*Narratives in Research and Interventions on Cyberbullying among Young People* - Heidi Vandebosch 2019-01-23

This book describes innovative ways to do research about, and design interventions for, cyberbullying by children and adolescents. It does this by taking a narrative approach. How can narrative research methods complement the mostly quantitative methods (e.g. surveys, experiments, ....) in cyberbullying research ? And how can stories be used to inform young people about the issue and

empower them? Throughout the book, special attention is paid to new information and communication technologies, and the opportunities ICTs provide for narrative research (e.g. as a source of naturally occurring stories on cyberbullying), and for narrative health interventions (e.g. via Influencers). The book thus integrates research and insights from the fields of cyberbullying, narrative methods, narrative health communication, and new information and communication technologies.

Cyberbullying Prevention and Response - Justin W. Patchin 2012-03-28

Just as the previous generation was raised in front of televisions, adolescents at the turn of the 21st century are being raised in an internet-enabled world where blogs, social networking, and instant messaging are competing with face-to-face and telephone communication as the dominant means through which personal interaction takes place. Unfortunately, a small but growing proportion of our youth are being exposed online to interpersonal violence, aggression, and harassment via cyberbullying. The mission of this book is to explore the many critical issues surrounding this new phenomenon. Key features include the following. Comprehensive – The book provides a

comprehensive, up-to-date look at the major issues that teachers, school administrators, counsellors, social workers, and parents need to be aware of with respect to cyberbullying identification, prevention, and response. Practical – While the information is informed by research, it is written in an accessible way that all adults will be able to understand and apply. Expertise – Justin W. Patchin and Sameer Hinduja are Co-Directors of the Cyberbullying Research Center ([www.cyberbullying.us](http://www.cyberbullying.us)). Chapter authors represent a carefully selected group of contributors who have demonstrated both topical expertise and an ability to write about the topic in clear, easily accessible language. This book is appropriate for teachers, administrators, parents and others seeking research-based guidance on how to deal with the rising tide of cyberbullying issues. It is also appropriate for a variety of college level courses dealing with school

violence and educational administration.

*Preventing Bullying Through Science, Policy, and Practice* - National Academies of Sciences, Engineering, and Medicine 2016-09-14

Bullying has long been tolerated as a rite of passage among children and adolescents. There is an implication that individuals who are bullied must have "asked for" this type of treatment, or deserved it. Sometimes, even the child who is bullied begins

to internalize this idea. For many years, there has been a general acceptance and collective shrug when it comes to a child or adolescent with greater social capital or power pushing around a child perceived as subordinate. But bullying is not developmentally appropriate; it should not be considered a normal part of the typical social grouping that occurs throughout a child's life. Although bullying behavior endures through generations, the milieu is changing. Historically, bullying has occurred at school, the physical setting in which most of childhood is centered and the primary source for peer group formation. In recent years, however, the physical setting is not the only place bullying is occurring. Technology allows for an entirely new type of digital electronic aggression, cyberbullying, which takes place through chat rooms, instant messaging, social media, and other forms of digital electronic communication.

Composition of peer groups, shifting demographics, changing societal norms, and modern technology are contextual factors that must be considered to understand and effectively react to bullying in the United States. Youth are embedded in multiple contexts and each of these contexts interacts with individual characteristics of youth in ways that either exacerbate or attenuate the association between these individual characteristics and bullying perpetration or victimization. Recognizing that bullying behavior is a major public health problem that demands the concerted and coordinated time and attention of parents, educators and school administrators, health care providers, policy makers, families, and others concerned with the care of children, this report evaluates the state of the science on biological and psychosocial consequences of peer victimization and the risk and protective factors that either increase or decrease

peer victimization behavior and consequences.

