Life Scientific Philosophy, Phenomenology of Life and the Sciences of Life - Anna-Teresa Tymieniecka 2013-03-09

This collection brings to the public the fruits of the groundlaying work on the philosophy/phenomenology of life presented in some 30 volumes of the Analecta Husserliana, and inaugurates a new phase in philosophy/phenomenology - a truly radical turn. As Tymieniecka in her introduction puts it, the time is ripe to abandon the prejudices against empiria and set aside in a 'second position' the epistemological/constitutive criterion of validity and truth - without, however, abandoning it. To the contrary: recognising with our present culture the overwhelmingly superior validity of the pragmaticity test, which science indubitably applies in its 'verification' of technology, philosophy/phenomenology at last reaches the full significance of reality: the fullness of the vital fact of life, which comprises not only the works and enjoyment of the mind and the spirit, but those of the bios and the cosmos too. The full-fledged dialogue with the hard-core sciences opens up; philosophy of life and the human creative condition draws together all the radiations of life into its field of inquiry. Tymieniecka thus proposes a new mathesis universalis - the dream of Leibniz and Husserl - which can at least be fulfilled.

This leaves many confused, not sure what to believe. Indeed, there are always those who try to exploit this confusion. This book explores the causes of the surges, the stories they generate and the relevant science. It does not presuppose in-depth knowledge on the part of the reader, allowing them to become aware of the sciences behind these stories, and to judge them for themselves.
