Sea Trial - Captain Donald E. Bodron 2018-04-25

Sea Trial brings the reader along on a very detailed odyssey ranging from the authors days as a merchant marine cadet at a state maritime academy in the early sixties to his more-than-a-quarter century of service with the US Coast Guard both on board the ship and in the marine safety program. Written by a licensed merchant marine engineer, the point of view of this book is one that is rarely seen: someone speaking from the deck plates in the boiler room rather than the traditional view from the bridge. The book details various voyages, safety inspections, casualties, fires, repairs, oil spills, and sea trials that occurred during that time. It is a look at the work of hundreds of Coast Guard sailors and Marine Inspection personnel whose story rarely, if ever, gets told.

**The Earthmover Encyclopedia** - Keith Haddock 2007

"This colossal reference book documents the timeless urge to reshape the world, and the machines used to do so from the 1088's to today. From utility tractors and loaders up to the largest diggers and bulldozers, every piece of heavy equipment is listed here by model and manufacturer, making this the most exhaustive book on the world's most hard-working vehicles and machines"--Publisher's description.

**British Opencast Coal: A Photographic History 1942-1985** - Keith Haddock 2015-11-01

British Opencast Coal is an illustrated history of coal mining by surface methods from 1942 to 1985. Written by Keith Haddock, a leading authority on the subject, this book details the origins of the industry and documents the types of earthmoving machines employed during the first 40 years. The book highlights the importance of surface coal mining operations and site restoration and their necessity for the British economy. Meticulously researched, the facts, figures and data covered are taken from Keith's extensive collection of magazine articles, newspaper cuttings and manufacturers' machine brochures and specifications. They are also drawn from publications by the National Coal Board Opencast Executive and Keith's own research conducted on numerous site visits. The sites included represent a cross section of geologically different locations in England, Scotland and Wales, and those employing the most interesting variety of earthmoving machines, such as Maesgwyn in South Wales, Newman Spinney in Derbyshire, Radar North in Northumberland and Ox-Bow in Yorkshire. The book's 364 historical photographs, many taken for the National Coal Board or British Coal Opencast, provide a nostalgic look at obsolete earthmoving and heavy construction equipment, and form an excellent historical resource for the student, researcher or enthusiast.
