09-16

Explains why the environmental crisis should lead to an abandonment of "free market" ideologies and current political systems, arguing that a massive reduction of greenhouse emissions may offer a best chance for correcting problems.

After the Anthropocene - Anne

Fremaux 2019-03-25

The environmental crisis is the most prominent challenge humanity has ever had to battle

with, and humanity is currently failing. The Anthropocene—or so called ‘age of humans’—is indeed a period when the survival of humanity has never been so much at risk. This book locates itself in the field of critical green political theory. Fremaux's analysis of the current environmental crisis calls for us to embrace radical shifts in our modes of being; or, in other words, socially progressive innovations that will be described within the unique framework of "Green Republicanism." In offering a constructive and emancipatory delineation of what could be considered an ecological civilization that is respectful of its natural environment and social differences, this book describes how to shift from an ‘arrogant speciesism’ and materialistic lifestyle to a post-anthropocentric ecological humanism focusing on the ‘good life’ within ecological limits. This new political regime calls for a radical reinvention of our societies, a decentering of the humans within our metaphysical worldview, and a

withdrawal of the capitalist technosphere at the benefit of the biosphere. It will require a new economic paradigm that replaces the unsustainable capitalist logic of growth by sustainable degrowth and steady economics. Rooted in ethical thinking and political philosophy, this book seeks to offer a concrete roadmap of how sustainable societies can be fostered.

[The Truth about Energy, Global Warming, and Climate Change](#) -

Jerome R. Corsi 2022-07-26

This book exposes the truth that the climate change hoax is a political movement aimed at eliminating capitalism by spreading alarming disinformation that in order to “save the Earth” from global warming, we must reduce carbon dioxide emissions by switching from hydrocarbon fuels to renewable energies. *The Truth about Energy, Global Warming, and Climate Change: Exposing Climate Lies in an Age of Disinformation* reveals a science-based understanding of Earth’s climate and temperature that Green New

Deal proponents are trying to hide. In the pages of this book, you will see scientifically documented evidence for many facts that the radical left denies. Want to know the truth about how energy, temperature, and climate work? Read *The Truth about Energy, Global Warming, and Climate Change*—but prepare to be shocked. Jerome R. Corsi has conducted a tour-de-force examination of peer-reviewed climate science that exposes the neo-Marxists behind today's anti-capitalist global warming hoax.

Rethinking Capitalism - Michael Jacobs 2016-07-21

"Thought provoking and fresh - this book challenges how we think about economics." Gillian Tett, Financial Times For further information about recent publicity events and media coverage for *Rethinking Capitalism* please visit <http://marianamazucato.com/rethinking-capitalism/> Western capitalism is in crisis. For decades investment has been falling, living standards have stagnated or declined, and

inequality has risen dramatically. Economic policy has neither reformed the financial system nor restored stable growth. Climate change meanwhile poses increasing risks to future prosperity. In this book some of the world's leading economists propose new ways of thinking about capitalism. In clear and compelling prose, each chapter shows how today's deep economic problems reflect the inadequacies of orthodox economic theory and the failure of policies informed by it. The chapters examine a range of contemporary economic issues, including fiscal and monetary policy, financial markets and business behaviour, inequality and privatisation, and innovation and environmental change. The authors set out alternative economic approaches which better explain how capitalism works, why it often doesn't, and how it can be made more innovative, inclusive and sustainable. Outlining a series of far-reaching policy reforms, *Rethinking Capitalism* offers a

powerful challenge to mainstream economic debate, and new ideas to transform it. Green Politics, Green Economics - Palaeologu Athena Palaeologu 2020-07-16

