Lemon-Aid Used Cars and Trucks 2012-2013 - Phil Edmonston 2012-05-19

Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More "secret" warranties taken from automaker internal service bulletins and memos than ever.

Hydroforming for Advanced Manufacturing - M Koç 2008-04-25

Hydroforming uses a pressurised fluid to form component shapes. The process allows the manufacture of lighter, more complex shapes with increased strength at lower cost compared to more traditional techniques such as stamping, forging, casting or welding. As a result hydroformed components are increasingly being used in the aerospace, automotive and other industries. This authoritative book reviews the principles, applications and optimisation of this important process. After an introduction, the first part of the book reviews the principles of hydroforming, from equipment and materials to forming processes, design and modelling. The second part of the book reviews the range of hydroforming techniques, the shaping of particular components and the application of hydroforming in aerospace and automotive engineering. With its distinguished editor and team of contributors, Hydroforming for advanced manufacturing is a valuable reference for all those developing and applying this important process. Reviews the principles of hydroforming Explores the range of hydroforming techniques Highlights the application of hydroforming in aerospace and automotive engineering

New Worlds of Work - Ulrich Jürgens 2016-04-15

New industrial centres are emerging in the so-called BRIC countries (Brazil, Russia, India, and China), where large numbers of plants have been constructed in recent years, creating many manufacturing jobs. But what does industrial work look like in these locations? Up until now, much of the interest in developing country industrialization has concentrated on the poor working conditions that characterize some export-oriented sectors in emerging economies, most notoriously in the garment industry. In contrast, the concern of this book is with the modern facilities of multinational or local manufacturers that reflect aspirations for a process of industrial upgrading that might foreshadow the future for these countries. The book provides an analysis of work, its context, and the situation of employees in plants in the BRICs focussing on three main questions: What differences and common features can be ascertained in a comparison both of countries and firms in terms of workplace HR management and production systems? What evidence is there for either a 'high road' or 'low road' developmental path in the BRICs? How are corporate standards implemented in these local contexts? The book addresses an academic audience as well as managers and trade unionists. For the former, it offers a systematic comparison of the four countries and the companies under study. For the latter, it offers a vivid account of challenges the companies face in the BRIC countries as well as the solutions adopted by the companies.

Car - DK 2011-05-02

Decoding China's Car Industry: 40 Years - Anding Li 2021-12-02

This book is an authentic multidimensional history of the car industry in China. 40 years, attempts were made to change the status quo, such as breaking the 220% tariff barrier and setting limits when opening up to international car companies. It was not until the beginning of the 21st century that ordinary people in China started to own cars. This led to rapid growth of the Chinese car industry since the 21st century. However, the industry is facing its biggest challenge due to conflict between China's economic and social values. The author, as a media person chronicling cars in China, has witnessed, experienced, and even participated in the development process of the industry. Weaving in juicy tales, interesting details, and rare pictures, the readers are taken on an exhilarating ride through the story of cars in China.

Materials, Design and Manufacturing for Lightweight Vehicles - P K Mallick 2010-03-01

Research into the manufacture of lightweight automobiles is driven by the need to reduce fuel consumption to preserve dwindling hydrocarbon resources without compromising other attributes such as safety, performance, recyclability and cost. Materials, design and manufacturing for lightweight

vehicles will make it easier for engineers to not only learn about the materials being considered for lightweight automobiles, but also to compare their characteristics and properties. Part one discusses materials for lightweight automotive structures with chapters on advanced steels for lightweight automotive structures, aluminium alloys, magnesium alloys for lightweight powertrains and automotive structures, thermoplastics and thermoplastic matrix composites and thermoset matrix composites for lightweight automotive structures. Part two reviews manufacturing and design of lightweight automotive structures covering topics such as manufacturing processes for light alloys, joining for lightweight vehicles, recycling and lifecycle issues and crashworthiness design for lightweight vehicles. With its distinguished editor and renowned team of contributors, *Materials, design and manufacturing for lightweight vehicles* is a standard reference for practicing engineers involved in the design and material selection for motor vehicle bodies and components as well as material scientists, environmental scientists, policy makers, car companies and automotive component manufacturers. Provides a comprehensive analysis of the materials being used for the manufacture of lightweight vehicles whilst comparing characteristics and properties Examines crashworthiness design issues for lightweight vehicles and further emphasises the development of lightweight vehicles without compromising safety considerations and performance Explores the manufacturing process for light alloys including metal forming processes for automotive applications

