Sourcebook for the History of the Philosophy of Mind - Simo Knuuttila 2013-10-23

Fresh translations of key texts, exhaustive coverage from Plato to Kant, and detailed commentary by expert scholars of philosophy add up to make this sourcebook the first and most comprehensive account of the history of the philosophy of mind. Published at a time when the philosophy of mind and philosophical psychology are high-profile domains in current research, the volume will inform our understanding of philosophical questions by shedding light on the origins of core conceptual assumptions often arrived at before the instauration of psychology as a recognized subject in its own right. The chapters closely follow historical developments in our understanding of the mind, with sections dedicated to ancient, medieval Latin and Arabic, and early modern periods of development. The volume's structural clarity enables readers to trace the entire progression of philosophical understanding on specific topics related to the mind, such as the nature of perception. Doing so reveals the fascinating contrasts between current and historical approaches. In addition to its all-inclusive source material, the volume provides subtle expert commentary that includes critical introductions to each thematic section as well as detailed engagement with the central texts. A voluminous bibliography includes hundreds of primary and secondary sources. The sheer scale of this new publication sheds light on the progression, and discontinuities, in our study of the philosophy of mind, and represents a major new sourcebook in a field of extreme importance to our understanding of humanity as a whole.

Emotions in Ancient and Medieval Philosophy - Professor of Theological Ethics and the Philosophy of Religion Simo Knuuttila 2004
The first part of the book covers the theories of the emotions of Plato and Aristotle and later ancient views from Stoicism to Neoplatonism (Ch. 1) and their reception and transformation by early Christian thinkers from Clement and Origen to Gregory of Nyssa, Cassian and Augustine (Ch. 2). The basic ancient alternatives were the compositional theories of Plato and Aristotle and their followers and the Stoic judgement theory. These were associated with different conceptions of philosophical therapy. Ancient theories were employed in early Christian discussions of sin, Christian love, mystical union, and other forms of spiritual experience. The most influential theological themes were the monastic idea of supernaturally caused feelings and Augustine's analysis of the relations between the emotions and the will. The first part of Ch. 3 deals with the twelfth-century reception of ancient themes through monastic, theological, medical, and philosophical literature. The subject of the second part is the theory of emotions in Avicenna's faculty psychology, which, to a great extent, dominated the philosophical discussion of emotions in early thirteenth century. This approach was combined with Aristotelian ideas in later thirteenth century, particularly in Thomas Aquinas' extensive taxonomical theory. The increasing interest in psychological voluntarism led many Franciscan authors to abandon the traditional view that emotions belong only to the lower psychosomatic

level. John Duns Scotus, William Ockham and their followers argued that there are also emotions of the will. Chapter 4 is about these new issues introduced in early fourteenth-century discussions, with some remarks on their influence on early modern thought.
