***Ethics and Practice in Science Communication*** - Susanna Priest  
2018-03-07

From climate to vaccination, stem-cell research to evolution, scientific work is often the subject of public controversies in which scientists and science communicators find themselves enmeshed. Especially with such hot-button topics, science communication plays vital roles. Gathering together the work of a multidisciplinary, international collection of scholars, the editors of *Ethics and Practice in Science Communication* present an enlightening dialogue involving these communities, one that articulates the often differing objectives and ethical responsibilities communicators face in bringing a range of scientific knowledge to the wider world. In three sections—how ethics matters, professional practice, and case studies—contributors to this volume explore the many complex questions surrounding the communication of scientific results to nonscientists.

Has the science been shared clearly and accurately? Have questions of risk, uncertainty, and appropriate representation been adequately addressed? And, most fundamentally, what is the purpose of communicating science to the public: Is it to inform and empower? Or to persuade—to influence behavior and policy? By inspiring scientists and science communicators alike to think more deeply about their work, this book reaffirms that the integrity of the communication of science is vital to a healthy relationship between science and society today.

This book takes a fresh look at development communication in the Indian context. Charting its international history and discussing the Millennium Development Goals (MDGs) that evolved as part of the phenomenon of globalization, it links the history of India's development with development communication and discusses the role of media in disseminating information to the public. *Development Communication in Practice: India and the Millennium Development Goals* analyzes seven Indian newspapers for a period of seven months and evaluates the extent to which development issues are addressed in them. The findings reveal an under-representation of development issues in the media which, the author argues, needs to be addressed. Reviewing recent concepts on poverty measurement and the MDGs set forth by global scholars such as Jagdish Bhagwati, Amartya Sen and Joseph Stiglitz, the book acknowledges the importance of information technology, literacy and education in the process of development. Science Communication Practice in China - Fujun Ren 2021-11-26  
China has made remarkable and rapid progress in the area of science communication, both in theory and practice. This book critically examines all aspects of science communication practices in China. Dealing with major turning points since the introduction of the 'Science and Technology Popularization Law' and the 'Outline of the National Scheme for Scientific Literacy', the book tells a success story by scrutinizing structural changes in science communication policies, education system, construction and efficacious utilisation of science popularisation facilities, and creative use of a mix of traditional and modern channels of communication. The book also gives an in-depth analysis of the monitoring and evaluation mechanism, which constitutes the backbone of the national science communication

project. The historical roots of science communication in China include shifts in methodologies, policy instruments, effectual approaches and resultant practices since the days of initial efforts to popularise modern scientific ideas. However, the primary focus of the book remains on the initiatives launched at the turn of the present century. Without losing sight of the national dimensions, each chapter of the book draws from provincial as well as grassroots level experiences. Quantitative and qualitative methods have been used to analyse strengths, weaknesses, hurdles and the efficacy of corrective measures. This book offers a remarkable insight to anyone who is interested in probing the causal relationship between science communication and China's transformation into a modern society. The primary objective of the book is to analyse the nature of 'science communication with Chinese characteristics' and the specificity of the socio-cultural environment in which Science and Technology is located. Though the book is of particular interest to scholars, researchers, students and practitioners of science communication, the narrative style makes it accessible to the general reader who is interested in science-society relationship.

Strategic Communication Theory and Practice - Carl H. Botan 2017-12-18  
A guide to strategic communication that can be applied across a range of subfields at all three levels—grand strategic, strategic, and tactical communication Communication is a core function of every human organization so when you work with communication you are working with the very core of the organization. Written for students, academics, and professionals, Strategic Communication Theory and Practice: The Cocreative Model argues for a single unified field of strategic communication based in the three large core subfields of public relations, marketing communication, and health communication, as well as strategic communicators working in many other subfields such as

political communication, issues management, crisis communication, risk communication, environmental and science communication, social movements, counter terrorism communication, public diplomacy, public safety and disaster management, and others. Strategic Communication Theory and Practice is built around a cocreative model that shifts the focus from organizational needs and the messages crafted to achieve them, to a publics-centered view placing publics and their ability to cocreate new meanings squarely in the center of strategic communication theory and practice. The author—a noted expert in the field—outlines the theories, campaign strategies, common issues, and cutting edge challenges facing strategic communication, including the role of social media, ethics, and intercultural strategic communication. As the author explains, the term "strategic communication" properly refers only to the planned campaigns that grow out of research and understanding what publics think and want. This vital resource answers the questions of whether, and how, strategic-level skills can be used across fields, as it: Explores the role of theory and the cocreative meta-theory in strategic communication Outlines ethical practices and problems in the field Includes information on basic campaign strategies Offers the most recent information on risk communication, preparedness and terrorism communication, and employment in strategic communication Redefines major concepts, such as publics, from a cocreative perspective

[A Paradigm for Business Communication across Cultures: Theoretical Highlights for Practice](#) - Dr.

Yongqiang LIU 2015

Today's global citizens operate business and management endeavors on a global scale. Globalization generates an increasing demand for effective communication in diverse cultural contexts and challenges the relevance of culture in operating businesses in the global village. Communication differences are apparent in many scenarios.

Expatriates of international organizations operating abroad adopt their native cultural values to motivate employees of foreign cultures with an entirely different perspective. They use one culture's motives to move people from other cultures. In global marketing

communication, the communicators use values systems of their native culture to develop advertising for other cultures. They use categorizations of one culture to describe others. Such divergence in attitudes, perspectives and priorities of suppliers, and customers with different cultural backgrounds have led to many project failures in international organizations. An in-depth understanding of cultural backgrounds and the potential impact on communication of the people one is interacting with can increase the probability of business success among investors, managers, entrepreneurs and employees operating in diverse cultures. However, effective cross cultural business communication needs to recognize and adopt an interdisciplinary perspective in understanding the cultural forces (Leung, K. et al., 2005). Therefore, we need a multidisciplinary paradigm to carry on effective and successful business communication in our contemporary global village. ?????????

Tandy Deane-Grey, Senior Midwifery Lecturer, University of Hertfordshire, UK "This comprehensive and reader friendly text ... utilises a variety of strategies to aid understanding and application to practice.
