Madrid, 1931-1934 - Santos Juliá 1984

A los trabajos que sobre la 11 República española ha publicado Santos Juliá se añade ahora este libro que obtuvo el premio "Ortega y Gasset" Villa de Madrid (1982). En él se intenta reconstruir minuciosamente el proceso y los determinantes que convirtieron la fiesta popular con que Madrid celebró la instauración de la República en el abierto enfrentamiento de clases que caracterizó la vida madrileña durante el invierno de 1933-34. A la par, y por el hecho de

reconstruir este proceso en un espacio reducido - una ciudad- aunque sumamente significativo - Madrid-, el autor propone un modelo de interpretación de las luchas de clases urbanas durante la 11 República que, más allá de sus determinantes políticos, tenga en cuenta el propio desarrollo de la ciudad, las transformaciones de su estructura, los procesos migratorios, la crisis que afectó a sus principales industrias, el tipo de sus organizaciones obreras y patronales y, en fin, la dinámica de los discursos y las prácticas de clase. De acuerdo con esos presupuestos metodológicos, el libro concede una atención especial a la fiesta como momento fundante de la República para desembocar, tras el análisis de la cristalización de conciencias enfrentadas de clase, en el estudio de las diferentes formas de lucha de los dos sindicatos obreros y las distintas agrupaciones patronales. El “pueblo todo entero” que aparece como sujeto del primer capítulo del libro se convertirá, durante este corto y denso

proceso, en el “frente obrero” y el “bloqueo patronal” que aparecen radicalmente enfrentados en su última parte. Santos Juliá es profesor del Departamento de Ciencias Políticas y Sociología de la UNED. Ha publicado, en diversas revistas y obras colectivas, una veintena de artículos sobre temas relacionados con la II República y es autor de La izquierda del, PSOE, 1935-36 y de Orígenes del Frente Popular en España, aparecidos en esta misma editorial.

Just Needs a Recharge - Rob Siegel

2018-04-24

Air conditioning in vintage cars often falls into disrepair, as owners figure that it never really worked all that well when it was new, and assume that rejuvenation would be prohibitively expensive. In his new book, *Just Needs a Recharge: The Hack Mechanic Guide to Vintage Air Conditioning*, Rob Siegel details exactly what's needed to resurrect long-dead air conditioning in a vintage car, or install a/c in a car that never had it. In a level of detail not found

in any other automotive a/c book, Rob reveals what you need to know about flare and o-ring fittings, upgrading to a rotary-style compressor and a parallel-flow condenser, making or specifying custom hoses, and selecting refrigerant so that the a/c blows cold enough to be usable. Although the book draws from Rob's BMW experience (with specifics for the BMW 2002 and 3.0CS), and concentrates on vintage a/c systems (those that have flare fittings and originally contained R12), most of the information applies to any air conditioning system, foreign or domestic, vintage or modern. Written in Rob's entertaining Hack Mechanic narrative voice, and including 240 photographs and illustrations, the book covers theory, the choice of refrigerant (R12, R134a, other EPA-approved, non-EPA-approved), legality, tools for a/c work, fittings and sizes, the compressor, the evaporator assembly and expansion valve or orifice tube, the condenser and fan, the receiver/drier or accumulator, electrical connections and

compressor cycling, connecting and using manifold gauges, the basic steps for a/c rejuvenation, from-scratch a/c retrofit, making and installing hoses, flushing the system, pressure-testing and leak detection, evacuating and charging the system troubleshooting, and other things that heat up the cabin.

Embedded Security in Cars - Kerstin Lemke 2006-03-28

Most innovations in the car industry are based on software and electronics, and IT will soon constitute the major production cost factor. It seems almost certain that embedded IT security will be crucial for the next generation of applications. Yet whereas software safety has become a relatively well-established field, the protection of automotive IT systems against manipulation or intrusion has only recently started to emerge. Lemke, Paar, and Wolf collect in this volume a state-of-the-art overview on all aspects relevant for IT security in automotive applications. After an introductory chapter

written by the editors themselves, the contributions from experienced experts of different disciplines are structured into three parts. "Security in the Automotive Domain" describes applications for which IT security is crucial, like immobilizers, tachographs, and software updates. "Embedded Security Technologies" details security technologies relevant for automotive applications, e.g., symmetric and asymmetric cryptography, and wireless security. "Business Aspects of IT Systems in Cars" shows the need for embedded security in novel applications like location-based navigation systems and personalization. The first book in this area of fast-growing economic and scientific importance, it is indispensable for both researchers in software or embedded security and professionals in the automotive industry. *Workshop Manual Discovery* - 2002

Suriname - International Monetary Fund 1997-08-13

This paper reviews economic developments in Suriname during 1994-96. In 1995, there was a major turnaround in Suriname's economic and financial situation following the expansionary fiscal and monetary policies pursued in the first half of the 1990s and the political and economic disruptions of the 1980s. The marked improvement was owing to the restoration of financial discipline, a strengthening of international bauxite prices, and the unification and subsequent stabilization of the exchange rate. The inflation fell further to less than 1 percent in 1996.

Kinship and Marriage in a New Guinea Village - H. Ian Hogbin 2021-01-08

The economic and political systems, legal code and religious beliefs of the people of the New Guinea village of Busama were analysed by H. Ian Hogbin in his earlier work, *Transformation Scene* (1951). In this new study founded on field work carried out at intervals over a seven year period, he is concerned primarily with the individual in his relations with the kinship structure. He takes a typical Busama through a full span of life, from birth through infancy, childhood, adolescence, and marriage to maturity and death; and he shows how each stage in the individual's life involves a change in his kinship relationships and responsibilities. This approach gives the professional anthropologist a set of carefully presented data analysed in line with the

contemporary emphasis on seeing the relations between kin in the context of the local community, and it also offers the general reader an enjoyable and authentic account of the intimacies of Melanesian life.
