The Routledge Companion to Ecstatic Experience in the Ancient World -
Diana Stein 2021-12-31

For millennia, people have universally engaged in ecstatic experience as an essential element in ritual practice, spiritual belief and cultural identification. This volume offers the first systematic investigation of its myriad roles and manifestations in the ancient Mediterranean and Near East. The twenty-nine contributors represent a broad range of scholarly disciplines, seeking answers to fundamental questions regarding the patterns and commonalities of this vital aspect of the past. How was the experience construed and by what means was it achieved? Who was involved? Where and when were rites carried out? How was it reflected in pictorial arts and written records? What was its relation to other components of the sociocultural compact? In proposing

responses, the authors draw upon a wealth of original research in many fields, generating new perspectives and thought-provoking, often surprising, conclusions. With their abundant cross-cultural and cross-temporal references, the chapters mutually enrich each other and collectively deepen our understanding of ecstatic phenomena thousands of years ago. Another noteworthy feature of the book is its illustrative content, including commissioned reconstructions of ecstatic scenarios and pairings of works of Bronze Age and modern psychedelic art. Scholars, students and other readers interested in antiquity, comparative religion and the social and cognitive sciences will find much to explore in the fascinating realm of ecstatic experience in the ancient world.

Medicinal Plants - Halina Maria Ekiert 2021-09-01

Medicinal plant research is an evergreen subject. There is a tremendous increase in popularity of herbal medicine in traditional medicine, ethnomedicine, modern medicine and as over the counter food supplements. Even after this increased demand, supply is neither uniform nor assured as most of these plants are collected from wild. In developing countries of

tropical and subtropical regions where majority of herbal drugs are produced, this is not organised sector making it vulnerable to several malpractices, hence standardization of all aspects required. This has also negative impact on biodiversity and conservation of plants as well as supply of uniform material. This book is aimed to provide up to date information about sustainable use of selected medicinal plants, their active ingredients and efforts made to domesticate them to ensured uniform supply. Development of agrotechnology, biotechnology and cultivation practices using conventional and non-conventional methods are presented. Where these efforts will lead the medicinal plant research and future perspective are discussed. The chapters are written by well recognised group leaders in working in the field. The book contains topics on general biology of medicinal plants, their sustainable use and, cultivation and domestication efforts. A uniform chapter structure has been designed to keep consistency. The book will be useful for academicians, agriculturists, biotechnologists and researcher, and industries involved in manufacturing herbal drugs and supplementary products.

Spagyrics - Manfred M. Junius 2007-02-16

A comprehensive alchemical guide to plant extractions and their health benefits • Shows how spagyric methods “open” medicinal plants completely to release powerful healing properties • Provides a history and philosophy of spagyrics that reveal why Western medicine fails to recognize the full benefit to health offered by plants • Connects spagyrics to classical alchemical, hermetic, and ayurvedic traditions The practice of spagyrics is the application of ancient alchemical working methods to the preparation of tinctures, essences, and other products from medicinal plants. While ordinary tinctures and infusions use only a part of the great curative potential of plants, spagyric methods “open” medicinal plants completely to reveal their more powerful healing properties. Drawing on the rich imagery and symbolism of ancient source materials, Manfred M. Junius describes these methods in great detail,

showing readers how to prepare plant remedies alchemically for their own use as well as imparting a knowledge of the ideological world in which alchemistic and hermetic thought flowered. Spagyrics includes the Plant Magistry of Paracelsus and the Life Elixir recipe of Andreas Libavius among its historic techniques as well as a wealth of scientific information that demonstrates the greater efficacy of alchemical methods of plant essence extraction. This classic source text preserves the nearly forgotten but highly valuable methods of this true hermetic art for preparing natural remedies.

The World of Plants in Renaissance Tuscany - Cristina Bellorini 2016-09-13

In the sixteenth century medicinal plants, which until then had been the monopoly of apothecaries, became a major topic of investigation in the medical faculties of Italian universities, where they were observed, transplanted, and grown by learned physicians both in the wild and in the newly founded

botanical gardens. Tuscany was one of the main European centres in this new field of inquiry, thanks largely to the Medici Grand Dukes, who patronised and sustained research and teaching, whilst also taking a significant personal interest in plants and medicine. This is the first major reconstruction of this new world of plants in sixteenth-century Tuscany. Focusing primarily on the medical use of plants, this book also shows how plants, while maintaining their importance in therapy, began to be considered and studied for themselves, and how this new understanding prepared the groundwork for the science of botany. More broadly this study explores how the New World's flora impacted on existing botanical knowledge and how this led to the first attempts at taxonomy.