Given the world-wide ecological crisis, to what extent do the current economic systems of production and consumption need to change? To make substantial changes to the dominant economic system as the author proposes, area new politics required? What are the relations between economic and political changes? M. Athena Palaeologu's lucid and engaging analysis offers concrete proposals for moving beyond our current social and environmental impasse. In market-driven economies around the world ecological crises are creating major problems of supply and distribution. The inability of governments to manage these environmental problems both domestically and internationally has led to widespread contradictions between public rhetoric and political practice. A growing number of

contemporary publications respond to these crises by advocating a successful marriage of the corporate marketplace with the goals of environmentalism, in a marketing landscape where large and small corporations are tripping over each other to present their "e;green"e;credentials. M. Athena Palaeologu's timely work Green Politics, Green Economics examines these apologetic responses to broach an uncomfortable but fundamental question-is long-term and sustainable development really possible under market capitalism? Palaeologu develops two alternative approaches to these environmental challenges: (i) a"e;green politics"e;that places major importance on achieving ecological goals through grassroots participatory citizen involvement, drawing heavily on values shared with feminist and social movements, and; (ii) a"e;green economics"e;that address the dynamic and spatial interdependence between human economies and

the natural ecosystems which sustain them. The focus of both of these approaches is the "e;scale"e;conundrum: how are we to implement a green economics capable of realising development within the ecological constraints of our planet's biosphere?

In Search of Climate Politics -

Matthew Paterson 2021-07-31

In what ways is climate change political? This book addresses this key - but oddly neglected - question. It argues that in order to answer it we need to understand politics in a three-fold way: as a site of authoritative, public decision-making; as a question of power; and as a conflictual phenomenon. Recurring themes center on de- and re-politicization, and a tension between attempts to simplify climate change to a single problem and its intrinsic complexity. These dynamics are driven by processes of capital accumulation and their associated subjectivities. The book explores these arguments through an analysis of a specific city - Ottawa - which

acts as a microcosm of these broader processes. It provides detailed analyses of conflicts over urban planning, transport, and attempts by city government and other institutions to address climate change. The book will be valuable for students and researches looking at the politics of climate change.

Climate Change as Class War -

Matthew T. Huber 2022-05-10

How to build a movement to confront climate change The climate crisis is not primarily a problem of 'believing science' or individual 'carbon footprints' - it is a class problem rooted in who owns, controls and profits from material production. As such, it will take a class struggle to solve. In this ground breaking class analysis, Matthew T. Huber argues that the carbon-intensive capitalist class must be confronted for producing climate change. Yet, the narrow and unpopular roots of climate politics in the professional class is not capable of building a movement up to this challenge. For an alternative strategy, he

proposes climate politics that appeals to the vast majority of society: the working class. Huber evaluates the Green New Deal as a first attempt to channel working class material and ecological interests and advocates building union power in the very energy system we need to dramatically transform. In the end, as in classical socialist movements of the early 20th Century, winning the climate struggle will need to be internationalist based on a form of planetary working class solidarity.

The Limits to Capitalist Nature -

Ulrich Brand 2018-03-12

Offers an understanding of the multiple crises of capitalism, focusing on the ecological crisis and its interaction with other crisis phenomena (financial crisis, crisis of democracy, economic crisis).

Climate Capitalism - Peter

Newell 2010-05-27

Explores how we should react to the political dilemmas of adapting the global economy to confront climate change.

The Great Adaptation - Romain

Felli 2021-07-20

When capitalism doesn't fight climate change but rather tries to make a buck out of it The Great Adaptation tells the story of how scientists, governments and corporations have tried to deal with the challenge that climate change poses to capitalism by promoting adaptation to the consequences of climate change, rather than combating its causes. From the 1970s neoliberal economists and ideologues have used climate change as an argument for creating more "flexibility" in society, that is for promoting more market-based solutions to environmental and social questions. The book unveils the political economy of this potent movement, whereby some powerful actors are thriving in the face of dangerous climate change and may even make a profit out of it.

