Guidance on transport assessment - Great Britain: Department for Transport 2007-03-07 Planning Policy Guidance Note 13: Transport (PPG13) (2001, ISBN 9780117535589) states that, where a new development is likely to have significant transport implications, a Transport Assessment (TA) should be prepared and submitted with a planning application for the development. It will then be used to determine whether the impact of the development on transport is acceptable. TAs are normally produced by developers and are used by decision makers in the planning process. A TA is a comprehensive and systematic process that sets out transport issues relating to a proposed development. It identifies what measures will be

taken to deal with the anticipated transport impacts of the scheme and to improve accessibility and safety for all modes of travel, particularly for alternatives to the car such as walking, cycling and public transport. In some cases, the transport issues arising out of development proposals may not require a full TA to inform the process adequately and identify suitable mitigation. In these instances, it has become common practice to produce a simplified report in the form of a Transport Statement (TS). This document, *Guidance on Transport Assessment (GTA)*, is intended to assist stakeholders in determining whether an assessment may be required and, if so, what the level and scope of that assessment should be. It provides guidance on the content and preparation of TAs and TSs. This guidance applies to England only.
