Back To Basics - Orchid Lee Lopez 2011-02-15

As a registered nurse for the last 28 years, my primary clinical expertise has been working in the pre-hospital environment as a flight nurse and a paramedic, as well as continuing to work in a variety of clinical areas which include the emergency department, pediatrics and endoscopy. My extensive clinical background has also given me the opportunity to work as a legal nurse consultant with one of the largest law firms in Arizona. As an EMS educator and program director of paramedic training programs for the last 20 years and most recently as the National Clinical Educator for one of the largest air medical transport companies, I truly enjoy teaching in a simple manner as to assure that students do have a strong basic understanding in making critical care decisions and that they will be providing the highest quality of patient care beginning from the least to the most invasive management of care for the patients they are transporting. My goal as a professional and as an EMS educator has always been and will continue to encourage students to have the desire to learn and grow in their profession, as well as contribute to EMS in a way that inspires positive change. Firearm Safety Certificate - Manual for California Firearms Dealers and DOJ Certified Instructors - California Department of Justice 2016-12

The growing concern over the number of accidental firearm shootings, especially those involving children, prompted passage of the initial handgun safety law which went into effect in 1994. The stated intent of the California Legislature in enacting the current FSC law is for persons who obtain firearms to have a basic familiarity with those firearms, including, but not limited to, the safe handling and storage of those firearms. The statutory authority for this program is contained in Penal Code sections 26840 and 31610 through 31700. These statutes mandate DOJ to develop, implement and maintain the FSC Program. Pursuant to Penal Code section 26840, a firearms dealer cannot deliver a firearm unless the person receiving the firearm presents a valid FSC, which is obtained by passing a written test on firearm safety. Prior to taking delivery of a firearm from a licensed firearms dealer, the purchaser/recipient must also successfully perform a safe handling demonstration with that firearm..

Pharmacology Review - A Comprehensive Reference Guide for Medical, Nursing, and Paramedic Students - S. Meloni 2021-02-07

Pharmacology doesn't have to be hard! Here's why: At Medical Creations, we are firm believers of the notion that the best way to learn a new topic is first to understand the fundamentals. Once you know the fundamentals, you will be able to understand the bigger picture. If you don't understand the bigger picture, forcing yourself to memorize any details becomes that much harder. Our Pharmacology book is meant to give you a good understanding of the topic before you can dive into the details with other, more extensive pharmacology books. The goal is to have you understand rather than memorize. It's a great alternative to the thicker and more expensive pharmacology books if you are studying for an exam and you just want a quick recap, or if you are just starting out and you want an overview. The purpose of this pharmacology book is to serve as a

reference manual and a comprehensive study guide for medical, nursing, and paramedic students. For easy understanding of this complex subject, the book has been divided into multiple units based on each body system. The addition of multiple-choice questions will make it easier for you to remember the information from previous chapters. The key therapeutic drug classes for each major system have been outlined in separate chapters. Bullet points and tables make the content easy to understand. Pharmacology is a constantly evolving field, and new drugs are being developed every day. The main aim of this book is to familiarize the reader with the different categories of drugs. The most commonly prescribed drugs are described here, but the book is by no means exhaustive and does not cover all the drugs available today. For detailed descriptions of the latest drugs on the market, and less commonly prescribed drugs, the reader is referred to one of the more exhaustive textbooks of pharmacology. This book will help you: * ..Have a clear understanding of pharmacology * ..Learn about different groups of drugs, the pharmacokinetics, and the pharmacodynamics * ..Find pharmacology much more bearable Go to the top-right of the page and click "Add to Cart"

Critical Care Study Guide - Gerard J. Criner 2010-06-27

Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states require extensive knowledge and up-to-date clinical information. An extensive knowledge of basic pathophysiology, as well as awareness of the appropriate diagnostic tests and treatments that are used to optimize care in the critically ill is essential. Since our first edition 7 years ago, new information crucial to the care and understanding of the critically ill patient has rapidly accumulated. Because this knowledge base crosses many different disciplines, a comprehensive multidisciplinary approach presenting the information is essential, similar to the multidisciplinary approach that is used to care for the critically ill patient. We have strived to provide this content in an easily digestible format that uses a variety of teaching tools to facilitate understanding of the presented concepts and to enhance information retention. To meet the demand to provide comprehensive and diverse education in order to understand the pathogenesis and optimum care of a variety of critical illnesses, we have substantially revised the prior topics in the first edition with updated information. We have also markedly expanded the number of topics covered to include acute lung injury and the acute respiratory distress syndrome, an expanded discussion of the physiology and operation of mechanical ventilation, obstetrical care in the ICU, neurosurgical emergencies, acute coronary syndromes, cardiac arrhythmias, role of whole body rehabilitation in the ICU, ethical conduct of human research in the ICU, and nursing care of the ICU patient.

[Emergency Response Guidebook](#) - U.S. Department of Transportation 2013-06-03

highway that was leaking, would you be able to identify if it was hazardous and know what steps to take? Questions like these and more are answered in the Emergency Response Guidebook. Learn how to identify symbols for and vehicles carrying toxic, flammable, explosive, radioactive, or otherwise harmful substances and how to respond once an incident involving those substances has been identified. Always be prepared in situations that are unfamiliar and dangerous and know how to rectify them. Keeping this guide around at all times will ensure that, if you were to come upon a transportation situation involving hazardous substances or dangerous goods, you will be able to help keep others and yourself out of danger. Paediatric and Neonatal Critical Care Transport - Peter Barry
2003-04-18

Sick babies and children are moved between hospitals for many reasons, often to receive specialist care and treatment not available locally. For the transfer to be safe and effective it is necessary to plan carefully for these occasions, and for the doctors and nurses attending the transport to be able to provide intensive care on the move. The book provides guidance in both of these major areas. The first section - 'Planning for Safe and Effective Transport' - details issues to be considered by senior staff in setting-up or modernising a transport programme. General principles and relevant physiology are outlined, and vehicles and equipment are discussed in depth. The second section - 'Practical Transport Management' - is concerned with different patient groups and key clinical issues. These include the distinctive features of neonatal and paediatric patients, and management of airway, breathing and circulation. Other chapters discuss airborne transport, pharmacology, trauma, and special interventions for transport such as extracorporeal membrane oxygenation and inhaled nitric oxide.
