[The Humanitarian Engagement of the Church in Nigeria](#) - Emmanuel Ayebome 2019-05

Human dignity, decent life and human rights are effects of extensive humanitarian struggles by a people to achieve reasonable life for all. The possibility of such El Dorado was stalled in the past by unforeseen circumstances and other man-made tribulations in global history. However, these struggles will remain incomplete without a global perspective. Thus, taking the responsibility to understand humanity and her shortfalls in other parts of the globe becomes necessary. This quest consequently triggers the thorough study on how, where and why their plight is intrinsically tied to their social, cultural, religious and political background. Such genuine consequent studies can uproot the causal effect and thus guarantee the success of that developmental slogan of 'helping people to help themselves.' This study attempts to provide a platform that could chart a path towards sustainable answers to basic social questions.

Molluscs as Crop Pests - G. M. Barker 2002-03-21

Mollusc species currently constitute a major threat to sustainable agriculture. This threat is associated with cultivation of new crops, intensification of agricultural production systems and the spread through human trade and travel of species adapted to these modified environments. In some crops their significance is only now becoming apparent with the decline in the importance of other pest groups which can be effectively controlled. The book focuses on: toxicology of chemicals; deployment of molluscicides in baits; specific crop situations worldwide; current pest status of mollusc species and progress towards development of solutions.

[Schistosomiasis in The People's Republic of China: from Control to Elimination](#) - 2016-04-29

Schistosomiasis Control, the latest edition in the Advances in Parasitology series first published in 1963, contains comprehensive and up-to-date reviews on all areas of interest in contemporary parasitology. The series includes medical studies of parasites of major influence, such as Plasmodium falciparum and trypanosomes. The series also contains reviews of more traditional areas, such as zoology, taxonomy, and life history, which help to shape current thinking and applications. The 2014 impact factor is 6.226, with a thematic issue focus on Schistosomiasis Control. Informs and updates on all the latest developments in the field of parasitology Includes medical studies of parasites of major influence, such as Plasmodium falciparum and trypanosomes Contains contributions from leading authorities and industry experts

Biotechnologies at Work for Smallholders - John Ruane 2013

This book documents a unique series of 19 case studies where agricultural biotechnologies were used to serve the needs of smallholders in developing countries. They cover different regions, production systems, species and underlying socio-economic conditions in the crop (seven case studies), livestock (seven) and aquaculture/fisheries (five) sectors. Most of the case studies involve a single crop, livestock or fish species and a single biotechnology. Prepared by scientists and researchers who were directly involved in the initiatives, the authors were able to provide an insider's guide to the background, achievements, obstacles, challenges and lessons learned from each case study.

[Edible Insects](#) - Arnold van Huis 2013

Edible insects have always been a part of human diets, but in some societies there remains a degree of disdain and disgust for their consumption. Although the majority of consumed insects are gathered in forest habitats, mass-rearing systems are being developed in many countries. Insects offer a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide. This publication describes the contribution of insects to food security and examines future prospects for raising

insects at a commercial scale to improve food and feed production, diversify diets, and support livelihoods in both developing and developed countries. It shows the many traditional and potential new uses of insects for direct human consumption and the opportunities for and constraints to farming them for food and feed. It examines the body of research on issues such as insect nutrition and food safety, the use of insects as animal feed, and the processing and preservation of insects and their products. It highlights the need to develop a regulatory framework to govern the use of insects for food security. And it presents case studies and examples from around the world. Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. To fully realise this potential, much work needs to be done by a wide range of stakeholders. This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life, and it will stimulate debate on the expansion of the use of insects as food and feed.

[Risks and Reconstruction](#) - Michael M. Cernea 2000-01-01

This book offers a multidimensional comparative analysis of two large groups of the world's displaced populations : resettlers uprooted by development and refugees fleeing military conflicts or natural calamities. The authors explore common central issues: the condition of being "displaced," the risks of impoverishment and destitution, the rights and entitlements of those uprooted, and, most important, the means of reconstruction of their livelihoods. (Adapté de l'Introduction).