**Handbook of Research on Cyberbullying and Online Harassment in the Workplace** - Ramos Salazar,

Leslie 2020-10-23

Given users' heavy reliance of modern communication technologies such as mobile and tablet devices, laptops, computers, and social media networks, workplace cyberbullying and online harassment have become escalating problems around the world. Organizations of all sizes and sectors (public and private) may encounter workplace cyberbullying within and outside the boundaries of physical offices. Workplace cyberbullying affects the entire company, as victims suffer from psychological trauma and mental health issues that can lead to anxiety and depression, which, in turn, can cause absenteeism, job turnover, and retaliation. Thus, businesses must develop effective strategies to prevent and resolve such

issues from becoming too large to manage. The Handbook of Research on Cyberbullying and Online Harassment in the Workplace provides in-depth research that explores the theoretical and practical measures of managing bullying behaviors within an organization as well as the intervention strategies that should be employed. The book takes a look at bullying behavior across a variety of industries, including government and educational institutions, and examines social and legislative issues, policies and legal cases, the impact of online harassment and disruption of business processes and organizational culture, and prevention techniques. Featuring coverage on a broad range of topics such as sexual abuse and trolling, this book is ideally designed for business managers and executives, human resource managers, practitioners, policymakers, academicians, researchers, and students.

**Preventing School Bullying** - John Pitts 1995

This report describes an initiative to reduce bullying in four schools - two secondary and two primary - in Liverpool and London. All had a high level of violent and anti-social behaviour both in the schools and the surrounding areas. Bengali and black students appeared to be disproportionately

victimised and students usually lacked the confidence to report bullying incidents. The researchers worked with the staff and students to produce an anti-bullying code of practice and implementation strategy with support at all levels. Other measures included : improved supervision/surveillance of play areas; confidential contact for victims and others concerning bullying; meetings about bullying between staff and parents; 1 class rules against bullying; roleplaying and using literature which highlights the plight of scapegoated groups and individuals; 1 formal confrontations of bullies; use of 'neutral' students to help; and discussion groups for parents of students who bully or are bullied. In two years the level of bullying had decreased in three of the schools and remained about the same in the London secondary school.

**Prevention of Youth Violence and Associated Risk Behaviors** - Corinne David-Ferdon 2018-06-04

Youth violence is a significant public health problem that affects thousands of young people each day, and in turn, their families, schools, and communities. Youth violence occurs when young people between the ages of 10 and 24 years intentionally use physical force or power to threaten or harm others. This illustrated technical package provides an overview about youth violence and evidence-based strategies for community leaders, families, school administrators, teachers, law enforcement, and state leaders to utilize as methods for youth violence prevention. Some example strategies include: Preschool enrichment with family engagement and parent education Mentoring/After School programs Hospital community partnership programs Youth volunteer opportunities While individual skills are important

and research has demonstrated the preventive effects of many youth skill development programs, approaches addressing relationships with parents, peers, and other caring adults as well as approaches that influence school and community environments are equally important to have the greatest public health impact. Building Capacity to Reduce Bullying - National Research Council 2014-08-26

Bullying - long tolerated as just a part of growing up - finally has been recognized as a substantial and preventable health problem. Bullying is associated with anxiety, depression, poor school performance, and future delinquent behavior among its targets, and reports regularly surface of youth who have committed suicide at least in part because of intolerable bullying. Bullying also can have harmful effects on children who bully, on bystanders, on school climates, and on society at large. Bullying can occur at all ages, from before elementary school to after high school. It can take the form of physical violence, verbal attacks, social isolation, spreading

rumors, or cyberbullying. Increased concern about bullying has led 49 states and the District of Columbia to enact anti-bullying legislation since 1999. In addition, research on the causes, consequences, and prevention of bullying has expanded greatly in recent decades. However, major gaps still exist in the understanding of bullying and of interventions that can prevent or mitigate the effects of bullying. Building Capacity to Reduce Bullying is the summary of a workshop convened by the Board on Children, Youth, and Families of the Institute of Medicine and National Research Council in April 2014 to identify the conceptual models and interventions that have proven effective in decreasing bullying, examine models that could increase protective factors and mitigate the negative effects of bullying, and explore the appropriate roles of different groups in preventing bullying. This report reviews research

on bullying prevention and intervention efforts as well as efforts in related areas of research and practice, implemented in a range of contexts and settings, including schools, peers, families, communities, laws and public policies, and technology. Building Capacity to Reduce Bullying considers how involvement or lack of involvement by these sectors influences opportunities for bullying, and appropriate roles for these sectors in preventing bullying. This report highlights current research on bullying prevention, considers what works and what does not work, and derives lessons learned.

Research Anthology on School Shootings, Peer Victimization, and Solutions for Building Safer Educational Institutions - Management Association, Information Resources 2020-09-10

Though decades ago school shootings were rare events, today they are becoming normalized.

