Grow a Living Wall - Shawna Coronado
2015-02-15

Sometimes called "Green Walls" or
"Vertical Gardens," living walls are
easier than ever to plan and grow!
Grow a Living Wall is the first wall-
gardening book to focus exclusively
on the needs of home gardeners. Make
your vertical garden environmentally
friendly and sustainable. It's easy
with author Shawna Coronado's help!

One of her themed vertical gardens is
stocked mostly with flowers to make
it a haven for bees and other
pollinators. Other gardens are filled
with vegetables and herbs so anyone
with an outdoor wall can grow their
own food - beautifully! Even more
gardens promote aromatherapy or
medicinal plants. Some are designed
to provide a green net of air
filtration near a living area, or to
protect exterior walls from exposure
to direct sunlight, which helps to
keep the indoors cool. In addition to
the comprehensive, step-by-step
information that explains the basics
of vertical gardening, each of the 20
featured gardens has its own chapter
filled with useful tips, stunning
photography, and fascinating
background stories that point out how
much difference a small garden can

make. Like author Shawna herself, the gardens you'll find in Grow a Living Wall are positive, life affirming, and sure to produce a smile or two. *World Congress on Medical Physics and Biomedical Engineering September 7 - 12, 2009 Munich, Germany* - Olaf Dössel 2010-01-04

Present Your Research to the World! The World Congress 2009 on Medical Physics and Biomedical Engineering – the triennial scientific meeting of the IUPESM - is the world's leading forum for presenting the results of current scientific work in health-related physics and technologies to an international audience. With more than 2,800 presentations it will be the biggest conference in the fields of Medical Physics and Biomedical Engineering in 2009! Medical physics, biomedical engineering and

bioengineering have been driving forces of innovation and progress in medicine and healthcare over the past two decades. As new key technologies arise with significant potential to open new options in diagnostics and therapeutics, it is a multidisciplinary task to evaluate their benefit for medicine and healthcare with respect to the quality of performance and therapeutic output. Covering key aspects such as information and communication technologies, micro- and nanosystems, optics and biotechnology, the congress will serve as an inter- and multidisciplinary platform that brings together people from basic research, R&D, industry and medical application to discuss these issues. As a major event for science,

medicine and technology the congress provides a comprehensive overview and in-depth, first-hand information on new developments, advanced technologies and current and future applications. With this Final Program we would like to give you an overview of the dimension of the congress and invite you to join us in Munich! Olaf Dössel Congress President Wolfgang C.

Energy Efficiency in Household Appliances - Paolo Bertoldi
2012-12-06

There is widespread interest throughout the world in improving appliance energy efficiency. Methods to reach that end include energy labeling, energy efficiency standards and market conditioning (e.g, energy efficient procurement and DSM programs). Energy efficiency standards, which started out as an action to reduce demand for energy in individual countries, has now become a subject of regional and even worldwide dimension, particularly in the context of global climate change mitigation. Mandatory energy efficiency standards are in place for some appliances in China, Canada, Mexico, the Philippines and the United States. Standards for refrigerator/freezers will take effect in Australia and the European Union in 1999. Voluntary energy

efficiency standards are in place for refrigerators in Brazil, India and Korea and for air conditioners in India, Japan and Korea. Table I showed potential global energy use reductions from codes and standards in buildings. If individual country data can be assembled, a more accurate approach to estimating potential reductions in energy use and carbon emissions would be to perform a bottom-up analysis for energy using equipment on an end-use basis in as many large developing countries as possible. The impact of standards would be assessed as more efficient appliances replaced existing stock models and new purchases that increased saturation rates were made at higher efficiencies than would otherwise be the case. This approach would show

the slow but steady buildup of annual energy savings from efficiency standards or other programs to improve energy efficiency.
