Richard I - John Gillingham
1999-12-11

Neither a feckless knight-errant nor a king who neglected his kingdom, Richard I was in reality a masterful and businesslike ruler. In this wholly rewritten version of a classic account of the reign of Richard The Lionheart, John Gillingham scrutinizes the reasons for the King's fluctuating reputation over successive centuries and provides a convincing new interpretation of the significance of the reign. This edition includes a complete annotation and expanded bibliography.

Algebraic Aspects of Darboux Transformations, Quantum Integrable Systems and Supersymmetric Quantum Mechanics - Primitivo B. Acosta

Humanez 2012

This volume represents the 2010 Jairo Charris Seminar in Algebraic Aspects of Darboux Transformations, Quantum Integrable Systems and Supersymmetric Quantum Mechanics, which was held at the Universidad Sergio Arboleda in Santa Marta, Colombia. The papers cover the fields of Supersymmetric Quantum Mechanics and Quantum Integrable Systems, from an algebraic point of view. Some results presented in this volume correspond to the analysis of Darboux Transformations in higher order as well as some exceptional orthogonal polynomials. The reader will find an interesting Galois approach to study finite gap potentials.

Hygiene in Food Processing
- H. L. M. Lelieveld
2003-07-25

A high standard of hygiene is a prerequisite for safe food production, and the foundation on which HACCP and other safety management systems depend. Edited and written by some of the world's leading experts in the field, and drawing on the work of the prestigious European Hygienic Engineering and Design Group (EHEDG), *Hygiene in food processing* provides an authoritative and comprehensive review of good hygiene practice for the food industry. Part one looks at the regulatory context, with chapters on the international context, regulation in the EU and the

USA. Part two looks at the key issue of hygienic design. After an introductory chapter on sources of contamination, there are chapters on plant design and control of airborne contamination. These are followed by a sequence of chapters on hygienic equipment design, including construction materials, piping systems, designing for cleaning in place and methods for verifying and certifying hygienic design. Part three then reviews good hygiene practices, including cleaning and disinfection, personal hygiene and the management of foreign bodies and insect pests. Drawing on a wealth of international experience and expertise, *Hygiene in food processing* is a standard work for the food industry in ensuring safe food production. A Concise Introduction to Additives for Thermoplastic Polymers - Johannes Karl Fink 2010-01-05

Describes twenty-one of the most important and commonly used additives A Concise Introduction to Additives for Thermoplastic Polymers focuses on additives for thermoplastic polymers and describes 21 of the most important and

commonly used additives from Plasticizers and Fillers to Optical Brighteners and Anti-Microbial additives. It also includes chapters on safety and hazards, and prediction of service time models. While there are many exhaustive and complex books dealing with additives for polymers, the size of them deter students and many industry engineers from using them. The purpose of this book, therefore, is to fill this void and present a concise introduction to this important subject. Written in an accessible and practical style, the author introduces the reader to the complex subject of plastics additives in an engaging manner. His ability to be concise is the result of his teaching courses on the subject and using his own lecture notes for material. This book comprises the author's course notes so that a larger public can benefit from his knowledge. A Concise Introduction to

Additives for Thermoplastic Polymers is the ideal primer for students who will later work in polymer science or the development of plastics formulation, as well as industry engineers and specialists who want to have a deeper knowledge of the plastics industry.

Transnational Public Governance - M. Warning
2009-08-13

This book explores the work of transnational bureaucracy networks.

These networks address global issues by creating rules - transnational public law - to be incorporated into national legal orders. As classical means fail to legitimize such activities, this book gives a practical account of viable alternative legitimacy mechanisms.

Development of Brushless Self-excited and Self-regulated Synchronous Generating System for Wind and Hydro Generators - Izzat, Likaa Fahmi Ahmed
2013-01-01

In this work, a developed model of brushless synchronous generator of wound rotor type is designed, analyzed by FEM, practically applied and investigated. A comparison of results with conventional machines is also performed. The presented machine can be applied for multi-pole wind/ hydro generators or double-poles diesel-engine generators. It is self-excited by residual magnetism and a connected capacitor. It is also self-regulated by

making use of fluctuations at load or limited speed changes. The generated voltage may last at extended speed range by arranging a generating system with variable capacitance. By eliminating the permanent magnets or advanced manufacturing technology of rotor poles; and without using extra rotating/ external DC exciters, an efficient excitation field and an output of flat self-compensated compound characteristic are obtained. More, the feature of damper windings is determined. Concerning the fact of environmental diminishing of elements in materials of permanent magnets and D.C. Battery, the presented novel machine is hence a good alternative and more economic from generators, exist in the market. Beside, it is safer and highly recommended for power stability when connected to the grid.

Operating Costs of Real Estate - Benjamin Lasshof 2018-08-21

The accurate determination of operating costs and the knowledge of significant influential factors on these costs are crucial foundations for a holistic assessment of planning alternatives during the life cycle of real estate. The quantitative approach of the research study is based on empirical data of operated buildings in Germany. The study is dedicated to the development, validation, and evaluation of statistical models for an investigation

of causal interrelationships between operating costs and a variety of potential influential factors on these costs. The main objective is the provision of essential information, models, and adequate cost indicators for an accurate determination of operating costs for an application in the field of cost planning of real estate. The practical application of the results is demonstrated in detailed implementation examples. The results of the study are directed towards architects, planners, and the real estate management and can serve as the basis for decision making and budgeting.

Gang of Five - Nina Easton 2000

In "Gang of Five, " bestselling author Nina J. Easton reveals the hidden history of American politics in the last thirty years. It's the story of the "other, " less well-known segment of

the baby-boom generation: young conservative activists who arrived on campus in the 1970s in rebellion against everything "sixties" and went on to overturn the political dynamics of our country. "Gang of Five" focuses on the lives and careers of five major figures. BILL KRISTOL, the Harvard-educated intellectual and "Weekly Standard" publisher RALPH REED, the hardball politico and strategist for the Christian right CLINT BOLICK, the constitutional lawyer and "bleeding heart" libertarian GROVER NORQUIST, the anti-tax activist and leader of the so-called vast right-wing conspiracy DAVID McINTOSH, the fresh-faced congressman and architect of the Right's war on regulation "Gang of Five" is a major contribution to contemporary history that explains how we arrived at the politics of today.
