Study and Master Life Sciences Grade 11 CAPS Study Guide - Gonasagaren S. Pillay 2014-08-21

*Older People: Improving Health and Social Care* - Bea L. Dijkman 2018-11-11

This contributed volume is based on the "European Core Competences Framework for health and social care professionals working with older people" (ECCF), developed and verified in a unique international cooperation between 26 universities and universities of applied sciences in 25 European countries, part of the European Later Life Active Network (ELLAN). In addition to the framework, the book outlines the necessary qualifications and describes the roles of professionals working with older people in health and social services. It explores healthy ageing for older people from different perspectives and describes the seven roles of health and social care professionals (Expert, Communicator, Collaborator, Organizer, Health and Welfare Advocate, Scholar, and Professional), before going on to define 18 related competences and elaborating them in performance indicators. Beyond the ECCF, the book explains the widely used CanMED role model and puts forward theories to support a client centered and integrated approach on health and social care in order to change attitudes toward older clients and offer better care and support. It also provides health and social care professionals, for example nurses, allied health professionals and social workers with new contextual information and cultural awareness. It gives a voice to students by addressing selected perspectives for professional development. The book includes questions for reflective learning helping to make the book a vital practical instrument for use in the educational context throughout Europe. Europe's ageing populations represent a major challenge for both public health and social care systems. 18% of the population is 65 years old and over, and this proportion will increase in the coming years. As a result, more and more health and social care professionals will work with older people in different settings - at home, in the community, in hospitals or in long-term care settings. Older people, and especially the frail, face a host of interrelated issues, e.g. cognitive restrictions, functional restrictions, psychosocial problems, multimorbidity, polypharmacy and social isolation. These problems call for an integrated approach to health and social care, which this book supplies. It is intended for health and social care professionals, students and educators, for a better understanding of Europe's ageing society and of the impact on care and services. Furthermore, the ECCF offers educational institutes a unique resource for curriculum development, education, training and assessment.

**Life Metaphors** - Catherine Sullivan Norton 1989

How do people survive each day? What keeps them going? Is there a guiding sense of purpose? How do they use the power of

language to cope with ordinary life? Inspired by the works of Studs Terkel and others, Catherine Sullivan Norton conducted a series of interviews with persons who represent a sample of the population effectively coping with life. Over a period of seven months she interviewed forty-six people in a small Midwest town. The twenty-five men and twenty-one women, whose ages range from eighteen to seventy-four, represent many segments of society. Drawing from more than a thousand pages of dialogue, Norton has made their words the key feature of her work. At the heart of this book are the real-life working metaphors people use to give meaning to their lives. Each individual's personal metaphor has the power to articulate what "life is like" for him or her. A trained communicator, Norton began her research with the idea that people use metaphor in their daily lives to help them cope. She soon discovered that people confront life and resolve problems by using powerful metaphors and supportive stories to sustain them. When the interviews were completed Norton was surprised to discover how hard people's lives are, how well they cope, and what clear vision they have. In chapter one Norton specifically asks "How does language help us cope?" It examines the relationship between metaphor and coping, introducing the concept of a life metaphor. Chapter two develops the idea of a life orientation, showing how it fits into this study. The next four chapters describe the life orientations as reflected in the chapter titles: The Antagonist, The Enthusiast, The Fatalist, and The Spectator. In the final chapter Norton offers conclusions drawn from the interviews. In an appendix she explains her methods. School Life - 1936

Educating the Student Body - Committee on Physical Activity and Physical Education in the School Environment 2013-11-13

Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

**Communities in Action** - National Academies of Sciences, Engineering, and Medicine 2017-04-27

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

**Life Sciences, Grade 12** - Gonasagaren S. Pillay 2014-06-26

**Strengthening Forensic Science in the United States** - National Research Council 2009-07-29

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full

account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

*A History of Human Rights Society in Singapore* - Jiyong Song  
2017-05-08

To celebrate Singapore's fiftieth anniversary for its independence from Malaysia in 2015, 35 students, academics and activists came together to discuss and write about pioneering Singaporean human rights activists and their under-reported stories in Singapore. The city-state is known for its remarkable economic success while having strict laws on individual freedom in the name of national security, public order and racial harmony. Singapore's tough stance on human rights, however, does not negate the long and persistent existence of a human rights society that is little known to the world until today. This volume, composed of nine distinctive chapters, records a history of human rights activists, their campaigns, main contentions with the government, survival strategies and other untold stories in Singapore's first 50 years of state-building.

