Suicide, Law, and Community in Early Modern Sweden - Riikka Miettinen 2019-02-22

This book explores the judicial treatment of suicides in early modern Sweden, with a focus on the criminal investigation and selective treatment of suicides in the lower courts in the seventeenth and early eighteenth centuries.

Riikka Miettinen shows that reactions and attitudes towards suicides varied considerably despite harsh condemnation by officials. The indictment, investigation, and classification of suspected suicides and the mental state of a person already deceased were challenging, and depended on local co-operation and lay testimonies. Not all suicides were considered alike; a widespread view on the heinousness of suicide was not the same as agreement about specific cases, and did not result in uniform handling of them. The social status and local ties of the deceased influenced the interpretations and responses at the local lower courts and communities. Esteemed local community members had a better defence and greater chance to escape the shameful penalties.

Cases on Challenges Facing E-Learning and National Development - Ugur Demiray 2010

E-Learning offers many opportunities for individuals and institutions all over the world. Individuals can access to education they need almost anytime and anywhere they are ready to. Institutions are able to provide more cost-effective training to their employees. E-learning context is very important. It is common to find educators who perceive e-learning as internet-only education that encourages a static and

content-focused series of text pages on screen. Others envisage the shallow and random online messages that are typical of a social real-time chat session, and wonder how that type of communication could add any value to academic discourse. Some may have experienced e-learning done poorly, and extrapolate their experience into a negative impression of all e-learning. The book will examine the emergence and growth of e-learning. The use of the "e" prefix indicates the application of information and communication technology (ICT) in government, finance, and all forms of socio-economic and community development. This eBook is designed and presented in two volumes. The first volume consists of the country cases of Algeria, Belarus, Bulgaria, Egypt, Estonia, Finland, Greece, Jordan, Hungary, Iraq, Iran, Israel, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Macedonia, Moldova, and Morocco. The second volume gives a place to the country cases of Norway, Oman, Palestine, Poland, Romania,

Russia, Saudi Arabia, Serbia, Slovakia, Slovenia, Sweden, Syria, Tajikistan, Tunisia, Turkey, Ukraine, United Arab Emirates and Uzbekistan. So, the book consists of more than 70 authors from 39 different countries and from 42 universities and 14 institutions with company for all 42 chapters. (Individual chapters contain references.) ["Cases on Challenges Facing E-Learning and National Development: Institutional Studies and Practices. Volume II" was co-edited by Leena Vainio, Mehmet Can Sahin, Gulsun Kurubacak, Petri T. Lounaskorpi, S. Raja Rao, and Carlos Machado. For Volume I, see ED508217.].

Contemporary Empirical Methods in Software Engineering - Michael Felderer
2020-08-27

This book presents contemporary empirical methods in software engineering related to the plurality of research methodologies, human factors, data collection and processing, aggregation and synthesis of evidence, and impact of software engineering research. The

individual chapters discuss methods that impact the current evolution of empirical software engineering and form the backbone of future research. Following an introductory chapter that outlines the background of and developments in empirical software engineering over the last 50 years and provides an overview of the subsequent contributions, the remainder of the book is divided into four parts: Study Strategies (including e.g. guidelines for surveys or design science); Data Collection, Production, and Analysis (highlighting approaches from e.g. data science, biometric measurement, and simulation-based studies); Knowledge Acquisition and Aggregation (highlighting literature research, threats to validity, and evidence aggregation); and Knowledge Transfer (discussing open science and knowledge transfer with industry). Empirical methods like experimentation have become a powerful means of advancing the field of software engineering by providing scientific evidence on software development, operation,

and maintenance, but also by supporting practitioners in their decision-making and learning processes. Thus the book is equally suitable for academics aiming to expand the field and for industrial researchers and practitioners looking for novel ways to check the validity of their assumptions and experiences. Chapter 17 is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.

Anatomy of Writing for Publication for Nurses, Fourth Edition - Cynthia L Saver 2021-01-15
"Writing well is not the result of luck or innate talent. Writing is a skill you can learn, just as you learned nursing skills such as venipuncture and suctioning. However, nurses often find it challenging to write. After all, as Margaret McClure says in *Words of Wisdom From Pivotal Nurse Leaders*, "One of nursing's biggest handicaps is that we are in a field where your basic practice requires that you never write in complete sentences" (Houser & Player, 2008, p.