Facing the Anthropocene -

Ian Angus 2016-07-01

Science tells us that a new and dangerous stage in planetary evolution has begun—the Anthropocene, a time of rising temperatures, extreme weather, rising oceans, and

mass species extinctions. Humanity faces not just more pollution or warmer weather, but a crisis of the Earth System. If business as usual continues, this century will be marked by rapid deterioration of our physical, social, and economic environment. Large parts of Earth will become uninhabitable, and civilization itself will be threatened. Facing the Anthropocene shows what has caused this planetary emergency, and what we must do to meet the challenge. Bridging the gap between Earth System science and ecological Marxism, Ian Angus examines not only the latest scientific findings about the physical causes and consequences of the Anthropocene transition, but also the social and economic trends that underlie the crisis. Cogent and compellingly written, *Facing the Anthropocene* offers a unique synthesis of natural and social science that illustrates how capitalism's inexorable drive for growth, powered by the rapid burning of fossil fuels that took millions of years to form, has

driven our world to the brink of disaster. Survival in the Anthropocene, Angus argues, requires radical social change, replacing fossil capitalism with a new, ecosocialist civilization. [Climate Change, Capitalism, and Corporations](#) - Christopher Wright 2015-09-23
Climate change is one of the greatest threats facing humanity, a definitive manifestation of the well-worn links between progress and devastation. This book explores the complex relationship that the corporate world has with climate change and examines the central role of corporations in shaping political and social responses to the climate crisis. The principal message of the book is that despite the need for dramatic economic and political change, corporate capitalism continues to rely on the maintenance of 'business as usual'. The authors explore the different processes through which corporations engage with climate change. Key discussion points include climate change as business risk, corporate climate politics, the role of

justification and compromise, and managerial identity and emotional reactions to climate change. Written for researchers and graduate students, this book moves beyond descriptive and normative approaches to provide a sociologically and critically informed theory of corporate responses to climate change.

This Changes Everything - Naomi Klein 2015-08-04

The best-selling author of *The Shock Doctor* explains why the environmental crisis challenges us to abandon "free market" ideologies and remake political systems, arguing that a massive reduction of greenhouse emissions may offer a best chance for correcting economic challenges. 150,000 first printing.

Urban Sprawl, Global Warming, and the Empire of Capital -

George A. Gonzalez 2009-03-05

Argues that the United States refuses to address global warming because of the reliance of the American economy on urban sprawl.

The Political Economy of Global Warming - Del Weston

2014-04-11

Humanity is facing an unprecedented global catastrophe as a result of global warming. This book examines the reasons why international agencies, together with national governments, are seemingly unable to provide real and binding solutions to the problems. The reasons presented relate to the existing dominant global economic structure of capitalism as well as the fact that global warming is too often seen as an isolated problem rather than one of a suite of exceptional, converging and accelerating crises arising from the global capitalist political economy. This book adopts a political economy framework to address these issues. It accepts the science of global warming but challenges

the predominant politics and economics of global warming. To illustrate the key issues involved, the book draws on South Africa – building on Samir Amin's thesis that the country represents a microcosm of the global political economy. By taking a political economy approach, the book provides a clear explanation of the deep and pervasive problem of the denial which fails to acknowledge global warming as a systemic rather than a market problem. The book should be of interest to students and scholars researching climate change, environmental politics, environmental and ecological economics, development studies and political economics.

Dust Bowls of Empire -

Hannah Holleman 2018-11-20

A profound reinterpretation of both the Dust Bowl on the U.S. southern plains and its relevance for today. The 1930s witnessed a harrowing social and ecological disaster, defined by the severe nexus of drought, erosion, and economic depression that ravaged the

U.S. southern plains. Known as the Dust Bowl, this crisis has become a major referent of the climate change era, and has long served as a warning of the dire consequences of unchecked environmental despoliation. Through innovative research and a fresh theoretical lens, Hannah Holleman reexamines the global socioecological and economic forces of settler

colonialism and imperialism precipitating this disaster, explaining critical antecedents to the acceleration of ecological degradation in our time. Holleman draws lessons from this period that point a way forward for environmental politics as we confront the growing global crises of climate change, freshwater scarcity, extreme energy, and soil degradation.
