### **Understanding Second Language Acquisition -**

Lourdes Ortega 2014-02-04  
Whether we grow up with one, two, or several languages during our early years of life, many of us will learn a second, foreign, or heritage language in later years. The field of Second language acquisition (SLA, for short) investigates the human capacity to learn additional languages in late childhood, adolescence, or adulthood, after the first language --in the case of monolinguals-- or languages --in the case of bilinguals-- have already been acquired. Understanding Second Language Acquisition offers a wide-encompassing survey of this burgeoning field, its accumulated findings and

proposed theories, its developed research paradigms, and its pending questions for the future. The book zooms in and out of universal, individual, and social forces, in each case evaluating the research findings that have been generated across diverse naturalistic and formal contexts for second language acquisition. It assumes no background in SLA and provides helpful chapter-by-chapter summaries and suggestions for further reading. Ideal as a textbook for students of applied linguistics, foreign language education, TESOL, and education, it is also recommended for students of linguistics, developmental psycholinguistics, psychology, and cognitive science.

### **Emancipation of a Black**

**Atheist** - D. K. Evans

2017-12-14

Great journeys often start with a single question. For D. K. Evans, a newly married professional in the Christian-dominated South, that question was, "Why Do I Believe in God?" That simple query led him on a years-long search to better understand the nature of religion and faith, particularly as it applies to the Black community. While many taking such a journey today might immerse themselves in the writing of Richard Dawkins, Daniel Dennett, Sam Harris,

and Christopher Hitchens, Evans took inspiration not only from John Henrik Clarke, Yosef-Ben Jochannan, Hubert Harrison, and John G. Jackson, champions of a rich Black tradition of challenging religious orthodoxy, but also from many others in his own community who had similarly come to question their core religious beliefs. While this journey eventually led him to discount the notion of God, he calls on all to ask their own questions, particularly those within the Black community who act on blind faith. While their own journey might not lead to his truth, he acknowledges, that is the only way they will ever emancipate themselves from the truths thrust on them by others and arrive at their most important truth—their own.

This is the first textbook devoted to explaining how recent advances in optimization models, methods and software can be applied to solve problems in computational finance more efficiently and accurately. Chapters discussing the theory and efficient solution methods for all major classes of optimization problems alternate with chapters illustrating their use in modeling problems of mathematical finance. The reader is guided through topics such as volatility estimation, portfolio optimization problems and constructing an index fund, using techniques such as nonlinear optimization models, quadratic programming formulations and integer programming models respectively. The book is based on Master's courses in financial engineering and comes with worked examples, exercises and case studies. It will be

welcomed by applied mathematicians, operational researchers and others who work in mathematical and computational finance and who are seeking a text for self-learning or for use with courses.
