Egyptian-Jewish Emigres in Australia -
Racheline Barda 2011

Until the mid 1950s, the Jews of Egypt lived in a multicultural and diverse society, which constituted a model of conviviality and tolerance, using French as its lingua franca. The Jews constituted a respected and well-

integrated urban community of about 80 to 100,000, and made an impressive contribution to the socioeconomic modernization of the country. Together with the rise of Arab nationalism and the growth of Islamic fundamentalism, the escalating Arab-Israeli conflict brought about the rapid demise of Egyptian Jewry. Like the other Jewish communities of Arab lands, these people were either expelled or forced into exile in the aftermath of the 1948, 1956, and 1967 Arab-Israeli wars. As a consequence, close to half of the Jewish population of Egypt found refuge in Israel while the rest dispersed throughout the Western world, mainly in France, Brazil, and the United States. This book focuses on a group of about two thousand who settled in Australia, the "Edge of the Diaspora." It also examines the migration experience of Egyptian Jews who settled in France, in order to compare and contrast their

integration in a non Anglo-Celtic environment. Although the Jews of Egypt, like most refugees, suffered the trauma of dispossession, expulsion, and dislocation, their particular experience did not attract the attention of Australian sociologists or historians. Even within the context of Australian Jewry, their story was largely unknown even though there has been much discussion about the postwar migration of European Jews. The author Racheline Barda believes that it is important to give them a voice, to tell their stories, and delve into their past history, thereby discovering the richness of their cultural heritage which ultimately gave them the tools for a successful integration in Australian society. One of the crucial concerns of this work was the preservation and transmission of the rich and dynamic history of this unique group to successive generations, through the oral testimonies of first-hand witnesses

of a vanished world. This book makes an important contribution to the study of contemporary Australian society as well as diaspora studies. It deals with a topic that has rarely been reported on or studied in Australia--the migration experience of a small and unique ethnoreligious population such as the Jews of Egypt. It is the first comprehensive research on their immigration and integration into Australian society. Traditionally, sociohistorians have mostly concentrated on the Ashkenazi Jews of Europe or on the long established local Jewish community, which was historically of British and German origin. The Jews of Egypt constitute one of the largest Jewish communities to settle in Australia from outside European societies, in response to the rise of Arab nationalism and hostility to Israel. Based on a series of comprehensive interviews conducted mainly in Australia and France, this study reconstructs the

history of a Jewish community and the circumstances of its demise. It takes the innovative approach of systematically analyzing the ethnic, religious, and cultural characteristics of both sample groups, highlighting the diversity that is inherent to the group as a whole. By specifically targeting the issue of identity, it provides an insight into the dynamics of a multilayered identity, which performs as a vehicle of integration and acculturation for a migrant group in any host society. Apart from individuals studying the particular history of Egyptian Jews wherever they settled after their forced emigration from Egypt, the book would be of interest to scholars specializing in diaspora studies, ethnic and immigrant studies, and social history.

Developing Evaluative Judgement in Higher Education - David Boud
2018-04-19

A key skill to be mastered by graduates today is the ability to assess the quality of their own work, and the work of others. This book demonstrates how the higher education system might move away from a culture of unhelpful grades and rigid marking schemes, to focus instead on forms of feedback and assessment that develop the critical skills of its students. Tracing the historical and sociocultural development of evaluative judgement, and bringing together evidence and practice design from a range of disciplines, this book demystifies the concept of evaluative judgement and shows how it might be integrated and encouraged in a range of pedagogical contexts. Contributors develop various understandings of this often poorly understood concept and draw on their experience to showcase a toolbox of strategies including peer learning, self-regulated learning, self-assessment and the

use of technologies. A key text for those working with students in the higher education system, *Developing Evaluative Judgement in Higher Education* will give readers the knowledge and confidence required to promote these much-needed skills when working with individual students and groups.

Tourism and Hospitality - Rafael A. Krebs 2018

In this compilation, the authors investigate factors that stop female participation in leisure cycling using research combining literature on LTPA gender constraints, cycle tourism and cycling in general to contribute to the little existing knowledge of female cycling constraints. The westernized way of understanding culture, marked by Eurocentric defensive self-tropings and policies of world colonization, is addressed and contrasted with that of non-western communities. An essay-review

is presented focusing on the role of alcohol consumption within the rite of hospitality, defining hospitality as, an ancient inter-tribal pact, which ensures the common defence in case of wars and person-exchanges for peace-times. Later, six dimensions of the value of the information obtained in social media by Generation Y travelers were identified in these context of research: the utilitarian value, the risk avoidance, the hedonic value, the sensations felt during the process of search, the value of the interaction with other users, and the perceived congruence between the information obtained in these virtual sources and the identity of the consumer. The authors go on to examine to what extent the adoption of robots to meet with guests and their needs prompts what some scholars deem the death or the end of hospitality. While some scholars lament the introduction of robots, others understand

the trends in leisure and consumption are changing daily. Derridas views on hospitality in relation to unwanted pregnancy are studied, including his views on invitation and visitation. Following this, the authors examine the problem of fragmentation experienced by tourism-applied research in recent years. The socio-economic factors that prevented tourism its matured and stylized form are discussed. In closing, the critical limitations and problems of tourism research today are explored. The authors deliberate on the legacy of French sociology, which centers on a pejorative connotation revolving around tourism in recent decades.

