Positive Learning Environments : Creating and Maintaining Productive Classrooms - John De Nobile 2020-09-21

How do you create a learning environment that's productive; one where students are engaged, learning and happy? And how do you ensure that inappropriate behaviours are kept to a minimum? The second edition of *Positive Learning Environments: Creating and Maintaining Productive Classrooms* introduces the key concepts teachers need to know to create and maintain their classroom as a positive learning environment. It begins by introducing four essential components that are the cornerstones of creating a positive, productive learning environment. These positive practices set readers on the pathway to success and help them establish classrooms that recognise and encourage appropriate behaviours while reducing the probability of inappropriate behaviours. It then examines in turn each of the four main groups of evidence-based approaches to managing student behaviour: behavioural, cognitive behavioural, psychoeducational and social justice approaches. For each it discusses the theories that inform them, their practical applications for fostering appropriate behaviours and also when and how to use them to proactively intervene, if necessary. By the end, readers are empowered to select appropriate theories, approaches and strategies and bring these together to develop their individualised classroom management plan: one that suits their own theoretical beliefs, professional philosophy and teaching style. The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education - National Academies of Sciences, Engineering, and Medicine 2018-07-21

In the United States, broad study in an array of different disciplines — arts, humanities, science, mathematics, engineering — as well as an in-depth study within a special area of interest, have been defining characteristics of a higher education. But over time, in-depth study in a major discipline has come to dominate the curricula at many institutions. This evolution of the curriculum has been driven, in part, by increasing specialization in the academic disciplines. There is little doubt that disciplinary specialization has helped produce many of the achievements of the past century. Researchers in all academic disciplines have been able to delve more deeply into their areas of expertise, grappling with ever more specialized and fundamental problems. Yet today, many leaders, scholars, parents, and students are asking whether higher education has moved too far from its integrative tradition towards an approach heavily rooted in disciplinary "silos". These "silos" represent what many see as an artificial separation of academic disciplines. This study reflects a growing concern that the approach to higher education that favors disciplinary specialization is poorly calibrated to the challenges and opportunities of our time. The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education examines the evidence behind the assertion that educational programs that mutually integrate learning experiences in the humanities and arts with science, technology, engineering, mathematics, and medicine (STEMM) lead to improved educational and career outcomes for undergraduate and graduate students. It explores evidence regarding the value of integrating more STEMM curricula and labs into the academic programs of students majoring in the humanities and arts and evidence regarding the value of

integrating curricula and experiences in the arts and humanities into college and university STEMM education programs.

Recovery of People with Mental Illness: Philosophical and Related Perspectives - Abraham Rudnick 2012-08-30

It is only in the past 20 years that the concept of 'recovery' from mental health has been more widely considered and researched. Before then, it was generally considered that 'stability' was the best that anyone suffering from a mental disorder could hope for. But now it is recognised that, throughout their mental illness, many patients develop new beliefs, feelings, values, attitudes, and ways of dealing with their disorder. The notion of recovery from mental illness is thus rapidly being accepted and is inserting more hope into mainstream psychiatry and other parts of the mental health care system around the world. Yet, in spite of conceptual and other challenges that this notion raises, including a variety of interpretations, there is scarcely any systematic philosophical discussion of it. This book is unique in addressing philosophical issues - including conceptual challenges and opportunities - raised by the notion of recovery of people with mental illness. Such recovery - particularly in relation to serious mental illness such as schizophrenia - is often not about cure and can mean different things to different people. For example, it can mean symptom alleviation, ability to work, or the striving toward mental well-being (with or without symptoms). The book addresses these different meanings and their philosophical grounds, bringing to the fore perspectives of people with mental illness and their families as well as perspectives of philosophers, mental health care providers and researchers, among others. The important new work will contribute to further research, reflective practice and policy making in relation to the recovery of people with mental illness. It is essential reading for philosophers of health, psychiatrists, and other mental care providers, as well as policy makers.

An Introduction to Accounting: Accountability in Organisations and Society

2e - Craig Deegan 2022-10-01

Written by Craig Deegan, Australia's premier sustainability and social accounting academic, An Introduction to Accounting: Accountability in Organisations and Society is the only resource in the market that brings corporate accountability, sustainability, and social responsibility together to provide a unique offering within the introductory accounting market. This text takes a unique approach by embracing from the start the notion of accountability for the environment and sustainability in accounting, providing students with an understanding of accounting's pervasive and transformative role as a social practice and organisational driver. It shows that environments, ideas and values change; the interconnectivity of society; that the planet must be respected as a resource; and that people are affected/influenced by the information they receive and the way it is presented. The text emphasises that accounting and accountability are key aspects of every person's life and that the practice of accounting, while often being seen as very technical in nature, has many social implications. Learning accounting through the lens of sustainability and the environment embeds this perspective in students' minds so that in their careers they will actively seek and use accounting information to make decisions that take into consideration accountability for the environment. Towards the Local Government's Integrated Accountability Framework - Habib Muhammad Shahib 2021-01-29

This book shows the growing phenomenon and the broad impact of socio-environmental conflicts in the grassroots communities—farmers, fishermen and urban poor—in Indonesia, as the effects of government's development strategies based on neoliberal and New Public Management (NPM) views without a clear accountability system or socio-environmental accountability practices and reports are becoming apparent. Inspired by the emancipatory socio-environmental accounting discourse, which focuses on the socio-local context in developing alternative models of accountability based on local views and people's aspirations, this book uses research methodology based on the principles put forth by Indonesian national hero and critical scholar Tan Malaka to develop a framework of integrated accountability for the local government. This book fills the present gap in English publications that analyse the intents and outcomes of the public management reforms in Indonesia with regard to socio-environmental issues, as a basis for further research at the international level as well as policymaking in Indonesia. As the Indonesian government has recently undertaken key structural and accounting reforms in the public sector, this book is a timely and valuable read for graduate students, researchers, and policymakers.