Volkswagen Beetle - Edwin Baaske 1997

A cultural history of the Volkswagen Beetle as told through historical photographs, many never before published in the U.S. From the birth of the Beetle in wartime Germany through the development of the New Beetle prototype, *Volkswagen Beetle: Portrait of a Legend* celebrates a lighthearted, unusual view of the most successful automobile in history. This book is not a "how to identify your Beetle" book, nor is it a year-by-year charting of model changes. Rather, through other people's experiences of the car, it allows readers to recall their own fond memories of what it was really like to own a Beetle in its heyday.

Lemon-Aid Used Cars and Trucks 2010-2011 - Phil Edmonston 2010-05-11

"The automotive maven and former Member of Parliament might be the most trusted man in Canada, an inverse relationship to the people he writes about." – The Globe and Mail *Lemon-Aid* shows car and truck buyers how to pick the cheapest and most reliable vehicles from the past 30 years of auto production. This brand-new edition of the bestselling guide contains updated information on secret service bulletins that can save you money. Phil describes sales and service scams, lists which vehicles are factory goofs, and sets out the prices you should pay. As Canada's automotive "Dr. Phil" for over 40 years, Edmonston pulls no punches. His *Lemon-Aid* is more potent and

provocative than ever.

Organizational Cultures of Remembrance - Daniel Mai 2015-05-19

In a business world predominantly oriented toward the future, it has paradoxically become ever more common that companies turn towards their pasts. This book empirically explores the phenomenon of organizational remembrance from a holistic cultural perspective. Based on a twelve-month ethnographic case study conducted at the headquarters of the German automobile company, AUDI AG, this study dissects the relationships between memory, identity, and image in a corporate setting. The greater aim in doing so is twofold: First, this study examines exactly why and how a company officially manages its past in terms of 'history' and 'tradition.' And second, this study scrutinizes what effect organizational remembrance has on the workforce – how it impacts their collective identification with a corporate community and influences their understanding of their daily working life. By investigating the interplay between different stakeholder groups, as well as their practices, media, mental models, and other vehicles of remembrance, an integrated account is offered which makes sense of the complex cultural forces at work in the corporate handling of the past, the present, and the future.

100 Pioneers in Efficient Resource Management - Mario Schmidt 2018-12-04

The book presents about 100 current examples of how energy and materials can be saved in manufacturing companies. They serve to show which measures can be used in modern companies to exploit the potential for resource efficiency. The book is aimed at practitioners in companies and consulting firms, but is also suitable for the university sector as a practical introduction to the topic of resource efficiency. The materials used account for almost 43 percent of the costs of an average industrial company in Germany. Personnel costs, on the other hand, are only 22 percent, while energy costs are as low as 2 percent. If a company wants to save costs, above all it must consider the use of materials and produce in a resource-efficient manner. This simultaneously relieves the environment and reduces dependence on scarce raw materials. The implementation of resource efficiency is not easy. There are indeed numerous starting points in production, often in process innovations or in product development. However, only a few companies publish their measures and savings potentials. In practice, this means that there are often no learning examples in practice, but some of them are explicitly listed in this work. As you can see, resource efficiency in production and products can also be seen as a success factor for many companies. In the project *100 Pioneers in Efficient Resource Management*, committed companies from Baden-Wuerttemberg are showing their solutions. The project was carried out by a competent team from the Pforzheim University and the State Agency for Environmental Technology. Leading trade associations in Baden-Württemberg have supported it.
