Driving Stability Systems - Karl-Heinz Dietsche 2005

The Logan Epic - Bernard Jullien
2013

Innovation isn't what it used to be. Traditionally a synonym for sophistication, hi-tech and expense, today it means seeking frugality, mining segments that the competition has abandoned and accessing new customers whose modest incomes meant they were once ignored. The West used to conceptualise innovation for its

own purposes. Today, it is being developed increasingly for - and soon by - the emerging world. The Logan's adventure epitomises these new innovation trajectories and outlines new frontiers for its industry. The question then becomes how and why a company like Renault chose this path; how it withstood so many surprises and obstacles to become one most spectacular success stories of the early 21st century; and whether this success might destabilise European industrialists' traditional development model. Following an in-depth investigation behind the scenes at Renault and

Dacia, the book's three authors - economists and managers specialised in the automotive industry - provide an answer to these and other questions.

Beyond the automotive sector, the book is also useful to anyone tracking current upheavals in the world's economic equilibrium and interested in how corporate innovation processes might contribute to this trend.

Global Production - Eberhard Abele 2008-01-26

Global production and purchasing operations create a platform for entry into new markets. However, it takes considerable effort to plan and implement a sustainable

globalization strategy; this book will help in that task. The wealth of experience and analysis featured in this book is the result of an extensive survey among leading manufacturing companies as well as countless discussions with executives who have personally wrestled with the issues of "going global."

The book treats the whole range of management challenges. In breadth and depth, the insights it offers surpass what a manager or most individual companies could acquire on their own.

Leadership in Europe - Heller, Johnny 1998-02

Although leadership is obviously a topic with global significance, this special issue has a distinctive European flavor. This

is partly due to the fact that the contributors and editors hail from five European countries, but even the two chapters that describe major cross-national research covering up to 60 countries, concentrate attention on European issues including eastern countries that only moved into the center of Europe six or seven years ago. The justification for inclusion in this special issue is that each report makes a potentially practical contribution to work and organizational psychologists and those working in organizations in the area of Human Resource Management or Consultancy. European psychology has not yet given

leadership anything like the attention it deserves and consequently the contrast with the United States, where this subject is extensively researched, is very noticeable. This special edition may lead to a reassessment of the opportunities and perhaps also act as a stimulus for more applied research to be carried out to engage with the prevalent conditions in Europe. The growth of the European Union and its various harmonization provisions seeks to establish what is often called a 'level playing field' for organizations and this will give leaders in competing enterprises new challenges and new

opportunities. Several contributions in the present special issue begin to relate to these developing areas.

Dependent Growth: Foreign

Investment and the

Development of the Automotive Industry in East-Central Europe

- Petr Pavlínek 2017-04-07

This book offers a critical analysis of recent developments in the automotive industry of East-Central Europe (ECE). Economists, industry specialists and national governments have considered the rapid development of the automotive industry in ECE in the past twenty years an unqualified success. This rapid growth has been based on large inflows of foreign direct investment (FDI) from Western Europe, North America, Japan and South Korea, and it significantly contributed to GDP growth, created thousands of new jobs, and completely transformed the previously existing automotive industry in the region. This

volume offers an analysis that goes beyond uncritical celebratory accounts of this rapid growth. It is based on original, detailed firm-level research conducted by the author in Czechia and Slovakia between 2009 and 2015 that covered assembly firms and the networks of component suppliers. Theoretically and conceptually, the analysis will draw on the global production networks and global value chains perspectives. Drawing on the original empirical data and on additional available information, this volume concentrates on several important questions related to the development of the

automotive industry in ECE in the 2000s. • The role of FDI in the rapid development of the automotive industry after 1990 and particularly in the 2000s. • The upgrading of the automotive industry in East-Central Europe through FDI. • The position of ECE in the automotive industry research and development (R&D). • The effects of the 2008-2009 economic crisis in the automotive industry of ECE. • The role of state in the rapid development of the automotive industry in ECE in the 1990s and 2000s. • The effects of FDI on domestic firms in the form of linkages between foreign-owned and domestic firms and

spillovers from foreign-owned to domestic firms.

