Over the last century there has been a complete transformation of the fashion system. The unitary top-down fashion cycle has been replaced by the pulsations of multiple and simultaneous styles, while the speed of global production and circulation has become ever faster and more complex. Running in tandem, the development of artificial fibres has revolutionized the composition of clothing, and the increased focus on youth, sexuality, and the body has radically changed its design. From the 1920s flapper dress to debates over the burkini, fashion has continued to be deeply involved in society's larger issues. Drawing on a wealth of visual, textual and object sources and illustrated with 100 images, A Cultural History of Dress and Fashion in the Modern Age presents essays on textiles, production and distribution, the body, belief, gender and sexuality, status, ethnicity, and visual and literary representations to illustrate the diversity and cultural significance of dress and fashion in the period.

*Fashion Design for Living* - Alison Gwilt 2014-11-13

*Fashion Design for Living* explores the positive contribution that the contemporary fashion designer can make within society. The book seeks to reveal new ways of designing and making fashion garments and products that not only enhance and enrich our lives, but also are mindful of social and sustainable issues. This book sets out to question and challenge the dominant, conventional process of fashion design that as a practice has been under-researched. While the fashion designer in industry is primarily concerned with the creation of the new seasonal collection, designed, produced and measured by economically driven factors, society increasingly expects the designer to make a positive contribution to our social, environmental and cultural life. Consequently an emergent set of designers and research-based practitioners are beginning to explore new ways to think about fashion designing. The contributors within this book argue that fashion designing should move beyond developing garments that are just aesthetically pleasing or inexpensive, but also begin to consider and respond to the wearer's experiences, wellbeing, problems, desires and situations, and their engagement with and use of a garment. *Fashion Design for Living* champions new approaches to fashion practice by uncovering a rich and diverse set of views and reflective experiences which explore the changing role of the fashion designer and inspire fresh, innovative and creative responses to fashion and the world we live in.

*Recycling from Waste in Fashion and Textiles* - Pintu Pandit 2020-07-15

The alarming level of greenhouse gases in the environment, fast depleting natural resources and the increasing level of industrial effluents, have made every single manufacturing activity come under the scrutiny of sustainability. When all kinds of waste such as clothes, furniture, carpets, televisions, shoes, paper, food wastes etc. end up in the landfill, only a few of them are naturally decomposed and thus a large majority remains as non-biodegradable. It is for this reason, efforts are concentrated to reduce the burden on earth by this waste, and as far as used textile products are concerned, there are now attempts to recycle or up-cycle. This book addresses the role of sustainability by using textile waste in fashion and textiles with respect to manufacturing, materials, as well as the economic and business challenges and opportunities it poses. This wide-ranging book comprises 19 chapters on the various topics including: · Solutions for sustainable fashion and textile industry · Agro and bio waste in the fashion industry · Innovating fashion brands by using textile waste · Waste in handloom textiles · Business paradigm shifting: 21st century fashion from recycling and upcycling · Utilization of natural waste for sustainable textile coloration · Circular economy in fashion and textile from waste · Future pathways of waste utilization for fashion · Sustainable encapsulation of natural dyes from Plant waste for textiles · Agro-waste applications for bio-remediation of textile effluent

Textile-Based Advanced Materials - Thomas Bechtold 2021-03-17

Developments in the science and technology of textiles are not only limited to apparel and fashion. Certainly, there are research efforts aimed at improving the construction and processing of textiles for clothing—such as studies on cleaner production to reduce environmental impact, increasing the utilization of fibers and process chemicals from renewable resources, and on the recycling of materials from post-consumer waste apparel back into the manufacturing of new clothing

articles. In addition, technological concepts developed for the creation of clothing over the centuries are now being investigated for use in a diverse array of fields—such as in the manufacture of engineering composites, personal protective equipment, and medicine. Further, developments in other fields—such as electronics, nanotechnology, and information and communication technologies—are being investigated for their incorporation into apparel and clothing to create “smart textiles”. The aim of this Special Issue is to put together a collection of scientific reports on such efforts to highlight the range of scientific and technological issues that are being targeted and the ingenuity of the methodologies employed to find answers. It is hoped that readers of this issue will come away with an appreciation of the research being conducted in this area, and perhaps gain inspiration for their own scientific endeavors.
