**The Concept of Nature in Literature: Analysis of Doris Lessing's**

**"The De Wets Come to Kloof Grange"** - Anonym 2010-03

Essay from the year 2009 in the subject English - Literature, Works, grade: 2, University of Munster, language: English, abstract:

Ecocriticism is still on its academic margins. Nevertheless, depending on the text one deals with, nature plays a vital role in understanding and analyzing literature.<sup>1</sup> The present essay focuses on the views of nature in the short story "The De Wets come to Kloof Grange" by Doris Lessing.<sup>2</sup> The Dictionary defines nature as "everything that exists in the world independently of people, such as plants and animals, earth and rocks, and the weather"<sup>3</sup>. Yet, in order to analyze nature in its literary context, it is important to point out that culture has a great impact on nature and its understanding.<sup>4</sup> To analyze the view of nature, it is vital to recognize that the nature-culture distinction is not always absolute and clear cut.<sup>5</sup> There is nature, and culture, and states partaking in both. Barry introduces the "outdoor environment [...] [as a] series of adjoining and overlapping areas which move gradually from nature to culture"<sup>6</sup>. To answer the question how nature is displayed within the story and hence to be able to draw a conclusion from these particular views of nature, different areas will be used to classify nature in its cultural context. Taking Barry's classification<sup>7</sup> into account, the view of nature in the story "The De Wets come to Kloof Grange"<sup>8</sup> will in the following be associated with three distinctive areas. Area one is referred to as the scenic sublime. It includes, for instance, forests, mountains and rivers. Moreover, there is area two, the countryside, which implies hills, fields, woods, etc. The greatest impact of culture can be found in area three, the domestic picturesque. It describes such things as parks and gardens.

Road Traffic Injury Prevention Training Manual - Dinesh Mohan 2006

Road traffic collisions kill about 1.2 million people around the world every year but they are largely neglected as a health and development issue, perhaps because they are still viewed by many as being beyond human control. Efforts to prevent road traffic injuries are hampered by a lack of human capacity. Policy-makers, researchers and practitioners need information on effective prevention measure and on how to develop, implement and evaluate such interventions. There is a need to train more specialists in road traffic injury prevention in order to address the growing problem of road traffic injuries at international levels.

**Guidelines for Trauma Quality Improvement Programmes** - World Health Organization 2009

In order to promote greater implementation of effective, affordable and sustainable trauma systems globally, the World Health Organization and the International Association for Trauma Surgery and Intensive Care have worked collaboratively to produce these guidelines on trauma quality improvement. The response to the growing problem of injury needs to include the improvement of care of the injured. Quality improvement (QI) programs offer an affordable and sustainable means to implement such improvements. These programs enable health care institutions to better monitor trauma care services, better detect problems in care, and more effectively enact and evaluate corrective measures targeted at these problems. The goal of this publication is to give guidance on ways in which health care institutions globally can implement QI programs oriented to strengthening care of the injured. This guidance is intended to be universally applicable to all countries, no matter what their economic level. These guidelines provide basic definitions and an overview of the field of QI, so that those not familiar with this field will have a working knowledge of it. Evidence of the benefit of QI in general and trauma QI in particular is then laid out. The main part of the publication reviews the most common methods of trauma QI, written in a how-do-to fashion. This covers a wide range of techniques. The first two of these are especially emphasized as ways in which to strengthen trauma QI in the setting of low-income and middle-income countries.