Machinery Failure Analysis Handbook - Luiz Octavio

Amaral Affonso 2013-11-25

Understanding why and how failures occur is critical to failure prevention, because even the slightest breakdown can lead to catastrophic loss of life and asset as well as widespread pollution. This book helps anyone involved with machinery reliability, whether in the design of new plants or the maintenance and operation of existing ones, to understand why process equipment fails and thereby prevent similar failures.

Achtung-Panzer! - Heinz Guderian 1995

This is one of the most significant military books of the twentieth century. By an

outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian

campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

The Second Automobile Revolution - M. Freyssenet
2009-04-30

The rapid takeoff of the continent-sized national economies and the increasing expense of extraction have led to strong tensions in petrol prices and a race towards alternative driving systems. This book analyses the emergence

of a second automobile revolution through the trajectories of automobile firms since the nineties.

Private Market Financing -
International Monetary Fund
1995-01-01

This paper reports the growing number of low-income countries that are making efforts to resolve their debt problems, often aided by the resources of the debt reduction facility for countries of the International Development Association (IDA). Progress for most, however, remains slow. With the backing of IDA resources and assistance from official bilateral sources, debt buy-backs have been concluded by Bolivia,

Guyana, Mozambique, Niger, Sao Tome and Principe, Uganda, and Zambia.

Preliminary discussions on similar operations are under way with several other countries. Although most of the major baric debt cases have been resolved, attention still needs to be focused on the problems of low-income countries. In many of these countries, the process of debt restructuring has been delayed owing to economic and political difficulties. To maintain market access on reasonable terms, countries need consistently to implement strong macroeconomic and structural policy programs. Maintenance

of such programs is likely to be particularly important in the period ahead, given the high degree of uncertainty with regard to interest rate movements in the industrial countries.

Gasoline Engine with Direct

Injection - Richard van

Basshuysen 2014-10-01

Direct injection spark-ignition engines are becoming increasingly important, and their potential is still to be fully exploited. Increased power and torque coupled with further reductions in fuel consumption and emissions will be the clear trend for future developments. From today's perspective, the key technologies driving this

development will be new fuel injection and combustion processes. The book presents the latest developments, illustrates and evaluates engine concepts such as downsizing and describes the requirements that have to be met by materials and operating fluids. The outlook at the end of the book discusses whether future spark-ignition engines will achieve the same level as diesel engines.

Fresh from the Farm 6pk - Rigby 2006

Foreign investment in eastern and southern Europe after 2008. - Béla Galgóczi

2015-12-01

This book investigates the role that foreign direct investment (FDI) in central-eastern and southern Europe has played in the post-crisis period, comparing patterns across countries and sectors. An overarching objective of this publication is to assess the extent to which FDI can still be seen as a key driver of economic development, modernisation and convergence for Europe’s low- and middle-income economies, taking into account also the risks and limiting factors associated with FDI.

Plug-in Hybrids - Sherry

Boschert 2006

A politically polarized America is coming together over a new kind of car--the plug-in hybrid that will save drivers money, reduce pollution, and increase US security by reducing

dependence on imported oil.

Plug-in Hybrids points out that, where hydrogen fuel-cell cars won't be ready for decades, the technology for plug-in hybrids exists today. Unlike conventional hybrid cars that can't run without gasoline, plug-in hybrids use gasoline or cheaper, cleaner, domestic electricity--or both. Although plug-in hybrids are not yet for sale, demand for them is widespread, coming from characters across the political spectrum, such as: * Chelsea Sexton, the automotive insider: working for General Motors, Sexton fought attempts to destroy the all-electric EV1 car and describes how car

companies are resisting plug-in hybrids--and why they'll make them -anyway. * Felix Kramer and the tech squad: Kramer started a nonprofit organization using the Internet to tap into a small army of engineers who built the first plug-in Prius hybrids. * R. James Woolsey, former CIA director and national security hawk: seeing the end of oil supplies looming, Woolsey is demanding plug-in hybrids to wean us from petroleum. Cautioning that the oil and auto companies know how to undermine the success of plug-in car programs to protect their interests, the book gives readers tools to ensure that plug-in hybrids get to market--

and stay here.

Twelve Years a Slave -

Solomon Northup 2021-01-01

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into

Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been

suggested that an account of my life and fortunes would not be uninteresting to the public." - an excerpt
