Neuropathology of Drug Addictions and Substance Misuse Volume 3 - Victor R. Preedy 2016-04-25

Neuropathology of Drug Addictions and Substance Misuse, Volume 3: General Processes and Mechanisms, Prescription Medications, Caffeine and Areca, Polydrug Misuse, Emerging Addictions and Non-Drug Addictions is the third of three volumes in this informative series and offers a comprehensive examination of the adverse consequences of the most common drugs of abuse.

Each volume serves to update the reader's knowledge on the broader field of addiction as well as to deepen understanding of specific addictive substances. Volume 3 addresses prescription medications, caffeine, polydrug misuse, and non-drug addictions. Each section provides data on the general, molecular, cellular, structural, and functional neurological aspects of a given substance, with a focus on the adverse consequences of addictions. Research shows that the neuropathological features of one addiction are often applicable to those of others, and understanding these commonalities provides a platform for studying specific addictions in more depth and may ultimately lead researchers toward new modes of understanding, causation, prevention and treatment. However, marshalling data on the complex relationships between addictions is difficult due to the myriad of material and substances. Offers a modern approach to understanding the pathology of substances of abuse, offering an evidence-based ethos for understanding the neurology of addictions Fills an existing gap in the literature by serving as a "one-stop-shopping synopsis of everything to do with the neuropathology of drugs of addiction and substance misuse Includes in each chapter: list of abbreviations, abstract, introduction, applications to other addictions and substance misuse, mini-dictionary of terms, summary points, 6+ figures and tables, full references Offers coverage of preclinical, clinical, and population studies, from the cell to whole organs, and from the genome to whole body
