Theory-Based Data Analysis for the Social Sciences - Carol S. Aneshensel 2013

This book presents the elaboration model for the multivariate analysis of observational quantitative data. This model entails the systematic introduction of "third variables" to the analysis of a focal relationship between one independent and one dependent variable to ascertain whether an inference of causality is justified. Two complementary strategies are used: an exclusionary strategy that rules out alternative explanations such as spuriousness and redundancy with competing theories, and an inclusive strategy that connects the focal relationship to a network of other relationships, including the hypothesized causal mechanisms linking the focal independent variable to the focal dependent variable. The primary emphasis is on the translation of theory into a logical analytic strategy and the interpretation of results. The elaboration model is applied with case studies drawn from newly published research that serve as prototypes for aligning theory and the data analytic plan used to test it; these studies are drawn from a wide range of substantive topics in the social sciences, such as emotion management in the workplace, subjective age identification during the transition to adulthood, and the relationship between religious and paranormal beliefs. The second application of the elaboration model is in the form of original data analysis presented in two Analysis Journals that are integrated throughout the text and implement the full elaboration model. Using real data, not contrived examples, the text provides a step-by-step guide through the process of integrating theory with data analysis in order to arrive at meaningful answers to research questions.

Methodological Thinking in Psychology - Jaan Valsiner 2010-07-01

In recent years an increasing dissatisfaction with methods and thinking in psychology as a science can be observed. The discipline is operating under the tension between the traditional quantitative and the new qualitative methodologies. New approaches emerge in different fields of psychology and education—each of them trying to go beyond limitations of the mainstream. These new approaches, however, tend to be "historically blind" – seemingly novel ideas have actually been common in some period in the history of psychology. Knowledge of historical trends in that context becomes crucial because analysis of historical changes in psychology is informative regarding the potential of "new/old and forgotten" approaches in the study of psyche. Some approaches in psychology disappeared due to inherent limitations of them; the others disappeared due to purely non-scientific reasons. And some new approaches were rejected long ago for well-justified scientific reasons. This book brings together contributions from leading scholars in different fields of psychology – cognitive psychology, developmental psychology, cultural psychology, methodology of psychology. Each of the contributors discusses methodological issues that were more thoroughly understood

more than half a century ago than they are now. Overall, the contributions support the idea that in important ways 60 years old psychology was far ahead of the most recent trends in mainstream psychology.

The Ph.D. Mindset - Hamid H. Kazeroony 2021-08-01

This book will explain the doctoral journey, the researcher's orientation, personal challenges, and process pathway for successful completion. This book will examine doctoral studies' motivation, build a compelling research argument, decide how to structure a thesis/dissertation, remain on task, and expedite the process while maintaining high-quality standards. This book will explain how a Ph.D. candidate should start the process, stay focused on the tasks, separate passion from the process, understand the challenges, and overcome them. We will explain how a Ph.D. mindset should adjust to the processes rather than entrenched in a passion that may not match the process's realities.
