Marvelous Magnetic Machines - H. P. Friedrichs 2020-11

You're standing in front of an old card table in a driveway at a garage sale. On that table is a one-quart aluminum saucepan, a votive candle holder, pieces of some office machinery, and a wooden awards plaque. What do you see there? If you did not answer "a six-cylinder radial electromagnetic attraction motor," then you need this book! H.P. Friedrichs (author of *The Voice of the Crystal and Instruments of Amplification*) returns this time to explore the principles behind the operation and construction of five simple, yet impressive, model electric motors. Aspiring mechanical model makers are often discouraged by their lack of access to machine tools, like mills, lathes, or drill presses. Friedrichs demonstrates that with some basic knowledge, an open eye, and a sharp mind, one can use commonly available (and often discarded) parts and materials to engineer one's way around any lack of expensive machine tooling. In fact, every motor in this book was built from scrap, and can be assembled with hand tools. You'll learn where to hunt for and find materials, and where to salvage suitable bearings. You'll know where useful solenoids can be extracted from scrap, and how to fabricate bobbins to wind your own. You'll learn how to time your motors, fashion a connecting rod, make a commutator from scratch, use a hall effect sensor to detect magnet position, use a transistor as a switch, and much more. Hardcover, 160 pages, 177 photos and illustrations. THE AUTHOR

H.P. Friedrichs is a degreed electrical engineer (BSEE), inventor, and author with more than three decades of experience working in domains ranging from audio, medical, and radio, to software, automotive, and aerospace. At present, he is a Principal Engineer with Honeywell, involved in the design and support of specialized equipment used for testing and validating aircraft power generation products. He has five U.S. patents to his credit and holds three radio licenses including Extra-Class Amateur (AC7ZL), Commercial Radio Operator with Radar Endorsement and GMDSS Operator/Maintainer with Radar Endorsement. He is also a certified VE.

[Prepper Guns](#) - Bryce M. Towsley 2016-05-17

Food, water, and shelter are very important to survival. But you must also be ready to protect what is yours, because if somebody stronger, better prepared, and better equipped takes it all away, you will die. Your family will die. The only way to protect them is with firearms. Written with the law-abiding civilian in mind, *Prepper Guns* covers the firearms and tools needed to survive, not only for defense, but also for foraging. It is a comprehensive look at the realities of the firearms a prepper should have. Written by Bryce M. Towsley, a firearms expert and a full-time gun writer with thirty years of experience, it steps away from the "conventional wisdom" that is often spouted by prepper publishing and takes a hard, honest, look at the reality of the firearms, ammo, tools and training needed to survive at home and on the road. *Prepper Guns* takes a careful look at each category of firearms, ammo, sights, and accessories. Other topics include gun care and maintenance, as well as some simple gunsmithing and reloading to keep firearms repaired and ammo on hand. Finally, *Prepper Guns* has training suggestions and drills, plus a look at the psychology of survival, using the expertise of some of the top people in the world in these fields. If you are worried that bad things are coming and are trying to prepare, this book is the most important piece of gear you can buy. Because if you can't protect your family, your food and your home, nothing else really matters.

The Competitive AR15 - Glen D. Zediker 2010

Death in the Long Grass - Peter Hathaway Capstick 1978-01-15

As thrilling as any novel, as taut and exciting as any adventure story, Peter Hathaway Capstick's *Death in the Long Grass* takes us deep into the heart of darkness to view Africa through the eyes of one of the most renowned professional hunters. Few men can say they have known Africa as Capstick has known it—leading safaris through lion country; tracking man-eating leopards along tangled jungle paths; running for cover as fear-maddened elephants stampede in all directions. And of the few who have known this dangerous way of life, fewer still can recount their adventures with the flair of this former professional hunter-turned-writer. Based on Capstick's own experiences and the personal accounts of his colleagues, *Death in the Long Grass* portrays the great killers of the African bush—not only the lion, leopard, and elephant, but the primitive rhino and the crocodile waiting for its unsuspecting prey, the titanic hippo and the Cape buffalo charging like an express train out of control. Capstick was a born raconteur whose colorful descriptions and eye for exciting, authentic detail bring us face to face with some of the most ferocious killers in the world—underrated killers like the surprisingly brave and cunning hyena, silent killers such as the lightning-fast black mamba snake, collective killers like the wild dog. Readers can lean back in a chair, sip a tall, iced drink, and revel in the kinds of hunting stories Hemingway and Ruark used to hear in hotel bars from Nairobi to Johannesburg, as veteran hunters would tell of what they heard beyond the campfire and saw through the sights of an express rifle.