Laboratory Procedures in Clinical Microbiology - J.A. Washington 2012-12-06

Although there are a number of comprehensive books in clinical microbiology, there remains a need for a manual that can be used in the clinical laboratory to guide the daily performance of its work. Most of the existing publications provide detailed and precise information, for example, by which a microorganism can be

characterized and identified beyond any doubt; however, the number of tests involved in this process exceeds the capabilities and resources of most clinical laboratories and are irrelevant for patient care. It is, therefore, necessary in any clinical laboratory to extract from reference manuals, textbooks, and journals those tests and procedures that are to be used to complete the daily workload as efficiently and accurately as possible. It is also essential in the clinical laboratory to determine, on the basis of the kind of specimen being examined, which microorganisms are clinically relevant and require isolation and identification and which should either be excluded selectively or simply regarded as indigenous flora and, therefore, not specifically identified. Cost and time limit a laboratory's resources, and priorities must be established for handling the workload. The procedures described in

the second edition of this manual are those selected by our staff for use in the clinical laboratory on the basis of clinical relevance, accuracy, reproducibility, and efficiency. Alternative procedures, when considered equivalent on the basis of personal or published experience, have been included where appropriate.

Microeconomics - Austan Goolsbee
2015-12-03

Like no other text for the intermediate microeconomics course, Goolsbee, Levitt, and Syverson's *Microeconomics* bridges the gap between today's theory and practice, with a strong empirical dimension that lets students test theory and successfully apply it. With carefully crafted features and vivid examples, Goolsbee, Levitt, and Syverson's text helps answer two critical questions students ask, "Do people and firms really act as theory suggests?" and "How can someone use microeconomics in a practical

way?" The authors teach in economics departments and business schools and are active empirical microeconomics researchers. Their grounding in different areas of empirical research allows them to present the evidence developed in the last 20 years that has tested and refined fundamental theories. Their teaching and professional experiences are reflected in an outstanding presentation of theories and applications.

Didactical Phenomenology of Mathematical Structures - Hans Freudenthal 2006-04-11

The launch of a new book series is always a challenging event not only for the Editorial Board and the Publisher, but also, and more

particularly, for the first author. Both the Editorial Board and the Publisher are delighted that the first author in this series is well able to meet the challenge. Professor Freudenthal needs no introduction to anyone in the Mathematics Education field and it is particularly fitting that his book should be the first in this new series because it was in 1968 that he, and Reidel, produced the first issue of the journal *Educational Studies in Mathematics*.

Breaking fresh ground is therefore nothing new to Professor Freudenthal and this book illustrates well his pleasure at such a task. To be strictly correct the 'ground' which he has broken here is not new, but as with Mathematics as an Educational Task and Weeding and Sowing, it is rather the novelty of the manner in which he has carried out his analysis which provides us with so many fresh perspectives. It is our intention that this new book series should

provide those who work in the emerging discipline of mathematics education with an essential resource, and at a time of considerable concern about the whole mathematics curriculum this book represents just such a resource. questions such as how to get started, how to sell their work, how to promote themselves, and what to do once they are working. For those embarking on freelance careers in illustration or graphic design, the answers have arrived. A twenty-five year veteran in the field, Michael Fleishman, has detailed every business aspect of commercial art in *Starting Your Career as a Freelance Illustrator or Graphic Designer*.

Gender History in Practice - Kathleen Canning 2006

The eight essays collected in this volume examine the practice of gender history and its impact on our understanding of European history. Each essay takes up a major methodological or theoretical issue in feminist history and illustrates the necessity of critiquing and redefining the concepts of body, citizenship, class, and experience through historical case studies. Kathleen Canning opens the book with a new

overview of the state of the art in European gender history. She considers how gender history has revised the master narratives in some fields within modern European history (such as the French Revolution) but has had a lesser impact in others (Weimar and Nazi Germany). *Gender History in Practice* includes two essays now regarded as classics: "Feminist History after the 'Linguistic Turn'" and "The Body as Method"--as well as new chapters on experience, citizenship, and subjectivity. Other essays in the book draw on Canning's work at the intersection of labor history, the history of the welfare state, and the history of the body, showing how the gendered "social body" was shaped in Imperial Germany. The book concludes with a pair of essays on the concepts of class and citizenship in German history, offering critical perspectives on feminist understandings of citizenship. Featuring an

extensive thematic bibliography of influential works in gender history and theory that will prove invaluable to students and scholars, *Gender History in Practice* offers new insights into the history of Germany and Central Europe as well as a timely assessment of gender history's accomplishments and challenges.

