Assessment in Geographical Education - Theresa Bourke 2022

In recent years there has been increased attention paid to the importance of assessment in Geographical Education, the chosen subject for this book. Assessment is an important tool for collecting information about student learning and

for providing timely data to inform key stakeholders including students, teachers, parents and policymakers. To be effective, assessment needs to be valid, reliable and fair. Validity is about ensuring that we assess what we claim we are assessing. Reliability is about measuring performance and understanding in a consistent way. Without validity and reliability, assessment is unlikely to provide equitable opportunities for students to demonstrate what they know and can do. As geography educators it is therefore important that we identify the core concepts and skills in geography that we want students to master. We need a clear understanding of what the progression of learning looks like for each concept and skill so we can develop fit for purpose assessments that track and improve student learning. While there is a substantial literature on evidence-based assessment in secondary school contexts, research exploring best-practice assessment in geography is rare. This is a concern given the distinctive nature of geography and the important role of assessment in the learning process. This scholarly collection seeks to address this issue by connecting research in educational assessment with the domain of geography. The chapters are written by leading researchers in Geographical Education from across the globe. These chapters provide examples of innovation through the collective voices of geography teacher educator scholars from across Australia, USA, South Korea, Germany, Switzerland and Singapore. What unifies the work in this book, is that each chapter focuses on a key feature of the discipline of geography, providing scholarly examples of evidence-based practices for assessing student's knowledge and skills.

Memorializing 9/11 Outside the USA. Reasons, Functions, and Reactions - Nina Groß 2022-03-29

Seminar paper from the year 2017 in the subject English Language and Literature Studies - Culture and Applied Geography, grade: 1,7, University of Regensburg, language: English, abstract: This term paper focuses on the topic of 9/11 memorials outside the USA and discusses the reasons behind them, their function and the reactions of others. First, an introduction to the subject of memorials and the need for public grieving will be given to provide a theoretical foundation. Here, it will be stated why memorials

became such an important part of our culture and what motivates people to plan and build these monuments. Subsequently, the attention will be drawn to three concrete memorials outside the USA. Their individual previous history will be explained to find out which circumstances led to their building. Finally, it will be discussed which functions memorials outside the US have and why there can also be found a lot of negative response on the part of the general public. One way of dignifying the dead is building memorials. Memorials are an important part of human culture. Not only do they inherit the possibility to express strong emotions like pride, elation, or sorrow, they also serve the purpose of reminding future generations of very glorious or traumatic events of world history. One of the most dramatic incidents of the 21st century surely is the terrorist attack of 9/11 when terrorists were to blame for the lives of almost 3000 human beings. After the first shock had been overcome and after temporary memorials had disappeared from the public places, people thought about creating permanent sites of grieving; a wave of 9/11 memorials spilled over the landscape of the USA. What many people do not know: not only did the Americans project memorials in memory of the terrorist attacks, but also (mostly European) foreign countries planned on building 9/11 memorials.