Active shooter drills have become more commonplace as pressure is placed on schools and law enforcement to prevent the next attack. Yet others argue the traumatizing effects of such exercises on the students. Additionally, violence between students continues to remain problematic as bullying pervades children's lives both at school and at home, leading to negative mental health impacts and, in extreme cases, suicide. Establishing safer school policies, promoting violence prevention programs, building healthier classroom environments, and providing better staff training are all vital for protecting students physically and mentally. The Research Anthology on School Shootings, Peer Victimization, and Solutions for Building Safer Educational Institutions examines the current sources of violence within educational systems, and it offers solutions on how to provide a safer space for both students and educators alike.

Broken into four sections, the book examines the causes and impacts that peer victimization has on students and how this can lead to further violence and investigates strategies for detecting the warning signs. The book provides solutions that range from policies and programs that can be established to strategies for teaching nonviolence and promoting coexistence in the classroom. Highlighting a range of topics such as violence prevention, school climate, and bullying, this publication is an ideal reference source for school administrators, law enforcement, teachers, government and state officials, school boards, academicians, researchers, and upper-level students who are intent on stopping the persisting and unfortunate problem that is school violence.

**Principles of Cyberbullying Research** - Sheri Bauman 2012-12-20

In 2010, the International Cyberbullying Think Tank was held in order to discuss questions of definition, measurement, and methodologies related to cyberbullying research. The attendees' goal was to develop a set of guidelines that current and future researchers could use to improve the quality

of their research and advance our understanding of cyberbullying and related issues. This book is the product of their meetings, and is the first volume to provide researchers with a clear set of principles to inform their work on cyberbullying. The contributing authors, all participants in the Think Tank, review the existing research and theoretical frameworks of cyberbullying before exploring topics such as questions of methodology, sampling issues, methods employed so far, psychometric issues that must be considered, ethical considerations, and implications for prevention and intervention efforts. Researchers as well as practitioners seeking information to inform their prevention and intervention programs will find this to be a timely and essential resource.

**Bullying and Cyberbullying** - Conor McGuckin  
2016-12-01

Cyberbullying and online victimisation in general are high on the public agenda. As cyber technology continues to evolve, we must consider how best we can support our children and young people in enjoying the benefits that come with the online world, whilst also protecting them from harm. This book provides a timely review and analyses of the international literature on cyberbullying.

Beginning with an overview of the evolution of international research to date, the chapters deal with some of the fundamental issues facing researchers, practitioners, and policymakers. The authors deal with issues such as how best to define cyberbullying, what we currently know about the prevalence of the behaviour, the role of gender in

cyberbullying, and alternative theoretical perspectives. Cross-national research is reviewed with the objective of highlighting the similarities across different nations whilst also emphasising the uniqueness and importance of cultural context when attempting to intervene effectively. Due to the research-evident potential for harm as a consequence of cyberbullying, it is important that we move towards appropriate coping and intervention strategies. Therefore, this book also focuses on effective coping strategies at an individual level and at a societal level, examining issues such as education and legislation in relation to cyberbullying. Furthermore, the contemporary knowledge regarding prevention and intervention is explored, with a number perspectives provided. Ultimately, this book presents a state-of-the-art review of cyberbullying knowledge in 2016 and looks to the future with recommendations for

School Bullying and Mental Health - Helen Cowie  
2017-07-20

Bullying amongst young people is a serious and pervasive problem, and recent rapid advances in electronic communication technologies have provided even more tools for bullies to exploit. School Bullying and Mental Health collates current research evidence and theoretical perspectives about school bullying in one comprehensive volume, identifying the nature and extent of bullying and cyberbullying at school, as well as its impact on children and young people's emotional health and

well-being. There are many negative consequences of bullying, and children and young people who have been victimised often suffer long-term psychological problems, such as increased levels of anxiety, depressive symptoms, social isolation, loneliness and suicidal ideation. Perpetrators of bullying also have a heightened risk of experiencing problems such as anxiety and depression, as well as eating disorders and antisocial behaviour. Founded on rigorous academic research, this important book tackles the negative consequences of bullying, and bullying culture itself, by examining the social and cultural contexts that perpetuate such behaviour from childhood through adolescence and potentially into adulthood. Containing contributions from an international team of authors, this book explores current interventions to prevent and reduce school bullying and to alleviate its negative effects on the mental health of

children and young people. In-depth discussion of the profound implications of this research for researchers, practitioners and policymakers makes this book essential reading for those interested in bullying culture and the mental health and well-being of children and adolescents.