[Small-scale Aquaponic Food Production](#) - Christopher Somerville 2015

This technical paper begins by introducing the concept of aquaponics, including a brief history of its development and its place within the larger category of soil-less culture and modern agriculture. It discusses the main theoretical concepts of aquaponics, including the nitrogen cycle and the nitrification process, the role of bacteria, and the concept of balancing an aquaponic unit. It then moves on to cover important considerations of water quality parameters, water testing, and water sourcing for aquaponics, as well as methods and theories of unit design, including the three main methods of aquaponic systems: media beds, nutrient film technique, and deep water culture. The publication discusses in detail the three groups of living organisms (bacteria, plants and fish) that make up the aquaponic ecosystem. It also presents management strategies and troubleshooting practices, as well as related topics, specifically highlighting local and sustainable sources of aquaponic inputs. The publication also includes nine appendixes that present other key topics: ideal conditions for common plants grown in aquaponics; chemical and biological controls of common pests and diseases including a compatible planting guide; common fish diseases and related symptoms, causes and remedies; tools to calculate the ammonia produced and biofiltration media required for a certain fish stocking density and amount of fish feed added; production of homemade fish feed; guidelines and considerations for establishing aquaponic units; a cost-benefit analysis of a small-scale, media bed aquaponic unit; a comprehensive guide to building small-scale versions of each of the three aquaponic methods; and a brief summary of this publication designed as a supplemental handout for outreach, extension and education.

The Origin and Evolution of New Businesses - Amar V. Bhide 2003-10-16

What is this mysterious activity we call entrepreneurship? Does success require special traits and skills or just luck? Can large companies follow their example? What role does venture capital play? In a field dominated by anecdote and folklore, this landmark study integrates more than ten years of intensive research and modern theories of business and economics. The result is a comprehensive framework for understanding entrepreneurship that provides new and penetrating insights. Examining hundreds of successful ventures, the author finds that the typical business has humble, improvised origins. Well-planned start-ups, backed by substantial venture capital, are exceptional. Entrepreneurs like Bill Gates and Sam Walton initially pursue small, uncertain opportunities, without much capital, market research, or breakthrough technologies. Coping with ambiguity and surprises, face-to-face selling, and making do with second-tier employees is more important than foresight, deal-making, or recruiting top-notch teams. Transforming improvised start-ups into noteworthy enterprises requires a radical shift, from "opportunistic adaptation" in niche markets to the pursuit of ambitious strategies. This requires traits such as ambition and risk-taking that are initially unimportant. Mature corporations have to pursue entrepreneurial activity in a much more disciplined way. Companies like Intel and Merck focus their resources on large-scale initiatives that scrappy entrepreneurs cannot undertake. Their success requires carefully chosen bets, meticulous planning, and the smooth coordination of many employees rather than the talents of a driven few. This clearly and concisely written book is essential for anyone who wants to start a business, for the entrepreneur or executive who wants to grow a company, and for the scholar who wants to understand this crucial economic activity.

Small Animals for Small Farms - R. T. Wilson 2011

"In this booklet ... the focus is on creating awareness and promoting rabbits, rodents and reptiles (the "3 Rs") as viable enterprises for small-scale farmers in rural, peri-urban and urban areas ... This booklet highlights the most important issues in the best use of small animals (rabbits, rodents and reptiles) in the expectation that development workers and policy-makers will recognize and act upon the numerous opportunities such small animals offer. This would not only result in improved livelihoods for producers but also assist in expanding employment and income opportunities in general. The booklet focus on important aspect of this business"--Introduction.

Wildlife and Food Security in Africa - Yaa Ntiamoah-Baidu 1997

One path to solving the food security problem in Africa is to broaden the spectrum of crops cultivated and animals husbanded on the continent to include non-traditional species such as wildlife, and to develop new and innovative production systems to complement the conventional systems. In looking at the role of wildlife in food security in Africa, this publication is concerned not only with the direct contribution of wildlife as a food resource, but also with the influence of wildlife on access to food through employment and income generation, its influence on physical, spiritual and cultural well-being of people. as well as its positive and negative influences on food production capabilities.--Introduction.

Cities and Agriculture - Henk de Zeeuw 2015-09-16

As people increasingly migrate to urban settings and more than half of the world's population now lives in cities, it is vital to plan and provide for sustainable and resilient food systems which reflect this challenge. This volume presents experience and evidence-based "state of the art" chapters on the key dimensions of urban food challenges and types of intra- and peri-urban agriculture. The book provides urban planners, local policy makers and urban development practitioners with an overview of crucial aspects of urban food systems based on an up to date review of research results and practical experiences in both developed and developing countries. By doing so, the international team of authors provides a balanced textbook for students of the growing number of courses on sustainable agriculture, food and urban studies, as well as a solid basis for well-informed policy making, planning and implementation regarding the development of sustainable, resilient and just urban food systems.