The New Spruce Forge Manual of Locksmithing - Denis Frechette 2021-08-31

The New Spruce Forge Manual of Locksmithing: a Blacksmith's Guide to Simple Lock Mechanisms is a totally revised, updated and expanded version of the original work which has become a treasured sourcebook for blacksmiths the world over. This new hardcover edition, at 304 pages, is more than double the size of the original manual. The number of lock projects has increased from five to fourteen. And the first section on blacksmith lockmaking tools and techniques can now be considered a complete manual in its own right. The authors have maintained their original trademark style that relies on well-illustrated step-by-step instructions that guide you through the whole lock-making process. They have also kept their low-tech approach that demonstrates how to go about creating good work using only a handful of simple tools. For *The New Spruce Forge Manual of Locksmithing*, Bill Morrison and Denis Frechette divided the book into two distinct sections: **Technical Information:** This section is a complete reference manual that covers the specific techniques needed to build all the parts for each lock, as well as providing all the information needed to understand the assembly instructions outlined in the second section. **The Locks: Patterns and Instructions:** This section provides all the plans and detailed step-by-step instructions for each of the 14 lock projects in this new edition. The detailed and clear assembly instructions describe when and how to use the technical information provided in section one. This is the most complete book available on how to use simple technology to solve complex metalworking problems. What you learn in this book will provide you with the skills needed to replace a broken "blacksmith-lock" with a similar one of your own making for an old gate, door, cabinet, chest, etc. After having worked through the projects you will have gained the skills and confidence to fashion replacement parts for old "blacksmith locks" needing repair. Hardcover, 304 pages, 11-inches x 8-1/2-inches, over 800 color photos and drawings.

The Charcoal Foundry - David J. Gingery 2014-07-09

Charcoal Foundry, the first book in the "Metal Working Shop From Scrap Series", gives you plans for building a metal melting furnace and instructions on basic pattern making and molding. All the information needed to set up a foundry in your work shop can be found in this book. Simply stated, if you can build a sand castle or make a mud pie, you can make a sand mold to produce castings for your metal shop projects. The main ingredient in these projects is scrap aluminum and pot metal. The only tools you need to get started are ordinary home shop hand tools, many of which are probably already in your possession. Much of the remainder is found as salvage or cast-off and little expense need be involved. The charcoal foundry is simple to build and operate and the initial cost is so low that it can be in the reach of nearly anyone. And the fundamentals of pattern-making and molding are easily understood and mastered. Once you have built the charcoal foundry and the metal lathe in book 2, there is little beyond your reach by way of shop equipment. Build as large or small as you wish and you are your own parts supply company. If you already have some machine shop equipment, you will find that adding a foundry to your shop greatly expands your capacity. Being able to produce your own castings for accessories and equipment is a great advantage. Design your own, make a copy or follow a plan. It's easy when you're in control and can produce your own castings.

Big Bucks the Benoit Way - Bryce M. Towsley 2016-04-19

See what it takes to track trophy-sized bucks like the legends do. If there is such a thing as hunting royalty, then the Benoit family is it. They have been raking in trophy-sized bucks since Larry Benoit first began to pioneer his unique tracking methods. As the family grew, so did the Benoit hunting repertoire, expanding beyond simple snow tracking to all-season tracking. Author Bryce M. Towsley had a unique opportunity in the late nineties: to deer hunt with the Benois for an extended period in the deep woods of Maine. He spent time with the Benoit family observing and learning their hunting tactics, techniques, and long-protected secrets. The product of Towsley's inclusion in the Benoit family tradition is *Big Bucks the Benoit Way*.
