Science Teaching Reconsidered - National Research Council 1997-03-12
Effective science teaching requires creativity, imagination, and innovation. In light of concerns about American science literacy, scientists and educators have struggled to teach this discipline more effectively. *Science Teaching Reconsidered* provides undergraduate science educators with a path to understanding students, accommodating their individual differences, and helping them

grasp the methods--and the wonder--of science. What impact does teaching style have? How do I plan a course curriculum? How do I make lectures, classes, and laboratories more effective? How can I tell what students are thinking? Why don't they understand? This handbook provides productive approaches to these and other questions. Written by scientists who are also educators, the handbook offers suggestions for having a greater impact in the classroom and

provides resources for further research.

Sleep Disorders and Sleep Deprivation - Institute
of Medicine 2006-10-13

Clinical practice related to sleep problems and
sleep disorders has been expanding rapidly in the
last few years, but scientific research is not
keeping pace. Sleep apnea, insomnia, and
restless legs syndrome are three examples of

very common disorders for which we have little
biological information. This new book cuts across
a variety of medical disciplines such as
neurology, pulmonology, pediatrics, internal
medicine, psychiatry, psychology, otolaryngology,
and nursing, as well as other medical practices
with an interest in the management of sleep
pathology. This area of research is not limited to
very young and old patientsâ"sleep disorders
reach across all ages and ethnicities. Sleep
Disorders and Sleep Deprivation presents a
structured analysis that explores the following:
Improving awareness among the general public

and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems.

[A Practical Christology for Pastoral Supervision -](#)

Geoff Broughton 2021-03-29

This book sets out a Christological framework for developing and delivering pastoral supervision. Pastoral supervision is a key consideration for any denomination, congregation or faith-based organisation, so this is a vital resource for well-being for clergy, chaplains and the wide array of pastoral workers. Three central Christological themes, the revealing, re-membering and restoring Jesus, provide the theological framework for good supervision practice. The book draws insights from three gospel passages—Luke 24:13–34, Luke 22:39–53 and John 21:1–14—for its Christological themes. The

practical Christology for pastoral supervision is deepened and extended through three theologians: Martin Luther (reformed), Emil Brunner (neo-orthodox) and James McClendon (small B baptist). Professional supervision (coaching, mentoring and spiritual direction) is increasingly sought—even required—by many people in church and faith-based organisations. This book will, therefore, be an excellent resource to theologians interested in supervision, practical theology, and Christology.

Handbook of Reading Research - Michael L. Kamil
2014-04-08

In Volume III, as in Volumes I and II, the classic topics of reading are included--from vocabulary

and comprehension to reading instruction in the classroom--and, in addition, each contributor was asked to include a brief history that chronicles the legacies within each of the volume's many topics. However, on the whole, Volume III is not about tradition. Rather, it explores the verges of reading research between the time Volume II was published in 1991 and the research conducted after this date. The editors identified two broad themes as representing the myriad of verges that have emerged since Volumes I and II were published: (1) broadening the definition of reading, and (2) broadening the reading research

program. The particulars of these new themes and topics are addressed.

Creating Significant Learning Experiences - L.

Dee Fink 2003-06-17

Dee Fink poses a fundamental question for all teachers: "How can I create courses that will provide significant learning experiences for my students?" In the process of addressing this question, he urges teachers to shift from a content-centered approach to a learning-centered approach that asks "What kinds of learning will be significant for students, and how can I create a course that will result in that kind of learning?"

Fink provides several conceptual and procedural tools that will be invaluable for all teachers when designing instruction. He takes important existing ideas in the literature on college teaching (active learning, educative assessment), adds some new ideas (a taxonomy of significant learning, the concept of a teaching strategy), and shows how to systematically combine these in a way that results in powerful learning experiences for students. Acquiring a deeper understanding of the design process will empower teachers to creatively design courses for significant learning in a variety of situations.

The Magic of Language - Thomas Tinnefeld

2020-12-28

Language is magic. This magic happens when new ideas come to our minds or when we come across notions which are new to us, i.e. when we use language productively and construct our own world. The magic (in the productivity) of language works in various linguistic areas, e.g. phonetics, lexicology, phraseology, pragmatics, languages

for specific purposes and multilingualism. In language teaching and learning, this magic comes into effect when language meets content, when we try to adapt our teaching to our learners' needs or when we need to leave our comfort zone to take risks. With contributions by Lizeta Demetriou, Bessie Dendrinou, Olga Dobrunoff, Rashit Emini, Douglas Fleming, Thomas H. Goetz, Ourania Katsara, Bernd Klewitz, Katrin Menzel, Torten Piske, Lea Pöschik, Ronald Kresta, Nikolay Slavkov, Anja Steinlen, and Brikena & Gëzim Xhaferi, this edited volume features articles that cover a

diversity of research findings which deal with the magic of language in various contexts and linguistic settings in Europe, America and Asia.

Bringing Words to Life - Isabel L. Beck
2013-03-14

"Exciting and engaging vocabulary instruction can set students on the path to a lifelong fascination with words. This book provides a research-based framework and practical strategies for vocabulary

development with children from the earliest grades through high school. The authors emphasize instruction that offers rich information about words and their uses and enhances students' language comprehension and production. Teachers are guided in selecting words for instruction; developing student-friendly explanations of new words; creating meaningful learning activities; and getting students involved in thinking about, using, and noticing new words both within and outside the classroom. Many

concrete examples, sample classroom dialogues, and exercises for teachers bring the material to life. Helpful appendices include suggestions for trade books that help children enlarge their vocabulary and/or have fun with different aspects of words"--
