Jaws - Sandra Kahn 2018-04-10

There's a silent epidemic in western civilization, and it is right under our noses. Our jaws are getting smaller and our teeth crooked and crowded, creating not only aesthetic challenges but also difficulties with breathing. Modern orthodontics has persuaded us that braces and oral devices can correct these problems. While teeth can certainly be straightened, what about the underlying causes of this rapid shift in oral evolution and the health risks posed by obstructed airways? Sandra Kahn and Paul R. Ehrlich, a pioneering orthodontist and a world-renowned evolutionist, respectively, present the biological, dietary, and cultural changes that have driven us toward this major health challenge. They propose simple adjustments that can alleviate this developing crisis, as well as a major alternative to orthodontics that promises more significant long-term relief. Jaws will change your life. Every parent should read this book.

Sedation - Stanley F. Malamed 2003

This definitive, authoritative clinical manual stands alone in the field of patient sedation. Combining essential theory with technical instruction, it presents "everything in a nutshell" for the practicing professional and student of dentistry. Key factors such as the physical, emotional, and mental condition of the patient - as well as required ADA guidelines - are

incorporated into sedation techniques designed to improve the patient's overall dental experience. The result is an indispensable book, expert in its professional protocols and techniques, and comprehensive in its wide-ranging considerations. Detailed chapters, divided into eight parts, are devoted to topics on: the problem of fear and anxiety in dentistry; pain and anxiety control; pharmacosedation; history and techniques of general anesthesia; inhalation and intravenous sedation, preparation and management of emergencies in the dental office; and sedation for special needs patients - pediatric, geriatric, and medical and physically compromised patients. Written by an acknowledged expert in the field, the book draws on a wealth of clinical experience and ability. Combines all aspects of sedation with essential theoretical and technical instruction. Techniques are divided into sections on pharmacology, armamentarium, and technique and complications - described in explicit detail that allows it to be used as a chairside reference. Pharmacosedation is covered in full, with discussions of oral, rectal, and IM premedication, as well as nine chapters on inhalation sedation and ten chapters on IV sedation. Covers all of the components required by the ADA guidelines: review of cardiovascular and respiratory physiology; selection of agents; techniques of administration; and management of complications and emergencies. Step-by-step descriptions of inhalation sedation (nitrous oxide and oxygen) and intravenous sedation provide a

superb clinical "picture" of the procedures. Chapters on pediatric, geriatric and physically and medically compromised patients offer valuable, up-to-date information on the management of these special needs patients. In-depth discussions of the pharmacology of commonly used sedative agents allow the reader to fully understand properties and characteristics of drugs used. Content has been completely updated to include the most current drug dosage information. More information on recreational abuse of nitrous oxide reflects the current societal trends. The latest American Heart Association recommendations help prevent bacterial endocarditis. Increased emphasis on nitrous oxide/oxygen, as many dental hygienists are becoming certified to administer this form of sedation. New contributors lend credibility and experience to each topic discussed. Content outlines at the beginning of each chapter allow for quick reference of specific topics. Improved illustrations and photographs offer a fresh look, with high-quality art to aid in the visualization of techniques and procedures.