70). This book is designed to help you bridge the gap between incomplete sentences and a published manuscript. The book's contributors include the best and the brightest from publishing today. Many of the contributors have experience as editors of nursing journals, where their role is to decide which articles to accept for publication. These decision-makers share important insights that will enhance the likelihood your manuscript is accepted for publication. You also can draw a wealth of knowledge from the many years of writing experience that the contributors bring to this book. These authors have a long history of success in having their work published; the important tips they share will set you on track to seeing your work in print or online"--

Mathematics for Machine Learning - Marc Peter Deisenroth 2020-04-23

The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix

decompositions, vector calculus, optimization, probability and statistics. These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics. This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central machine learning methods: linear regression, principal component analysis, Gaussian mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding. Programming tutorials are offered on the book's

web site.

The Rise and Development of Fintech - Robin Teigland 2020-12-18

This comprehensive guide serves to illuminate the rise and development of FinTech in Sweden, with the Internet as the key underlying driver. The multiple case studies examine topics such

as: the adoption of online banking in Sweden; the identification and classification of different FinTech categories; process innovation developments within the traditional banking industry; and the Venture Capital (VC) landscape in Sweden, as shown through interviews with VC representatives, mainly from Sweden but also from the US and Germany, as well as offering insight into the companies that are currently operating in the FinTech arena in Sweden. The authors address questions such as: How will the regulatory landscape shape the future of FinTech companies? What are the factors that will likely drive the adoption of FinTech services in the future? What is the future role of banks in the context of FinTech and digitalization? What are the policies and government initiatives that aim to support the FinTech ecosystem in Sweden? Complex concepts and ideas are rendered in an easily digestible yet thought-provoking way. The book was initiated by the IIS (the Internet Foundation in Sweden), an independent

organization promoting the positive development of the Internet in the country. It is also responsible for the Internet's Swedish top-level domain .se, including the registration of domain names, and the administration and technical maintenance of the national domain name registry. The book illustrates how Sweden acts (or does not act) as a competitive player in the global FinTech arena, and is a vital addition to students and practitioners in the field.

Mental Health Self-Help - Louis D. Brown
2010-08-05

Building on earlier patient-empowerment movements, consumer- and advocate-driven mental health self-help (MHSH) initiatives currently outnumber traditional mental health organizations. At the same time, this apparent success raises significant questions about their short-term efficacy and their value to lasting recovery. Mental Health Self-Help assembles the state of the evidence on the effectiveness of MHSH, beginning with the individual and larger

social factors behind the expansion of consumer-directed services. Clearly organized and accessibly written, the book traces the development and evolution of MSHH as both alternative and adjunct to traditional mental health structures, offers research-based perspectives on the various forms of MSHH, and identifies potential areas for consumer initiatives to work with—and help improve—mental health systems. Contributors weigh strengths and limitations, raise research and methodology questions, and discuss funding and training issues to give readers a deeper understanding of the field and an informed look at its future impact on mental health treatment. Individual chapters cover the spectrum of contemporary self-help initiatives in mental health, including:

- Online mutual aid groups.
- Consumer-run drop-in centers.
- Family and caregiver groups.
- Certified peer support specialists.
- Consumer advocacy initiatives.
- Technical assistance organizations.
- Professional/self-help

collaborations. Mental Health Self-Help is a bedrock guide to an increasingly influential aspect of the mental health landscape. Researchers studying these initiatives from a variety of fields including community and clinical psychology, and public health—as well as clinicians, counselors, social workers, case managers, and policymakers—will find it an indispensable reference.

Skills Strategy Implementation Guidance for Portugal - OECD 2018

Raising skills is critical to Portugal's economic success and social well-being. As globalisation and digitalisation are transforming how people work, how societies function and how individuals interact, Portugal needs to equip its entire population with strong skills so that they can benefit from new opportunities. Portugal has put

education and skills at the forefront of the political agenda for many years, but more than half of adults have not completed upper secondary education. With the population ageing rapidly and a growing skills divide between generations, Portugal needs to further strengthen its adult-learning system. To make change happen, Portugal will need a clear vision for the adult-learning system and a strong partnership between all stakeholders - all levels of government, education and training providers, employers, trade unions, the non-profit sector and learners. This report outlines areas where the accessibility, flexibility and quality of the adult-learning system can be improved, where governance and financing mechanisms can be strengthened, and provides examples of international and national good practice to help achieve these objectives. The report provides a series of concrete actions to help Portugal improve the adult-learning system and in turn enhance economic growth and social cohesion.