### Bullying - Faye Mishna 2012-09-01

With the increased recognition of the devastating effects of bullying, there is now a tremendous amount of information available on its prevalence, associated factors, and the evaluation data on well known school-wide anti-bullying education, prevention, and intervention programs. Yet numerous complex issues span individual and societal variables---including individual characteristics and vulnerability, peer and family relationships and dynamics, classroom and school milieus, and stigma and discrimination---making the task of understanding, assessing, and responding to bullying on the ground complicated for researchers

and nearly impossible for school-based practitioners. Untangling some of the thorny issues around what causes and constitutes bullying, including how to think differently about overlapping phenomena such as racism, sexism, homophobia, or sexual harassment, Faye Mishna presents an exhaustive body of empirical and theoretical literature in such a way as to be accessible to both students and practitioners. Chapters will equip readers to think critically about contexts, relationships, and risk and protective factors that are unique to individual students and schools, and to effectively assess and design multi-level interventions for a variety of aggressive behaviors. Paying particular attention to emerging types of victimization, such as cyber bullying, and to vulnerable groups, such as LGBTQ youth and students with disabilities, Mishna distills the key elements of successful interventions with both victims and aggressors and includes case

examples and practice principles throughout. The result is an integrated, nuanced synthesis of current and cutting-edge scholarship that will appeal to students, practitioners, and researchers in social work, education, and psychology.

*Cyber Racism and Community Resilience* -

Andrew Jakubowicz 2017-11-12

This book highlights cyber racism as an ever growing contemporary phenomenon. Its scope and impact reveals how the internet has escaped national governments, while its expansion is fuelling the spread of non-state actors. In response, the authors address the central question of this topic: What is to be done? *Cyber Racism and Community Resilience* demonstrates how the social sciences can be marshalled to delineate, comprehend and address the issues raised by a global epidemic of hateful acts against race. Authored by an inter-disciplinary team of researchers based in Australia, this book presents

original data that reflects upon the lived, complex and often painful reality of race relations on the internet. It engages with the various ways, from the regulatory to the role of social activist, which can be deployed to minimise the harm often felt. This book will be of particular interest to students and academics in the fields of cybercrime, media sociology and cyber racism.

**Educator Stress** - Teresa Mendonça McIntyre

2017-08-28

This book brings together the most current thinking and research on educator stress and how education systems can support quality teachers and quality education. It adopts an occupational health perspective to examine the problem of educator stress and presents theory-driven intervention strategies to reduce stress load and support educator resilience and healthy school organizations. The book provides an international perspective on key

challenges facing educators such as teacher stress, teacher retention, training effective teachers, teacher accountability, cyber-bullying in schools, and developing healthy school systems. Divided into four parts, the book starts out by introducing and defining the problem of educator stress internationally and examining educator stress in the context of school, education system, and education policy factors. Part I includes chapters on educator mental health and well-being, stress-related biological vulnerabilities, the relation of stress to teaching self-efficacy, turnover in charter schools, and the role of culture in educator stress. Part II reviews the main conceptual models that explain educator stress while applying an occupational health framework to education contexts which stresses the role of organizational factors, including work organization and work practices. It ends with a proposal of a dynamic integrative theory of

educator stress, which highlights the changing nature of educator stress with time and context. Part III starts with the definition of what constitute healthy school organizations as a backdrop to the following chapters which review the application of occupational health psychology theories and intervention approaches to reducing educator stress, promoting teacher resources and developing healthy school systems. Chapters include interventions at the individual, individual-organizational interface and organizational levels. Part III ends with a chapter addressing cyber-bullying, a new challenge affecting schools and teachers. Part IV discusses the implications for research, practice and policy in education, including teacher training and development. In addition, it presents a review of methodological issues facing researchers on educator stress and identifies future trends for research on this topic, including the use

of ecological momentary assessment in educator stress research. The editors' concluding comments reflect upon the application of an occupational health perspective to advance research, practice and policy directed at reducing stress in educators, and promoting teacher and school well-being.