Implementing the Water-Energy-Food- Ecosystems Nexus and Achieving the Sustainable Development Goals - Cesar Carmona-Moreno 2021-09-15

The book's primary intention is to serve as a roadmap for professionals working in developing countries interested in the Nexus Water-Energy-Food-Ecosystems (WEFE) approach. The book shows a multi-disciplinary approach, showcasing the importance of the proper use of Nexus WEFE when implementing certain development programs in regions around the globe. It can be presented as a manual for an individual that either wishes to implement intervention projects following the NEXUS approach or students interested in cooperation and development. The book begins with a general explanation of the theoretical concepts and implementation processes of Nexus WEFE and continues getting into case studies, explaining the importance of proper implementation and potential drawbacks and solutions to them. This book has a particular focus on the European Union cooperation policies when implementing such an approach in developing countries.

Resource and Environmental Management - Bruce Mitchell 2013-12-16

This book does an exceptional job in giving an understanding of change, complexity, uncertainty and conflict as well as their linkages, including awareness of strategies, methods and techniques to handle them relative to resource and environmental management. The text enhances the reader's capacity to conduct practice and conduct research in resource and environmental management.

Changing the Face of the Waters - World Bank 2007-06-27

Aquaculture the farming of fish and aquatic plants has become the world's fastest-growing food production sector, even as the amount of wild fish caught in our seas and freshwaters declines. From fish foods and pharmaceuticals to management of entire aquatic ecosystems, aquaculture is truly changing the face of the waters. Increased growth, however, brings increased risk, and aquaculture now lies at a crossroads. One direction points toward the giant strides in productivity, industry concentration, and product diversification. Another direction points toward the dangers of environmental degradation and the marginalization of small fish farmers. Yet another direction invites aquaculture to champion the poor and provide vital environmental services to stressed aquatic environments. 'Changing the Face of the Waters' offers a cutting-edge analysis of the critical challenges facing aquaculture, balancing aquaculture's role in economic growth with the need for sound management of natural resources. The book also provides guidance on sustainable aquaculture by evaluating alternative development pathways, placing particular emphasis on the application of lessons from Asia to Sub-Saharan Africa and Latin America. Aimed at policy makers, planners, and scientists, this book provides a comprehensive frame of reference for orienting ideas and initiatives in this dynamic industry.

Preventing Disease Through Healthy Environments - Annette Prüss-Ustün 2016

"The main message emerging from this new comprehensive global assessment is that premature death and disease can be prevented through healthier environments--and to a significant degree. Analysing the latest data on the environment-disease nexus and the devastating impact of environmental hazards and risks on global health, backed up by expert opinion, this report covers more than 130 diseases and injuries. The analysis shows that 23% of global deaths (and 26% of deaths among children under five) are due to modifiable environmental factors--and therefore can be prevented. Stroke, ischaemic heart disease, diarrhoea and cancers head the list. People in low-income countries bear the greatest disease burden, with the exception of noncommunicable diseases. The report's unequivocal evidence should add impetus to

coordinating global efforts to promote healthy environments--often through well-established, cost-effective interventions. This analysis will inform those who want to better understand the transformational spirit of the Sustainable Development Goals agreed by Heads of State in September 2015. The results of the analysis underscore the pressing importance of stronger intersectoral action to create healthier environments that will contribute to sustainably improving the lives of millions around the world."--Page 4 of cover.

Sustainable Development in Africa - Walter Leal Filho 2021-07-09

This book serves the purpose of documenting and promoting African experiences on sustainable development, which encompasses both, formal and non-formal education. Sustainable development is very important to Africa, but there is a paucity of publication which documents and promotes experiences from African countries. Due to their complexity, the interrelations between social, economic and political factors related to sustainable development, especially at universities, need to be better understood. There is also a real need to showcase successful examples of how African institutions are handling their sustainability challenges. It is against this background that this book has been produced. It is a truly interdisciplinary publication, useful to scholars, social movements, practitioners and members of governmental agencies and private companies, undertaking research and/or executing projects focusing on sustainability from across Africa. As African nations strive to pursue the UN Sustainable Development Goals, it is imperative to cater for the information needs seen across the continent and foster the dissemination of experiences and case studies, which may support both, on-going and future efforts. The scope of the book is deliberately kept wide, and we are looking for contributions across the spectrum of sustainable development from business and economics, to arts and fashion, administration, environment, languages and media studies.
