The Future Air Navigation System (FANS) - Vincent P. Galotti 2019-05-23

In view of the increase in air traffic, there has been a great deal of work by the nations of the world, under the auspices of ICAO, toward developing the concept for a future air navigation infrastructure to serve worldwide civil aviation efficiency. Even though the concept is well described and implementation is beginning, only technical manuals are available to advance the systems concept. This book describes the global vision for the Future Air Navigation System (FANS) and is the first text of its kind dedicated solely to Communications Navigation, Surveillance/Air Traffic Management and the CNS/ATM systems concept. In addition to the technical issues associated with CNS/ATM, the book also examines

institutional, economic, labour and Human Factors issues. It is designed as a text usable in the classroom environment in universities and aviation technical schools.

Do you ever wonder why an

aviation communication  
strategy can, in this fast world

The strategies and messages in this book show how to prevent this along with the ultimate safety net used by those who have been successful. Readers will learn to prevent catastrophic communication mistakes with strategic templates for a wide array of scenarios, as well as 25 specific techniques that give the actual words to use to deliver the book's messages.