*How People Learn II* - National Academies of Sciences, Engineering, and Medicine 2018-09-27

There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, *How People Learn: Brain, Mind, Experience, and School: Expanded Edition* was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. *How People Learn II: Learners, Contexts, and Cultures* provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. *How People Learn II* will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.

2022-01-01

This open access book is a thorough update and expansion of the 2017 edition of *The Handbook of Salutogenesis*, responding to the rapidly growing salutogenesis research and application arena. Revised and updated from the first edition are background and historical chapters that trace the development of the salutogenic model of health and flesh out the central concepts, most notably generalized resistance resources and the sense of coherence that differentiate salutogenesis from pathogenesis. From there, experts describe a range of real-world applications within and outside health contexts. Many new chapters emphasize intervention research findings. Readers will find numerous practical examples of how to implement salutogenesis to enhance the health and well-being of families, infants and young children, adolescents, unemployed young people, pre-retirement adults, and older people. A dedicated section addresses how salutogenesis helps tackle vulnerability, with chapters on at-risk children, migrants, prisoners, emergency workers, and disaster-stricken communities. Wide-ranging coverage includes new topics beyond health, like intergroup conflict, politics and policy-making, and architecture. The book also focuses on applying salutogenesis in birth and neonatal care clinics, hospitals and primary care, schools and universities, workplaces, and towns and cities. A special section focuses on developments in salutogenesis methods and theory. With its comprehensive coverage, *The Handbook of Salutogenesis, 2nd Edition*, is the standard reference for researchers, practitioners, and health policy-makers who wish to have a thorough grounding in the topic. It is also written to support post-graduate education courses and self-study in public health, nursing, psychology, medicine, and social sciences.

*Parenting Matters* - National Academies of Sciences, Engineering, and Medicine 2016-11-21

Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. *Parenting Matters* identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

#1 NEW YORK TIMES BESTSELLER • A special 25th anniversary edition of the beloved book that changed millions of lives—with a new afterword by the author “A wonderful book, a story of the heart told by a writer with soul.”—Los Angeles Times Maybe it was a grandparent, or a teacher, or a colleague. Someone older, patient and wise, who understood you when you were young and searching, helped you see the world as a more profound place, gave you sound advice to help you make your way through it. For Mitch Albom, that person was Morrie Schwartz, his college professor from nearly twenty years ago. Maybe, like Mitch, you lost track of this mentor as you made your way, and the insights faded, and the world seemed colder. Wouldn't you like to see that person again, ask the bigger questions that still haunt you, receive wisdom for your busy life today the way you once did when you were younger? Mitch Albom had that second chance. He rediscovered Morrie in the last months of the older man's life. Knowing he was dying, Morrie visited with Mitch in his study every Tuesday, just as they used to back in college. Their rekindled relationship turned into one final “class”: lessons in how to live. *Tuesdays with Morrie* is a magical chronicle of their time together, through which Mitch shares Morrie's lasting gift with the world. The Oxford Handbook of Social Psychology and Social Justice - Phillip L. Hammack 2018-02-15

The twentieth century witnessed not only the devastation of war, conflict, and injustice on a massive scale, but it also saw the emergence of social psychology as a discipline committed to addressing these and other social problems. In the 21st century, however, the promise of social psychology remains incomplete. We have witnessed the reprise of authoritarianism and the endurance of institutionalized forms of oppression such as sexism,

racism, and heterosexism across the globe. Edited by Phillip L. Hammack, *The Oxford Handbook of Social Psychology and Social Justice* reorients social psychology toward the study of social injustice in real-world settings. The volume's contributing authors effectively span the borders between cultures and disciplines to better highlight new and emerging critical paradigms that interrogate the very real consequences of social injustice. United in their belief in the possibility of liberation from oppression, with this Handbook, Hammack and his contributors offer a stirring blueprint for a new, important kind of social psychology today.