Electric Machinery and Transformers -

Irving L. Kosow 1991

Bovine Medicine - Anthony H. Andrews
2008-04-15

Bovine Medicine provides practical and comprehensive information on cattle disease and production and is a key reference for all large animal vets. Since the first edition was published in 1991 there have been significant improvements in disease control and management of cattle. Almost all parts of the book have been updated and completely rewritten. There are new chapters on surgery, embryo transfer, artificial insemination, ethno-veterinary medicine and biosecurity, and a new consolidating chapter on the interaction between the animal, environment, management and disease. The previous edition has sold all over the world, and as a result of this a greater emphasis has been placed on conditions and their treatment in

areas other than temperate regions. A new section entitled "Global Variation in Cattle Practice" has been included with contributors discussing bovine medicine practice in their part of the world. All in all this is an outstanding resource for any practising vet and an excellent reference for veterinary students.

New Science of Learning - Myint Swe Khine
2010-06-16

The earliest educational software simply transferred print material from the page to the monitor. Since then, the Internet and other digital media have brought students an ever-expanding, low-cost knowledge base and the opportunity to interact with

minds around the globe—while running the risk of shortening their attention spans, isolating them from interpersonal contact, and subjecting them to information overload. *The New Science of Learning: Cognition, Computers and Collaboration in Education* deftly explores the multiple relationships found among these critical elements in students' increasingly complex and multi-paced educational experience. Starting with instructors' insights into the cognitive effects of digital media—a diverse range of viewpoints with little consensus—this cutting-edge resource acknowledges the double-edged potential inherent in computer-based education and its role in shaping students' thinking capabilities. Accordingly, the emphasis is on strategies that maximize the strengths and compensate for the negative aspects of digital learning, including: Group cognition as a foundation for learning Metacognitive

control of learning and remembering
Higher education course development using open education resources
Designing a technology-oriented teacher professional development model
Supporting student collaboration with digital video tools
Teaching and learning through social annotation practices
The New Science of Learning: Cognition, Computers and Collaboration in Education brings emerging challenges and innovative ideas into sharp focus for researchers in educational psychology, instructional design, education technologies, and the learning sciences.

[How to Write a Thesis](#) - Umberto Eco
2015-02-27

Umberto Eco's wise and witty guide to

researching and writing a thesis, published in English for the first time. By the time Umberto Eco published his best-selling novel *The Name of the Rose*, he was one of Italy's most celebrated intellectuals, a distinguished academic and the author of influential works on semiotics. Some years before that, in 1977, Eco published a little book for his students, *How to Write a Thesis*, in which he offered useful advice on all the steps involved in researching and writing a thesis—from choosing a topic to organizing a work schedule to writing the final draft. Now in its twenty-third edition in Italy and translated into seventeen languages, *How to Write a Thesis* has become a classic. Remarkably, this is its first, long overdue publication in English. Eco's approach is anything but dry and academic. He not only offers practical advice but also considers larger questions about the value of the thesis-writing

exercise. How to Write a Thesis is unlike any other writing manual. It reads like a novel. It is opinionated. It is frequently irreverent, sometimes polemical, and often hilarious. Eco advises students how to avoid “thesis neurosis” and he answers the important question “Must You Read Books?” He reminds students “You are not Proust” and “Write everything that comes into your head, but only in the first draft.” Of course, there was no Internet in 1977, but Eco's index card research system offers important lessons about critical thinking and information curating for students of today who may be burdened by Big Data. How to Write a Thesis belongs on the bookshelves of students, teachers, writers, and Eco fans everywhere. Already a classic, it would fit nicely between two other classics: Strunk and White and The Name of the Rose. Contents The Definition and Purpose of a Thesis • Choosing the Topic •

Conducting Research • The Work Plan and the Index Cards • Writing the Thesis • The Final Draft

Building Design Portfolios - Sara Eisenman
2006-06-01

Presenting one's portfolio is where every designer begins his or her career. Therefore, crafting a portfolio, whether online or for presentation in person, is an essential skill for survival. Because a portfolio can make or break a career, it is vital that designers go out armed with all the right moves and materials. This book talks both to the professionals who have both designed their own portfolios and those on the other side of the table who have looked at scores of portfolios, to uncover the tips and tricks that have won jobs, as well as the must-avoid moves that have lost opportunities. This book is not only a handbook for dos and don'ts; it also provides plenty of inspiration from a wide

collection of portfolios, both virtual and real-life. This book asks leaders in the field about the real-world realities of presenting one's work for consideration and answers the question, "What sells and what doesn't."

Making and Breaking the Grid - Timothy

Samara 2005-05-01

For designers working in every medium, layout is arguable the most basic, and most important, element. Effective layout is essential to communication and enables the end user to not only be drawn in with an innovative design but to digest information easily. *Making and Breaking the Grid* is a comprehensive layout design workshop that assumes that in order to effectively break the rules of grid-based design, one must first understand those rules and see them applied to real-world projects. Text reveals top designers' work in process and rationale. Projects with similar characteristics are linked through a simple notational system that encourages exploration and comparison of structure ideas. Also included are historical overviews that summarize the development of layout concepts, both grid-based and non-grid based, in modern design practice.
