A Comprehensive Guide to Child Psychotherapy and

Counseling - Christiane Brems 2008-03-19

Christiane Brems, an experienced clinician, supervisor, and educator, presents a metatheoretical yet practical guide to working with children ages 3 to 12 years. She draws heavily on developmental, interpersonal, family systems, and self-psychological schools of thought and integrates the core components of all of these approaches in a clear and concise manner. She stresses the need for intensive assessment to precede conceptualization and treatment planning so that treatment techniques are dictated by the needs of each child and family. Brems has contoured the third edition to meet the practical needs and expectations of students and practitioners. Divided among four sections, the chapters follow the logical development of clinicians, mirroring the natural flow of work with children from the practitioners self-exploration, to learning about special aspects of children (such as diversity and development), to awareness about the special needs and demands of children as related to environmental, legal, and ethical issues. Brems prepares clinicians to discover their own personal traits that may facilitate or hinder their work with children. She walks child therapists and counselors through the initial stages of intake, assessment, and conceptualization. The material on assessment instruments is thoroughly updated; discussions refer to the latest versions of instruments, and if new instruments emerged that meet one of the purposes deemed essential to child treatment, they are included. The text contains case examples, each illustrating a specific therapeutic technique.

Basic Counseling Techniques - Wayne Perry 2008-01-21
Wayne Perry has been a therapist for more than thirty
years, but he still hears the same thing from beginning
counselors and therapists: Yes, I know what the theory
says, but what do I do with this particular client?
Drawing on his decades of experience training marriage
and family therapists, professional counselors, and
pastoral counselors, he answers that question in the
updated edition of his landmark book: Basic Counseling
Techniques. He provides practical suggestions for
setting up the therapy room, using audiovisual recording

equipment, and conducting those first critical
interviews. You'll learn how to: apply nine different
sets of clinical tools; select the appropriate tool for
the appropriate clinical situation; and improve how you
carry out the clinical thinking process. Each chapter
concludes with a "Living into the Lesson" section that
allows you to participate in experiential exercises to
master what you've learned. While designed for
counselors and therapists in the beginning of their
careers, even veterans in the field will find value in
this updated edition.
