The monography entitled "Human Atlas of Topographical, Functional and Clinical Anatomy Viscera" developed by a prestigious collective coordinated by Acad. Prof. PhD. M.D. Mircea Ifrim, is an absolute editorial novelty. The approach of numerous aspects of the complexity of "the human phenomenon," which is the object of anthropology, is original through multiple aspects, out of which we mention the metapsychological one, and at the same time, a reality that defines the constitutional typology in which we find multiple unknown data. At the same time, it is a reality which defines the constitutional

typology. This monography contains fundamental elements, many resulting from both practical experience and author's own research. The coordinator of this monography is Acad. Prof. PhD.
