Fast Track to Waste-Free Manufacturing - John W. Davis 1999-03-19

Manufacturing in the United States is currently undergoing a major transition, yet large numbers of manufacturers simply do not recognize what it is all about. Many still operate under out dated manufacturing practices and do not see that the enemy is not the competition, but rather their own system of production.

Batch, or mass manufacturing is still the preferred system of production for most U.S.-based industry. But to survive, let alone become globally competitive, companies will have to put aside their old mass manufacturing paradigms and completely change their entire production system. WFM will give you step-by-step directions to making rapid, lasting changes.

Davis has created 4 new drivers of WFM and has linked them so you know what order to do them in and when it is time to move to the next driver. He covers nearly every aspect of the lean revolution and provides essential tools and techniques you will need to implement WFM. He also addresses the critical management issues that will arise in any plant that is striving to be world class. Drawing from more than 30 years of manufacturing experience, John Davis gives you

tools and techniques for eliminating anything that cannot be clearly established as value added. WFM is not a theory. It is a proven process, and one the author has successfully implemented. He shares with you from his own experiences in guiding manufacturers through this process. Davis fully details the journey of a factory that moved from mass to waste-free manufacturing in a matter of 24 months. This factory was nationally recognized by wall street analysts as an effective manufacturing model. You get to sit in on their meetings and learn from their triumphs and failures. So hold on to your hat, because you are about to learn how to do what most in the field of world class manufacturing tell you isn't possible: to rapidly deploy WFM and change the system of production. Filled with checklists, an ongoing case study and, most important, strategies that will work, **Fast Track to Waste-Free Manufacturing: Straight Talk from a Plant Manager** will provide you with the principles and methodology for WFM and a road map for its implementation. All you need is the will, the focus, and a sense of urgency about the future of U.S. manufacturing. If you are a plant manager, foreman, supervisor, or executive who wants to quickly transform your factory into a world class manufacturer, Mr. Davis' WFM methodology is "must reading." A 296 minute abridged version of this book is also available on four compact discs or audio cassettes from Productivity Press. **Selected Readings from Wastelands News on Forests** - 2006

Vietnamese State Industry and the Political Economy of Commercial Renaissance - Adam Fforde 2007-02-28

This book is based upon extensive and repeated fieldwork, close observation and familiarity with institutional detail. It traces Vietnam's early attempts to create in State Owned Enterprises (SOEs) a basis for a military-industrial complex, and the ways in which these attempts failed, which explains the nature of state commercialism through the 1980s and into recent years. Since the 1990 breakout to a market economy, Vietnam has shown outstanding development success, with rapid GDP growth, macroeconomic stability, swift poverty reduction, maintenance of social spending and extensive globalisation. Her SOEs have played a major role, not only in showing that performance gains in 1989-91 could compensate for loss of the large Soviet bloc aid program, but also as major players in the rapid economic change of the 1990s, during which the officially reported state share of GDP remained high. By the middle of the 2000s, however, a rising private sector was, in harness with a large presence of foreign companies, sharply increasing pressures upon SOEs. Against this background, the book concludes with an assessment of the extent to which Vietnam's commercialised SOEs are now no longer seen as an effective compromise, but acting as a major hindrance to Vietnam's development. Historical analysis of the process by which Vietnam's SOEs shifted from central-planning to operation in an increasingly globalised market economy Draws upon regular and repeated fieldwork going back to the late 1970s Uses a wide range of Vietnamese language and other sources

Pain Management and the Opioid Epidemic -

National Academies of Sciences, Engineering, and Medicine 2017-09-28

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications.

Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.
